

Visualize Data with

"The simple graph has brought more information to the data analyst's mind than any other device. "

- John Tukey

Setup

The setup chunk is always run once before anything else

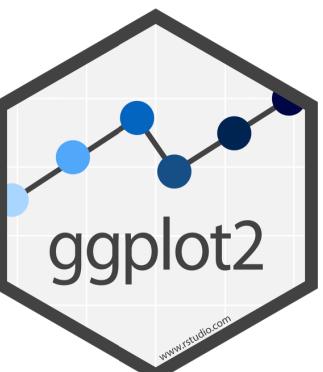

(optional) label for chunk

```
1 ---  
2 title: "Data Visualization"  
3 output: html_notebook  
4 ---  
5  
6 ```{r setup}  
7 library(tidyverse)  
8 ```  
9  
10 ```{r}  
11 mpg  
12  
13  
14  
15 ## Your Turn 1  
16  
17 Run the code on the slide to make a graph. Pay strict attention to  
spelling, capitalization, and parentheses!  
18  
19 ```{r}  
20  
21  
22  
23 ## Your Turn 2  
24  
25 Add `color`, `size`, `alpha`, and `shape` aesthetics to your graph.  
Experiment.  
26  
27 ```{r}  
28 ggplot(data = mpg) +  
29   geom_point(mapping = aes(x = displ, y = hwy))  
30  
31  
32 ## Your Turn 3  
33  
34 Replace this scatterplot with one that draws boxplots. Use the cheatsheet.  
Try your best guess.  
35  
36 ```{r}  
37 ggplot(mpg) + geom_point(aes(class, hwy))  
38  
87:1 | Chunk 11 | R Markdown
```

mpg

Fuel economy data for 38 models of car.

mpg

Quiz

Confer with your neighbours.

What relationship do you expect to see between engine size (displ) and mileage (hwy)?

No peeking ahead!

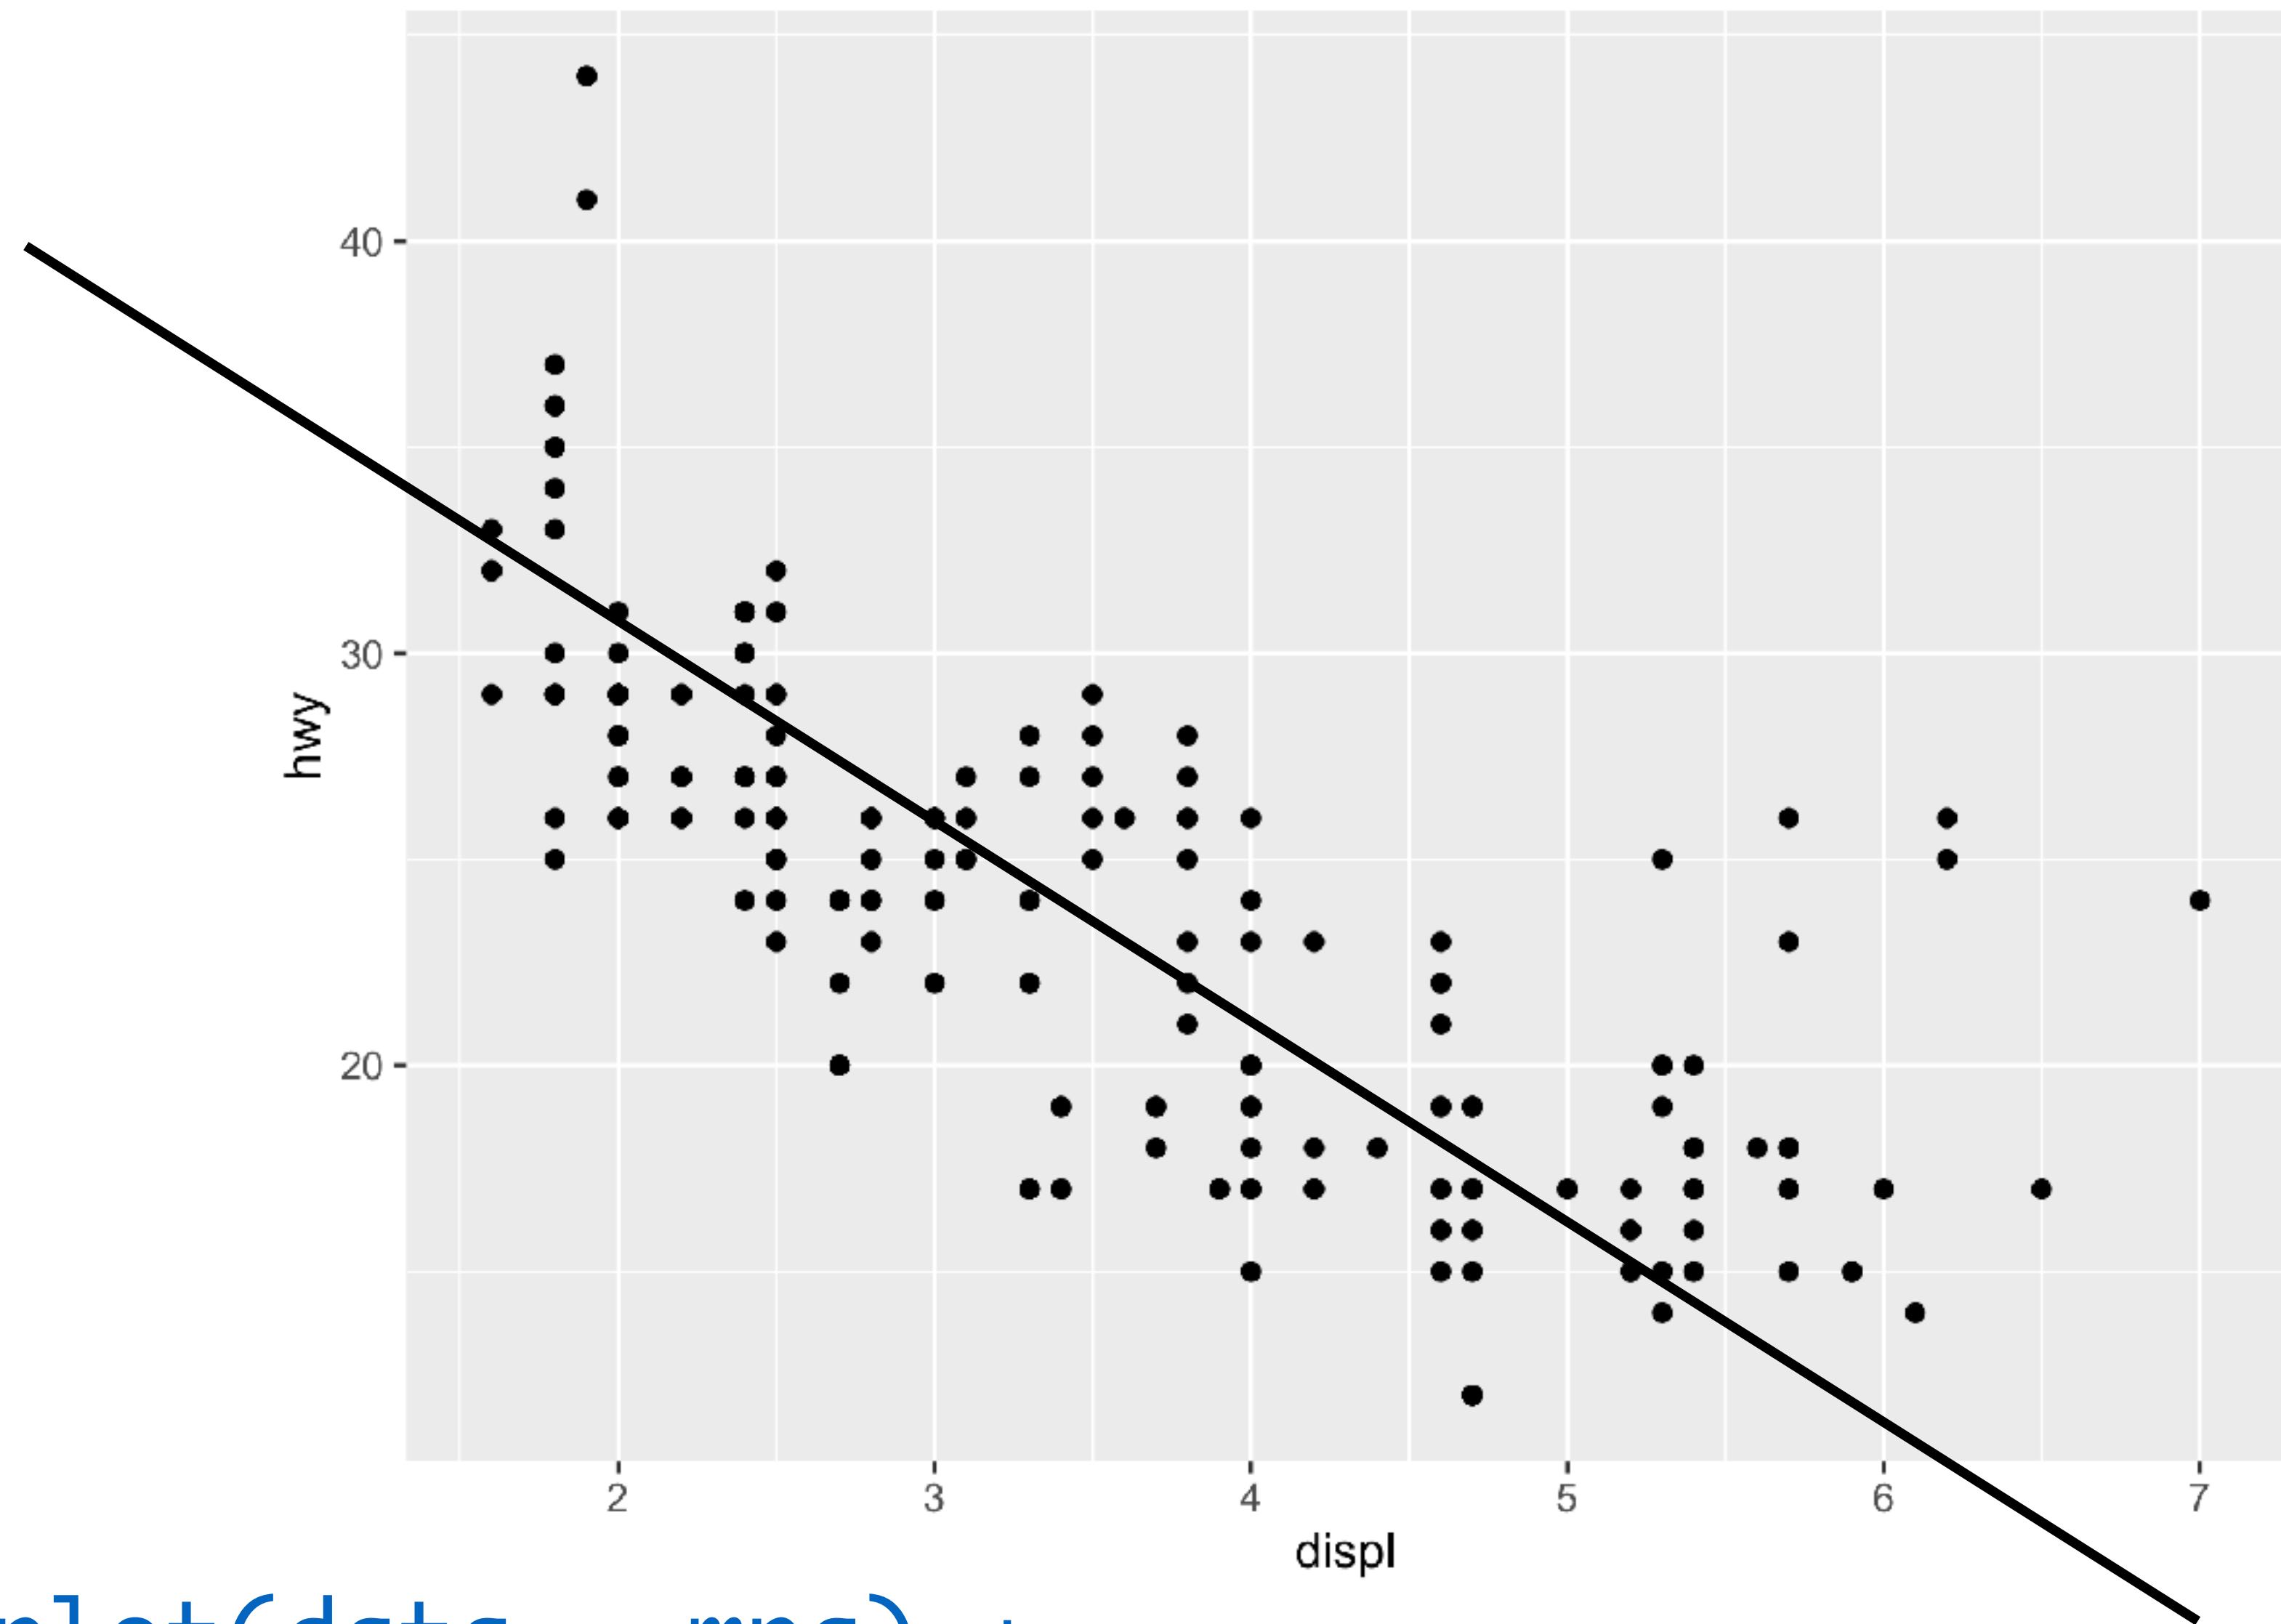

Your Turn 1

Run this code in your notebook to make a graph.

Pay strict attention to spelling, capitalization, and parentheses!

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy))
```

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy))
```

1. "Initialize" a plot with `ggplot()`
2. Add layers with `geom_` functions

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy))
```

Pro tip: Always put the + at the end
of a line, Never at the start

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy))
```

data

+ before new line

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy))
```

type of layer

aes()

x variable

y variable

A template

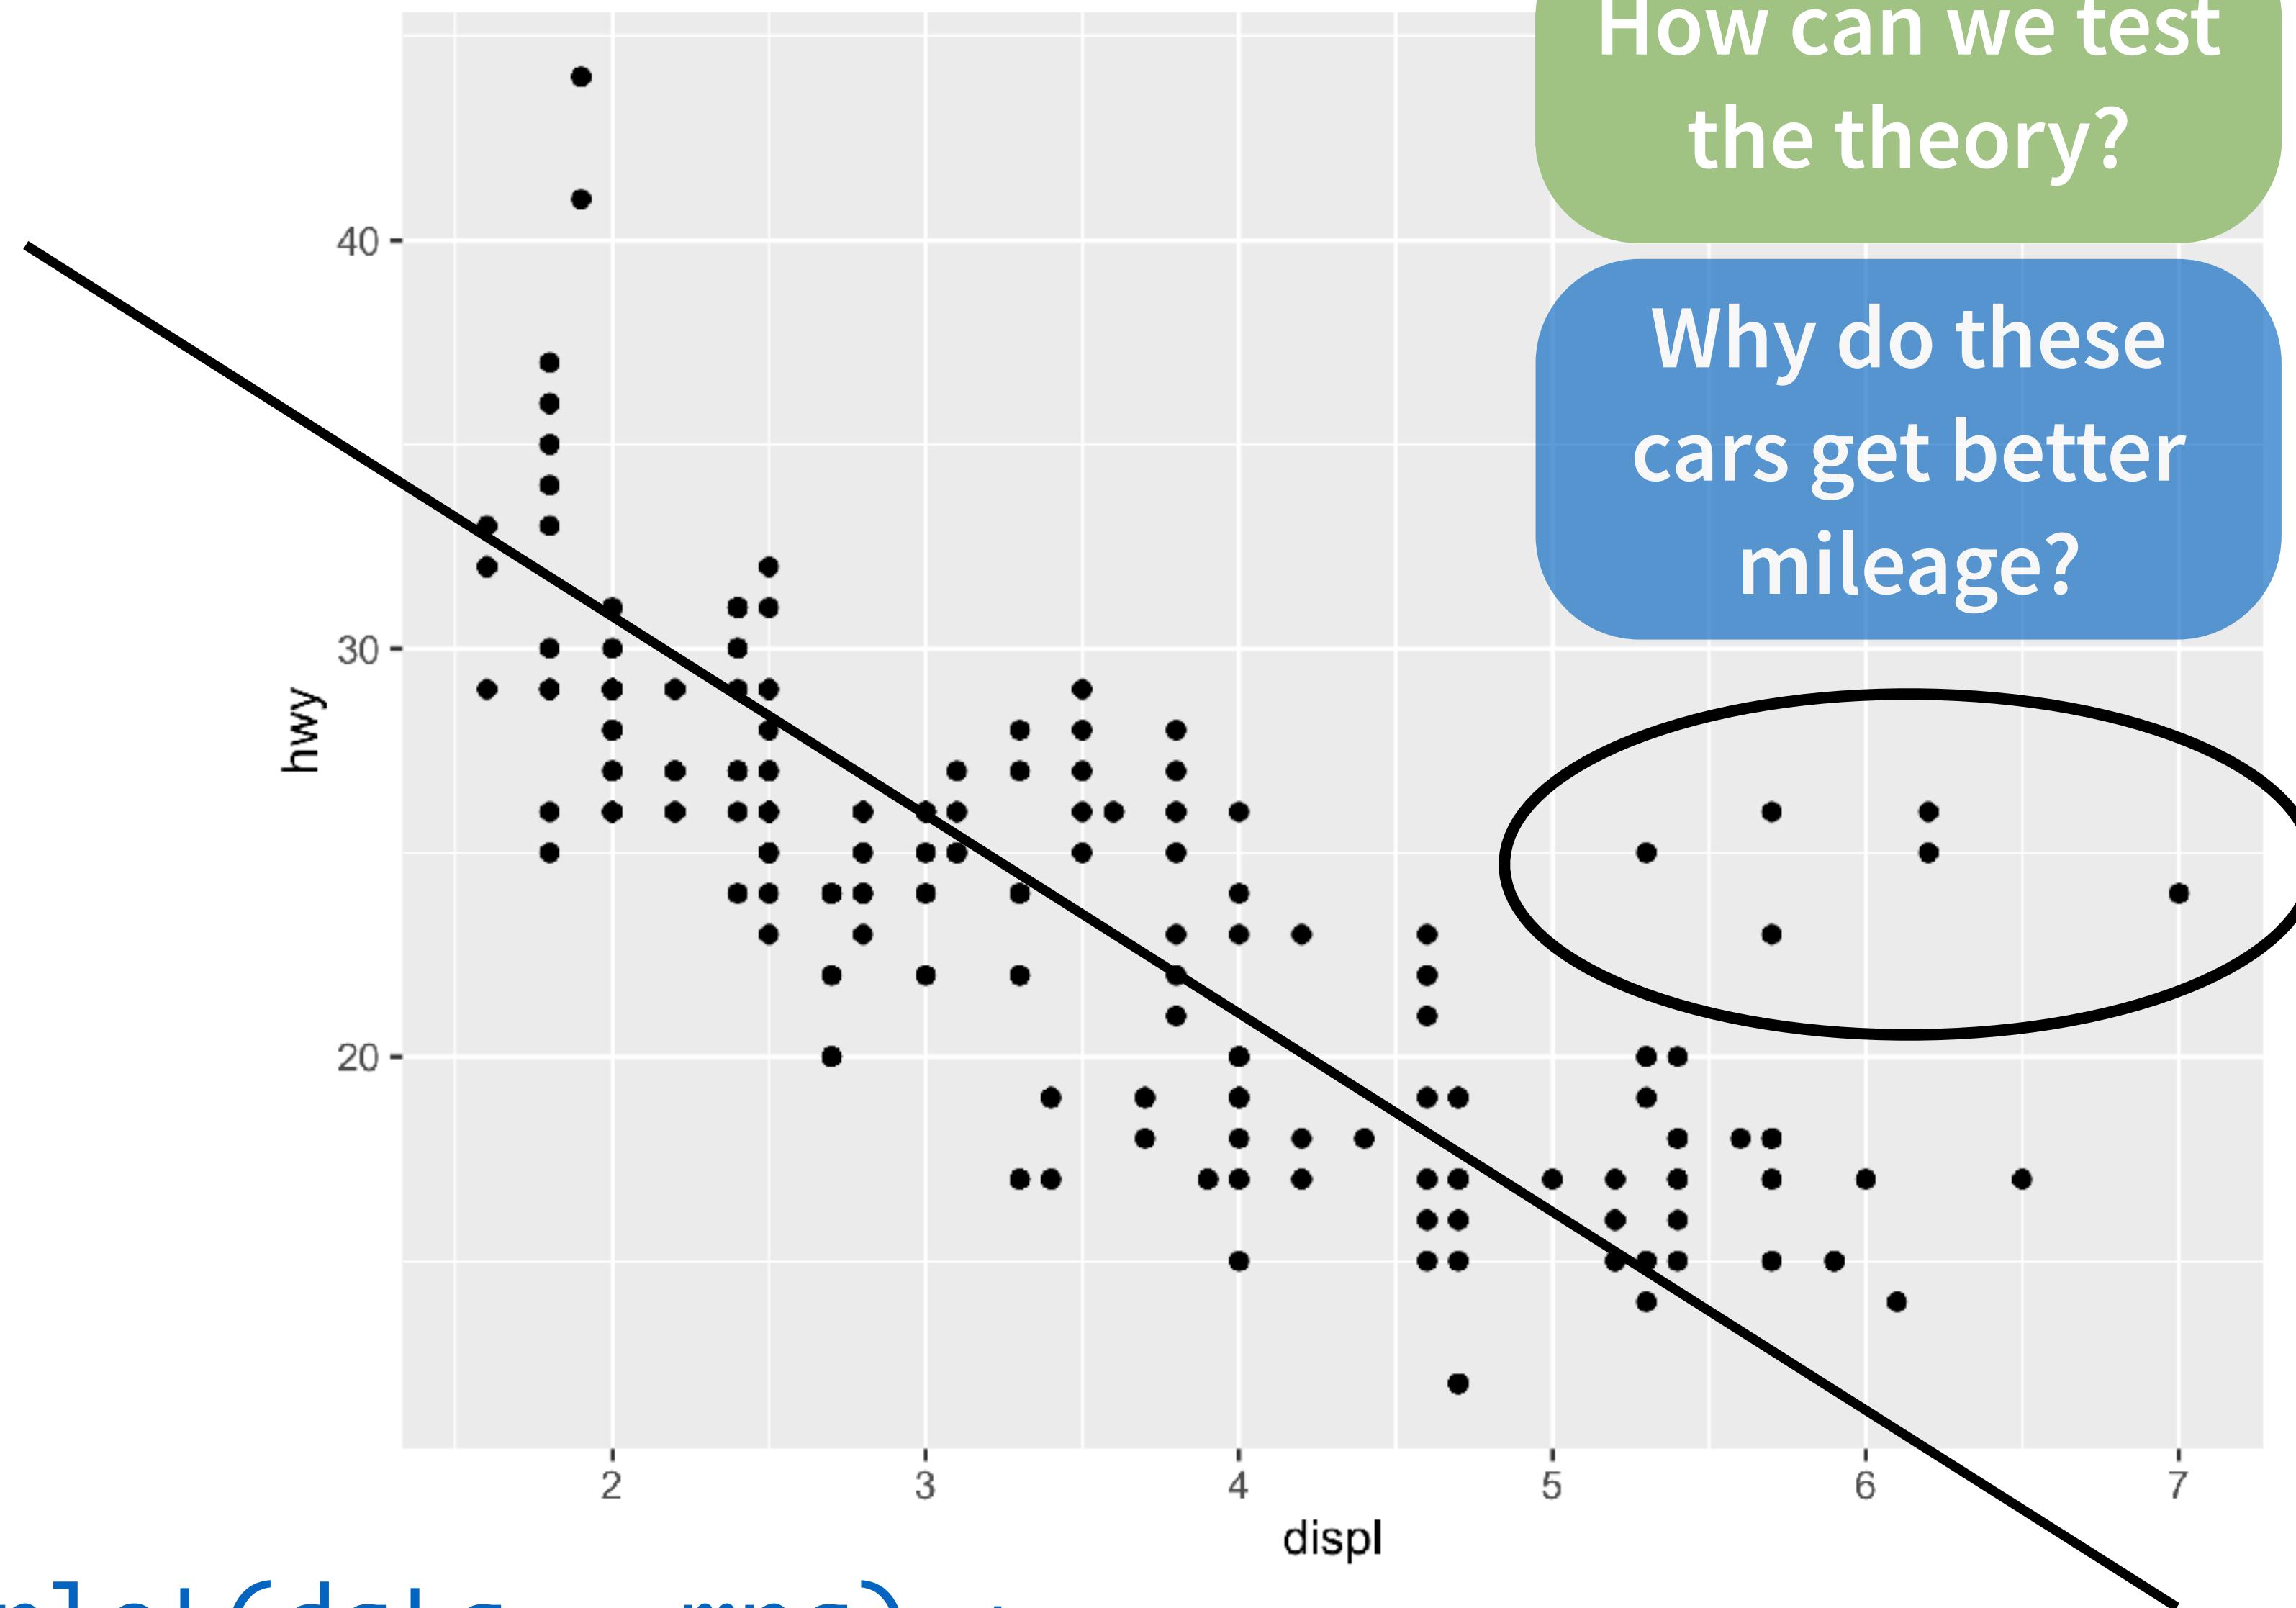

```
ggplot(data = <DATA>) +  
<GEOM_FUNCTION>(mapping = aes(<MAPPINGS>))
```

```
geom_point(mapping = aes(x = displ, y = hwy))
```

A template

```
ggplot(data = <DATA>) +  
<GEOM_FUNCTION>(mapping = aes(<MAPPINGS>))
```

Mappings

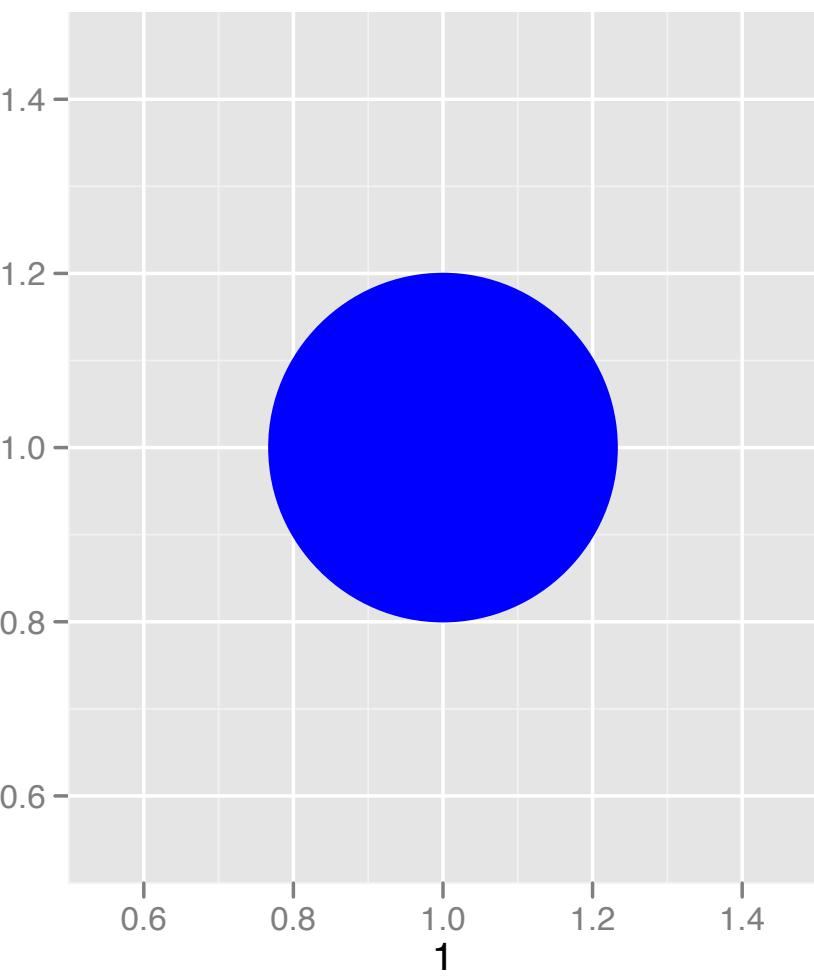

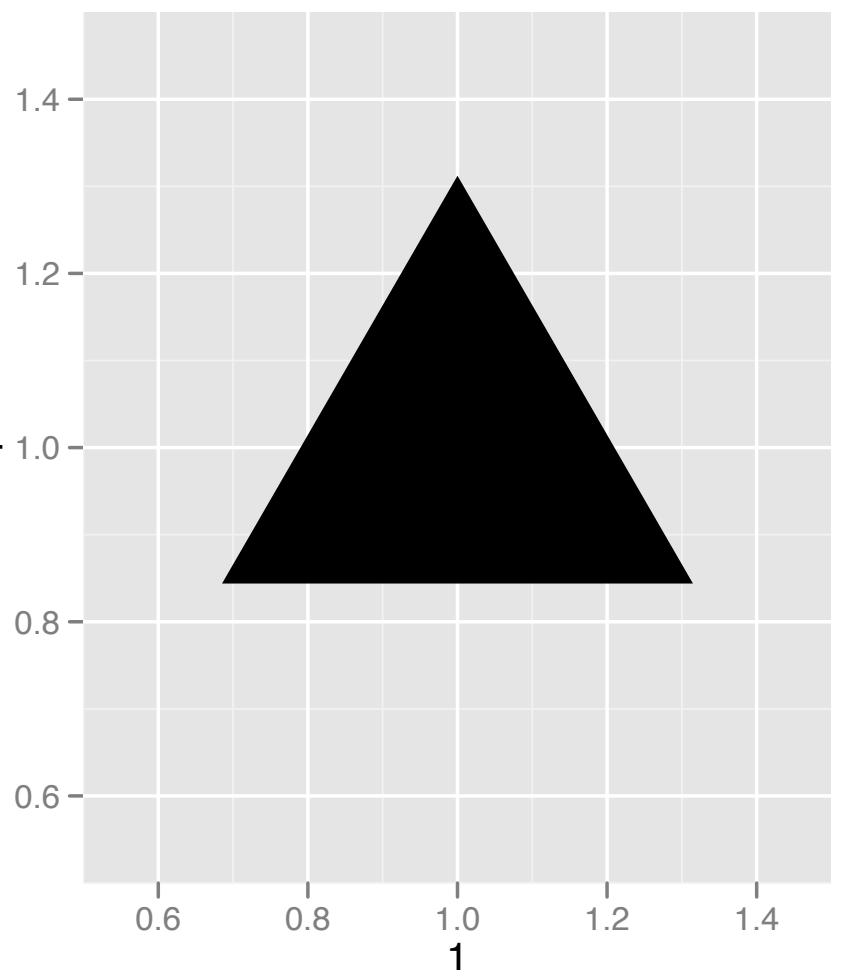

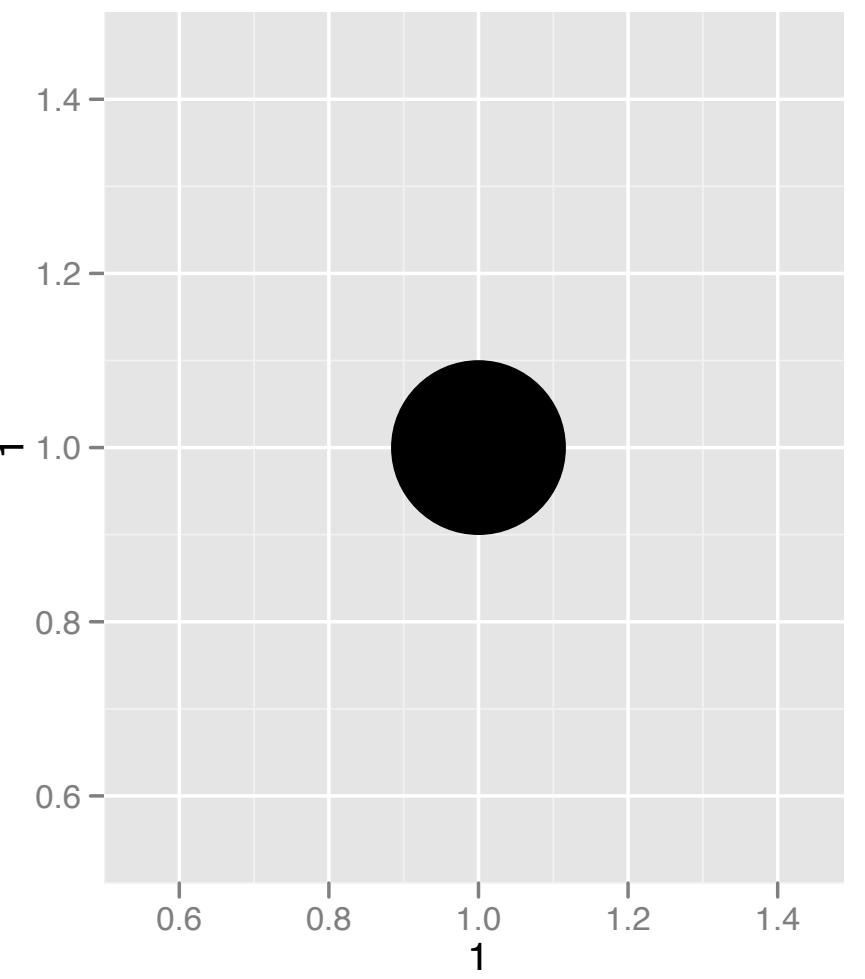

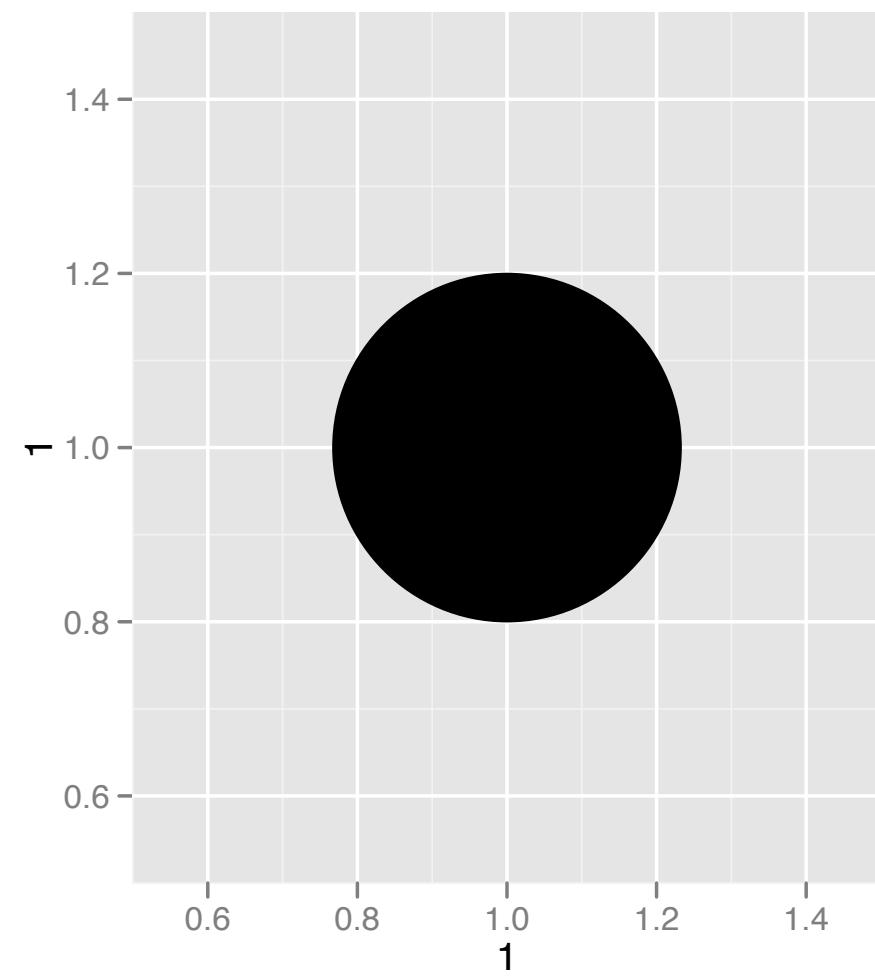

How can we test
the theory?

Why do these
cars get better
mileage?

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy))
```

Aesthetics

Data Space

class

2seater

compact

midsize

minivan

pickup

subcompact

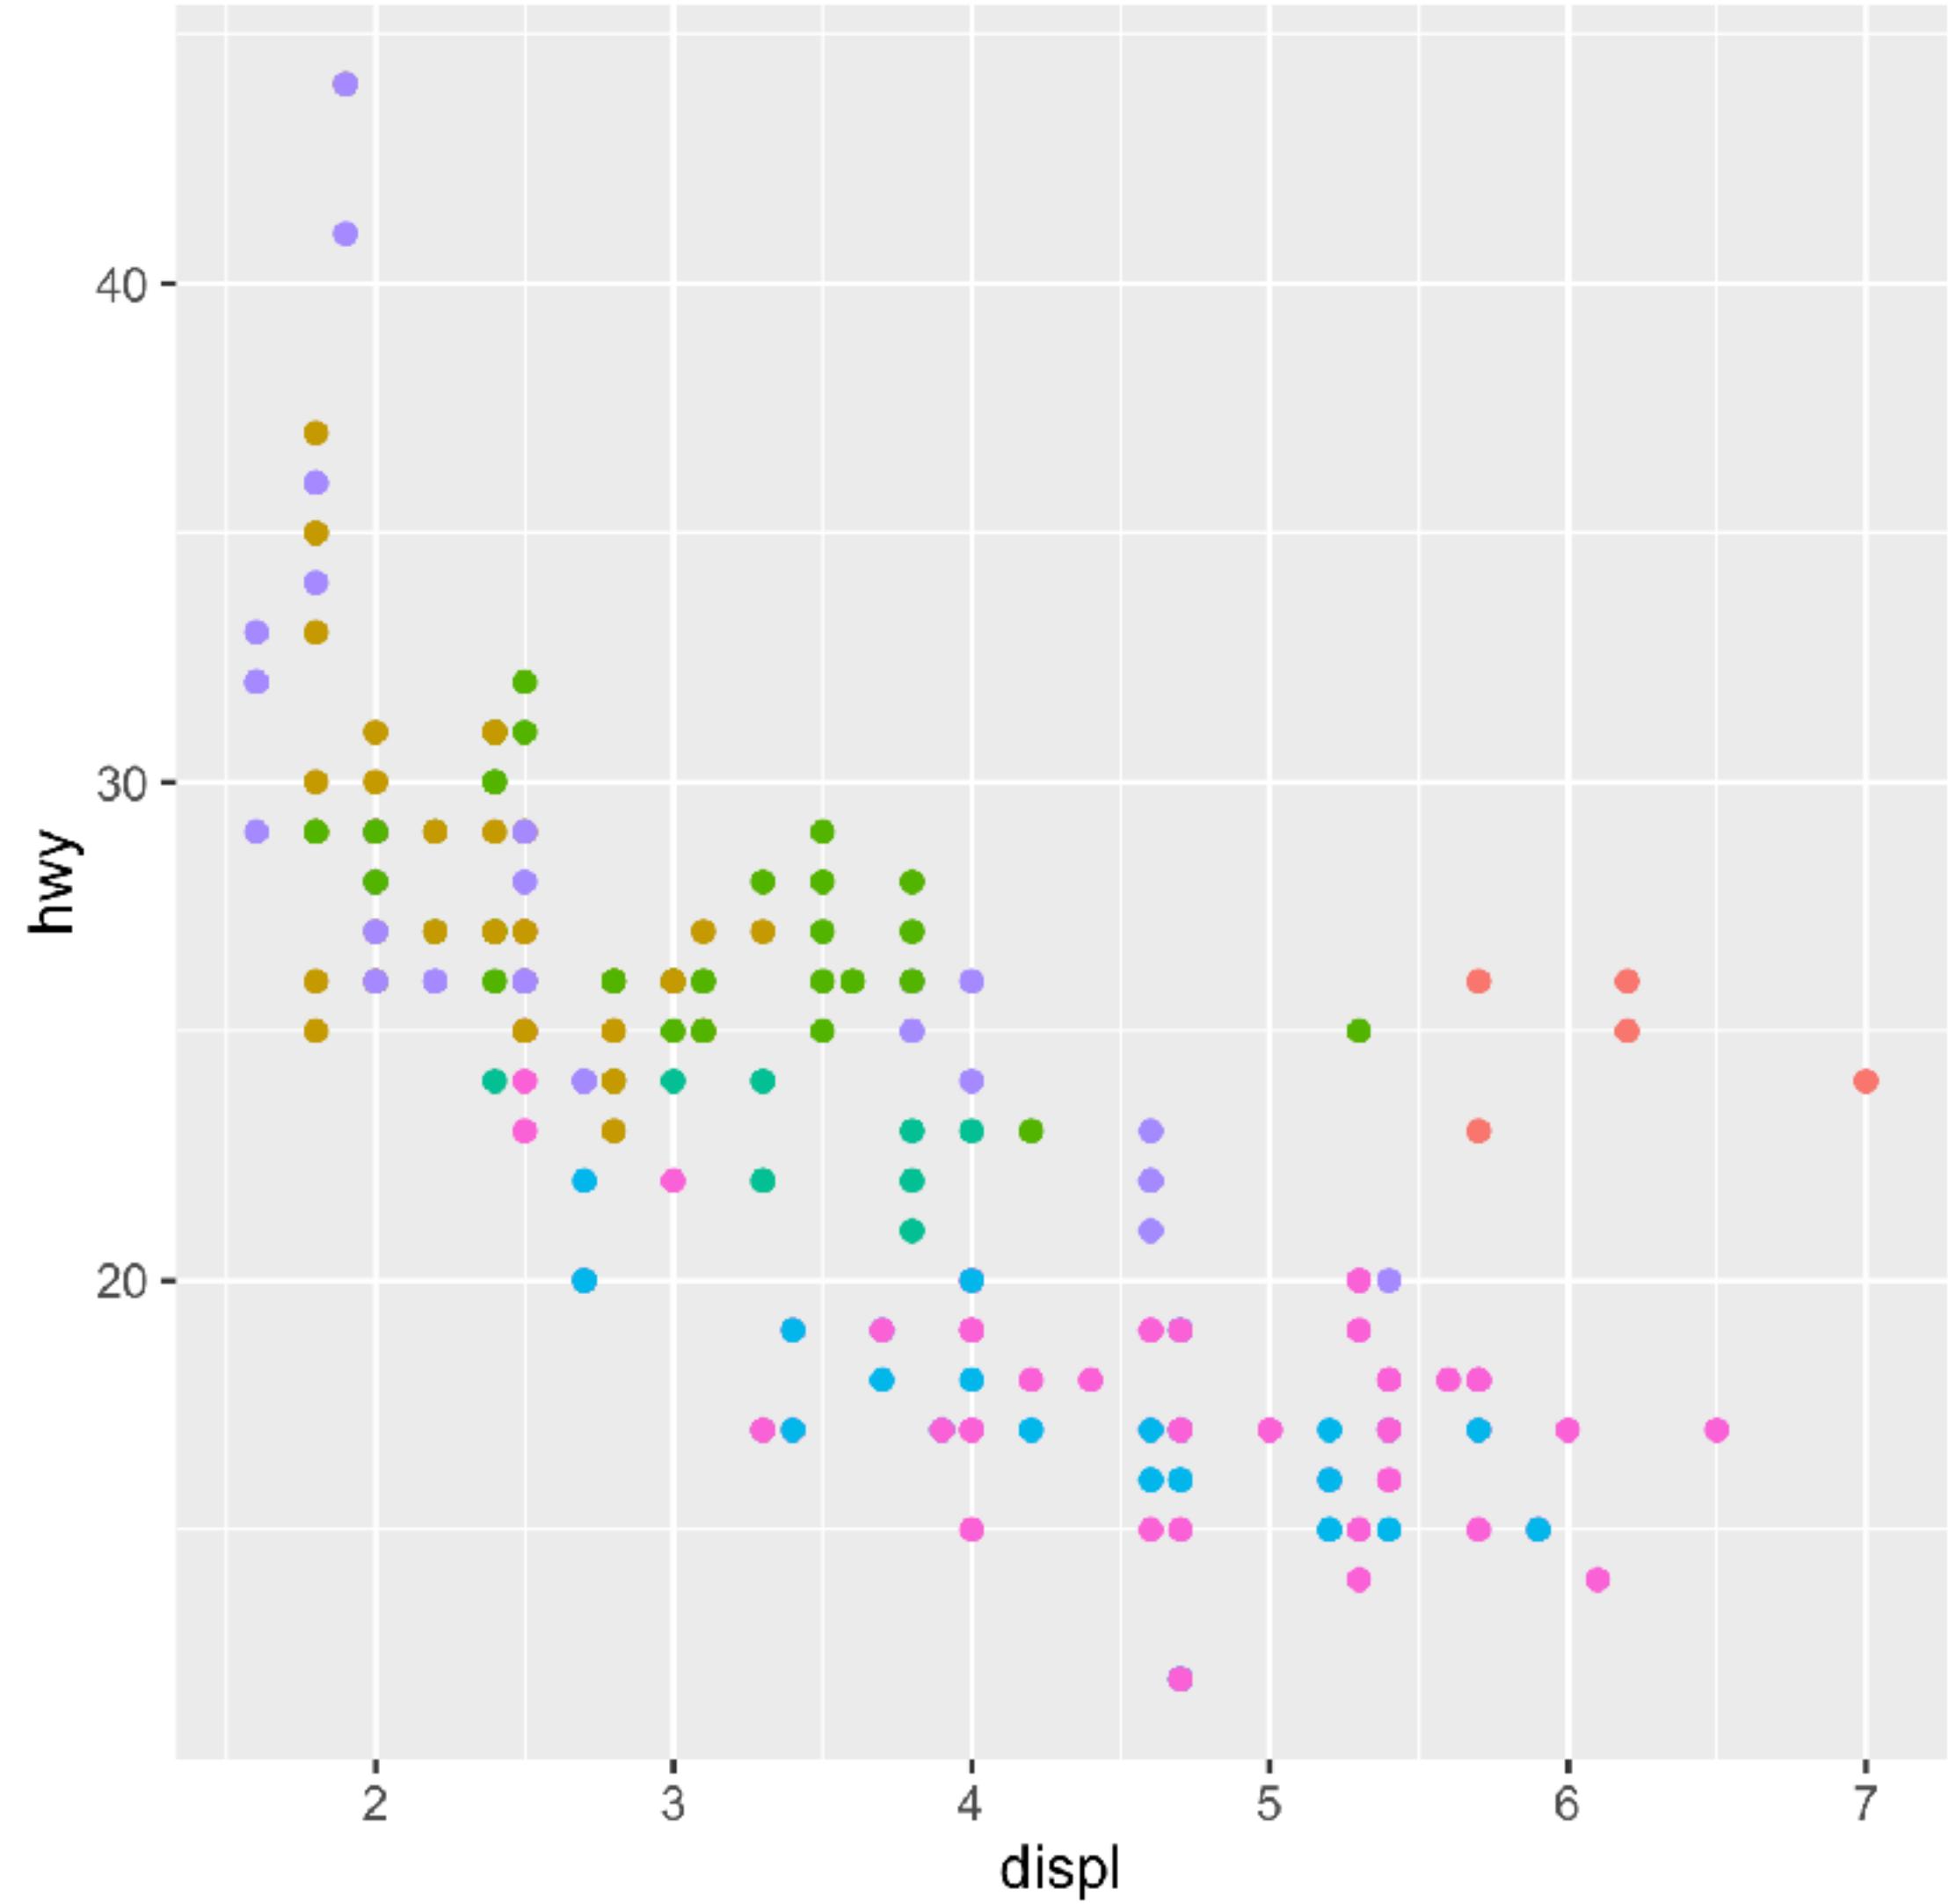

suv

Aesthetics

aesthetic
property

Variable to
map it to

```
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, color = class))  
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, size = class))  
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, shape = class))  
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, alpha = class))
```

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy, color = class))
```

Your Turn 2

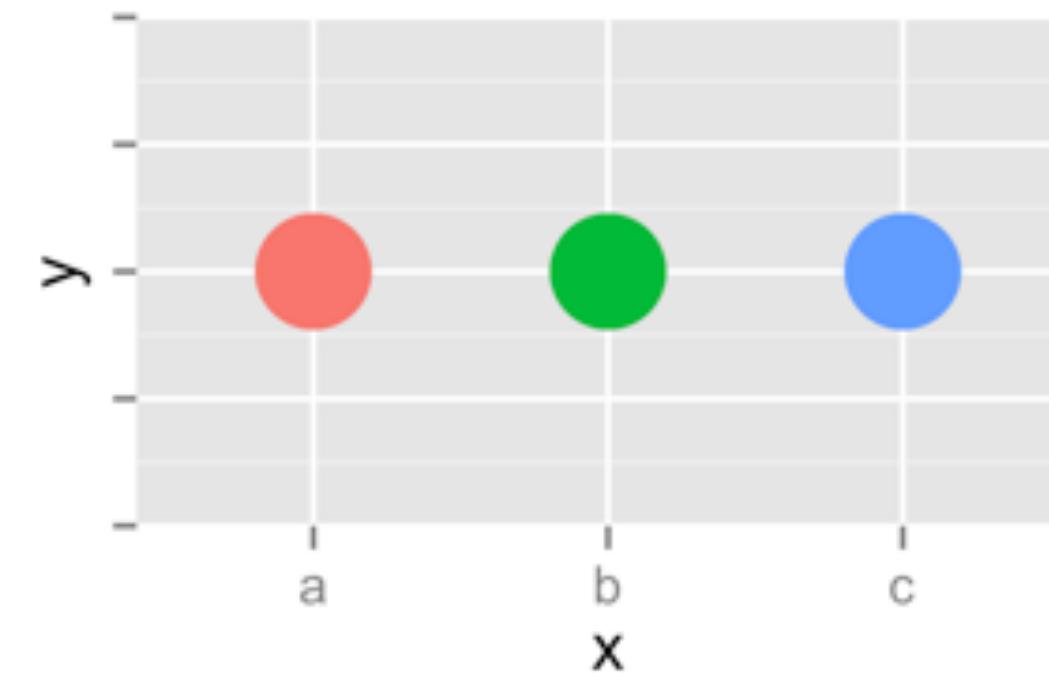

In the next chunk, add color, size, alpha, and shape aesthetics to your graph. Experiment.

Do different things happen when you map aesthetics to discrete and continuous variables?

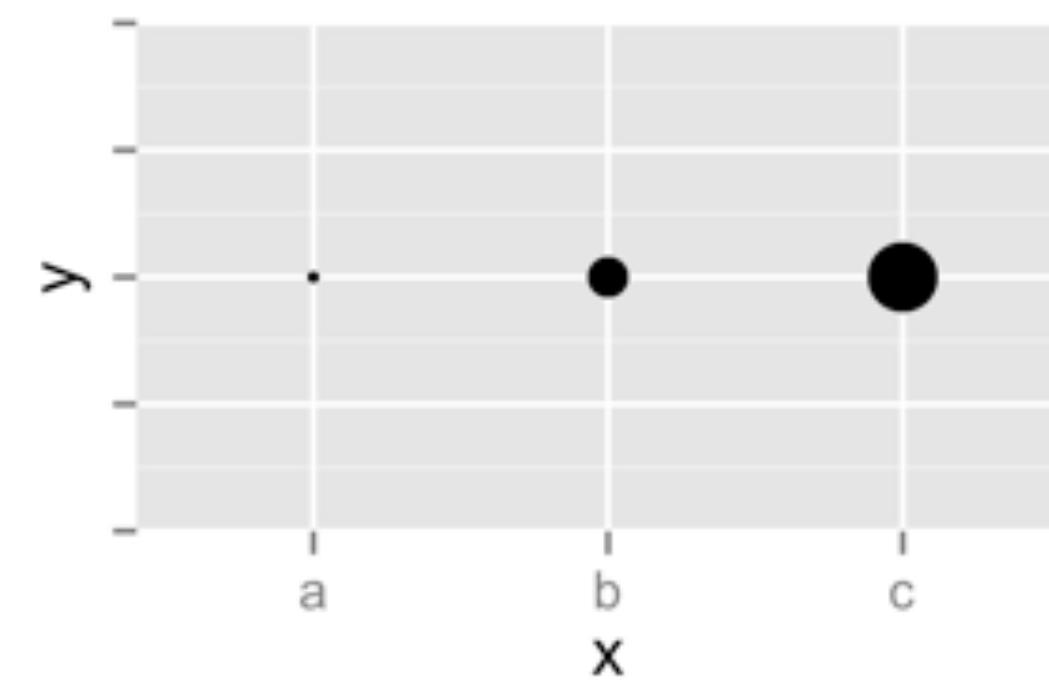

What happens when you use more than one aesthetic?

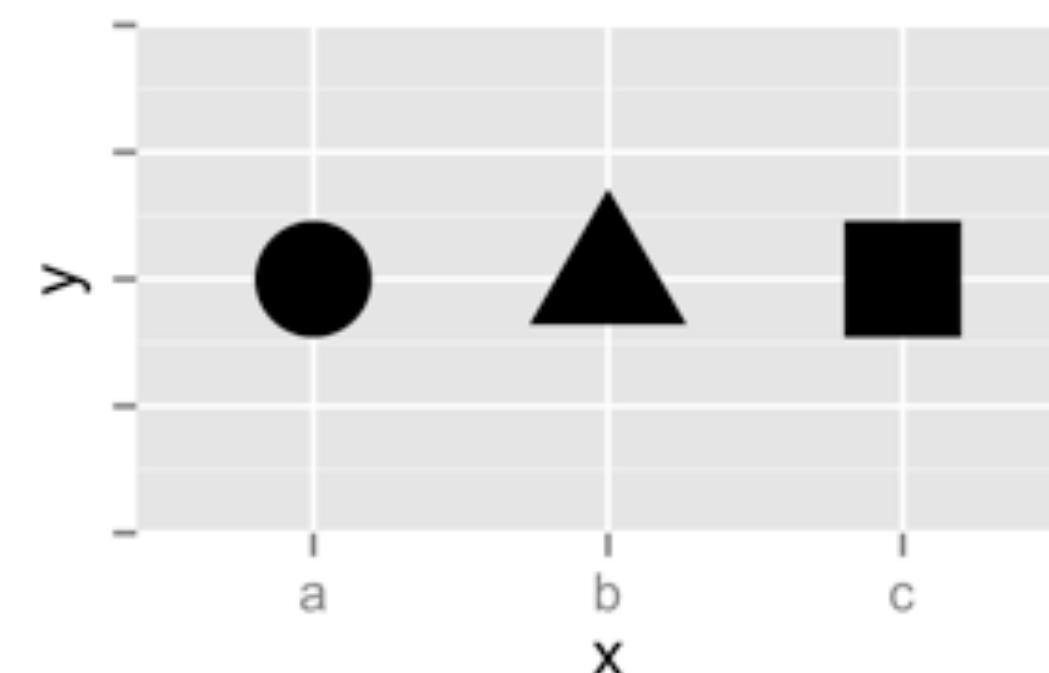

Color

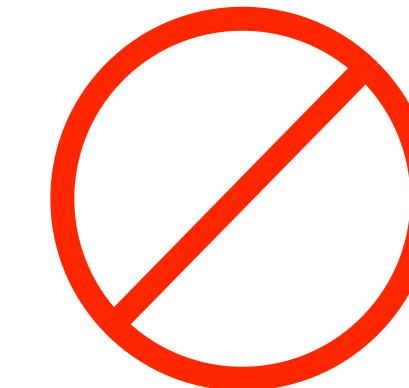

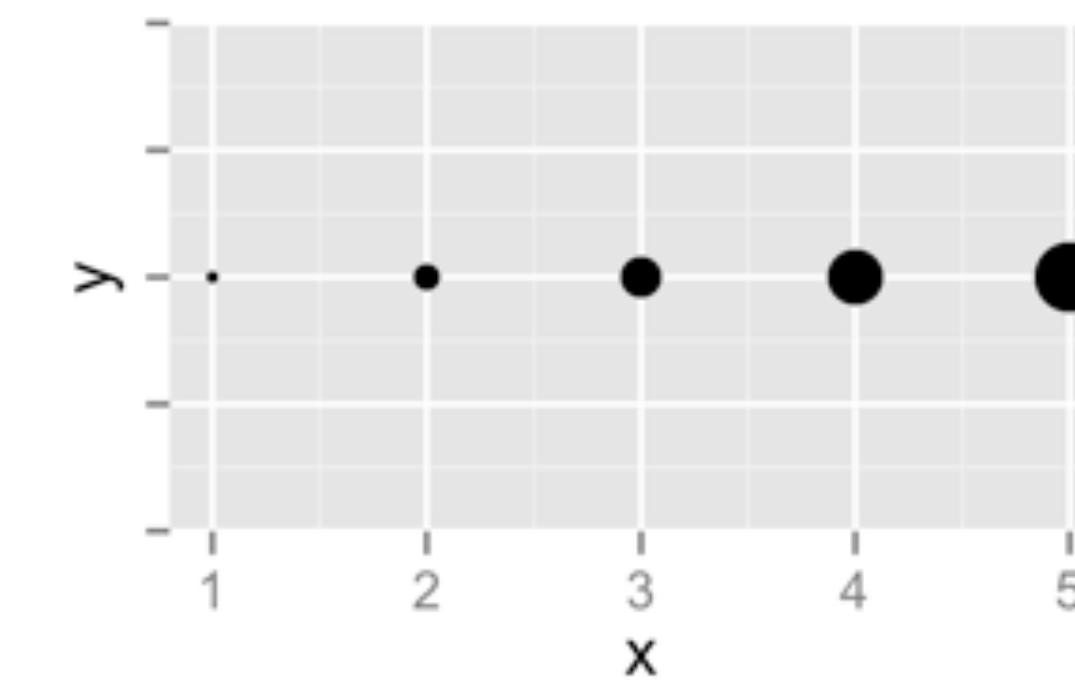

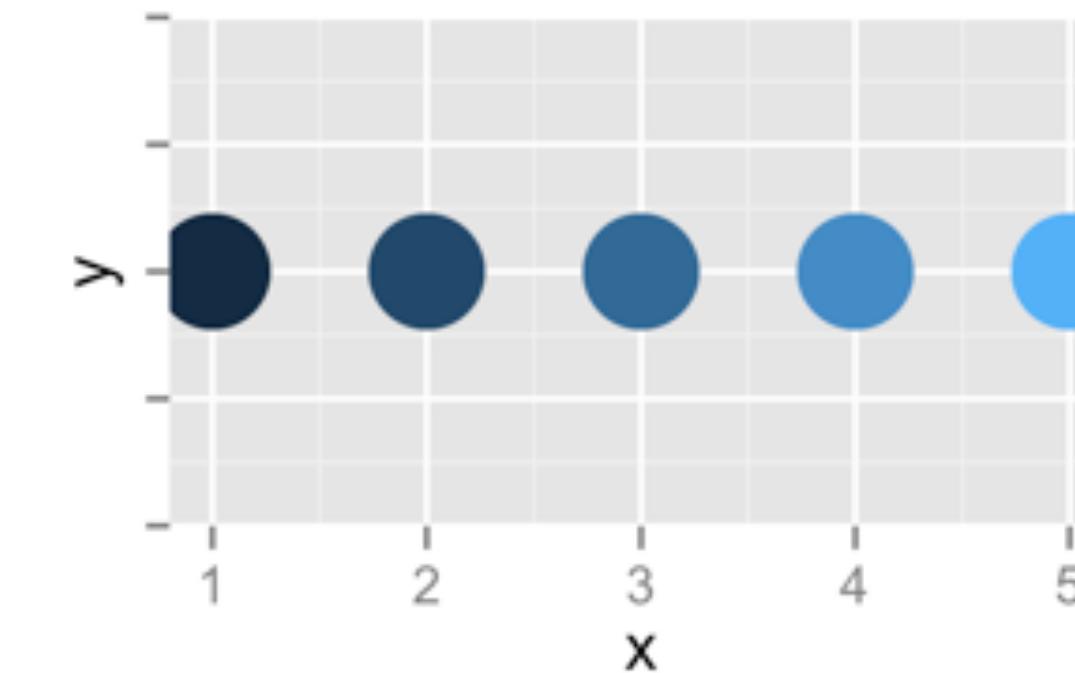

Size

Shape

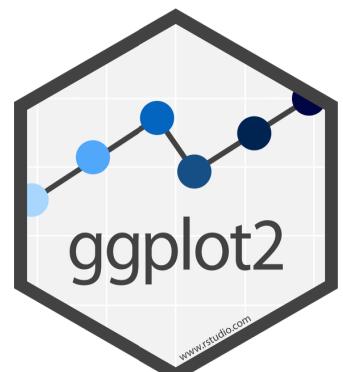

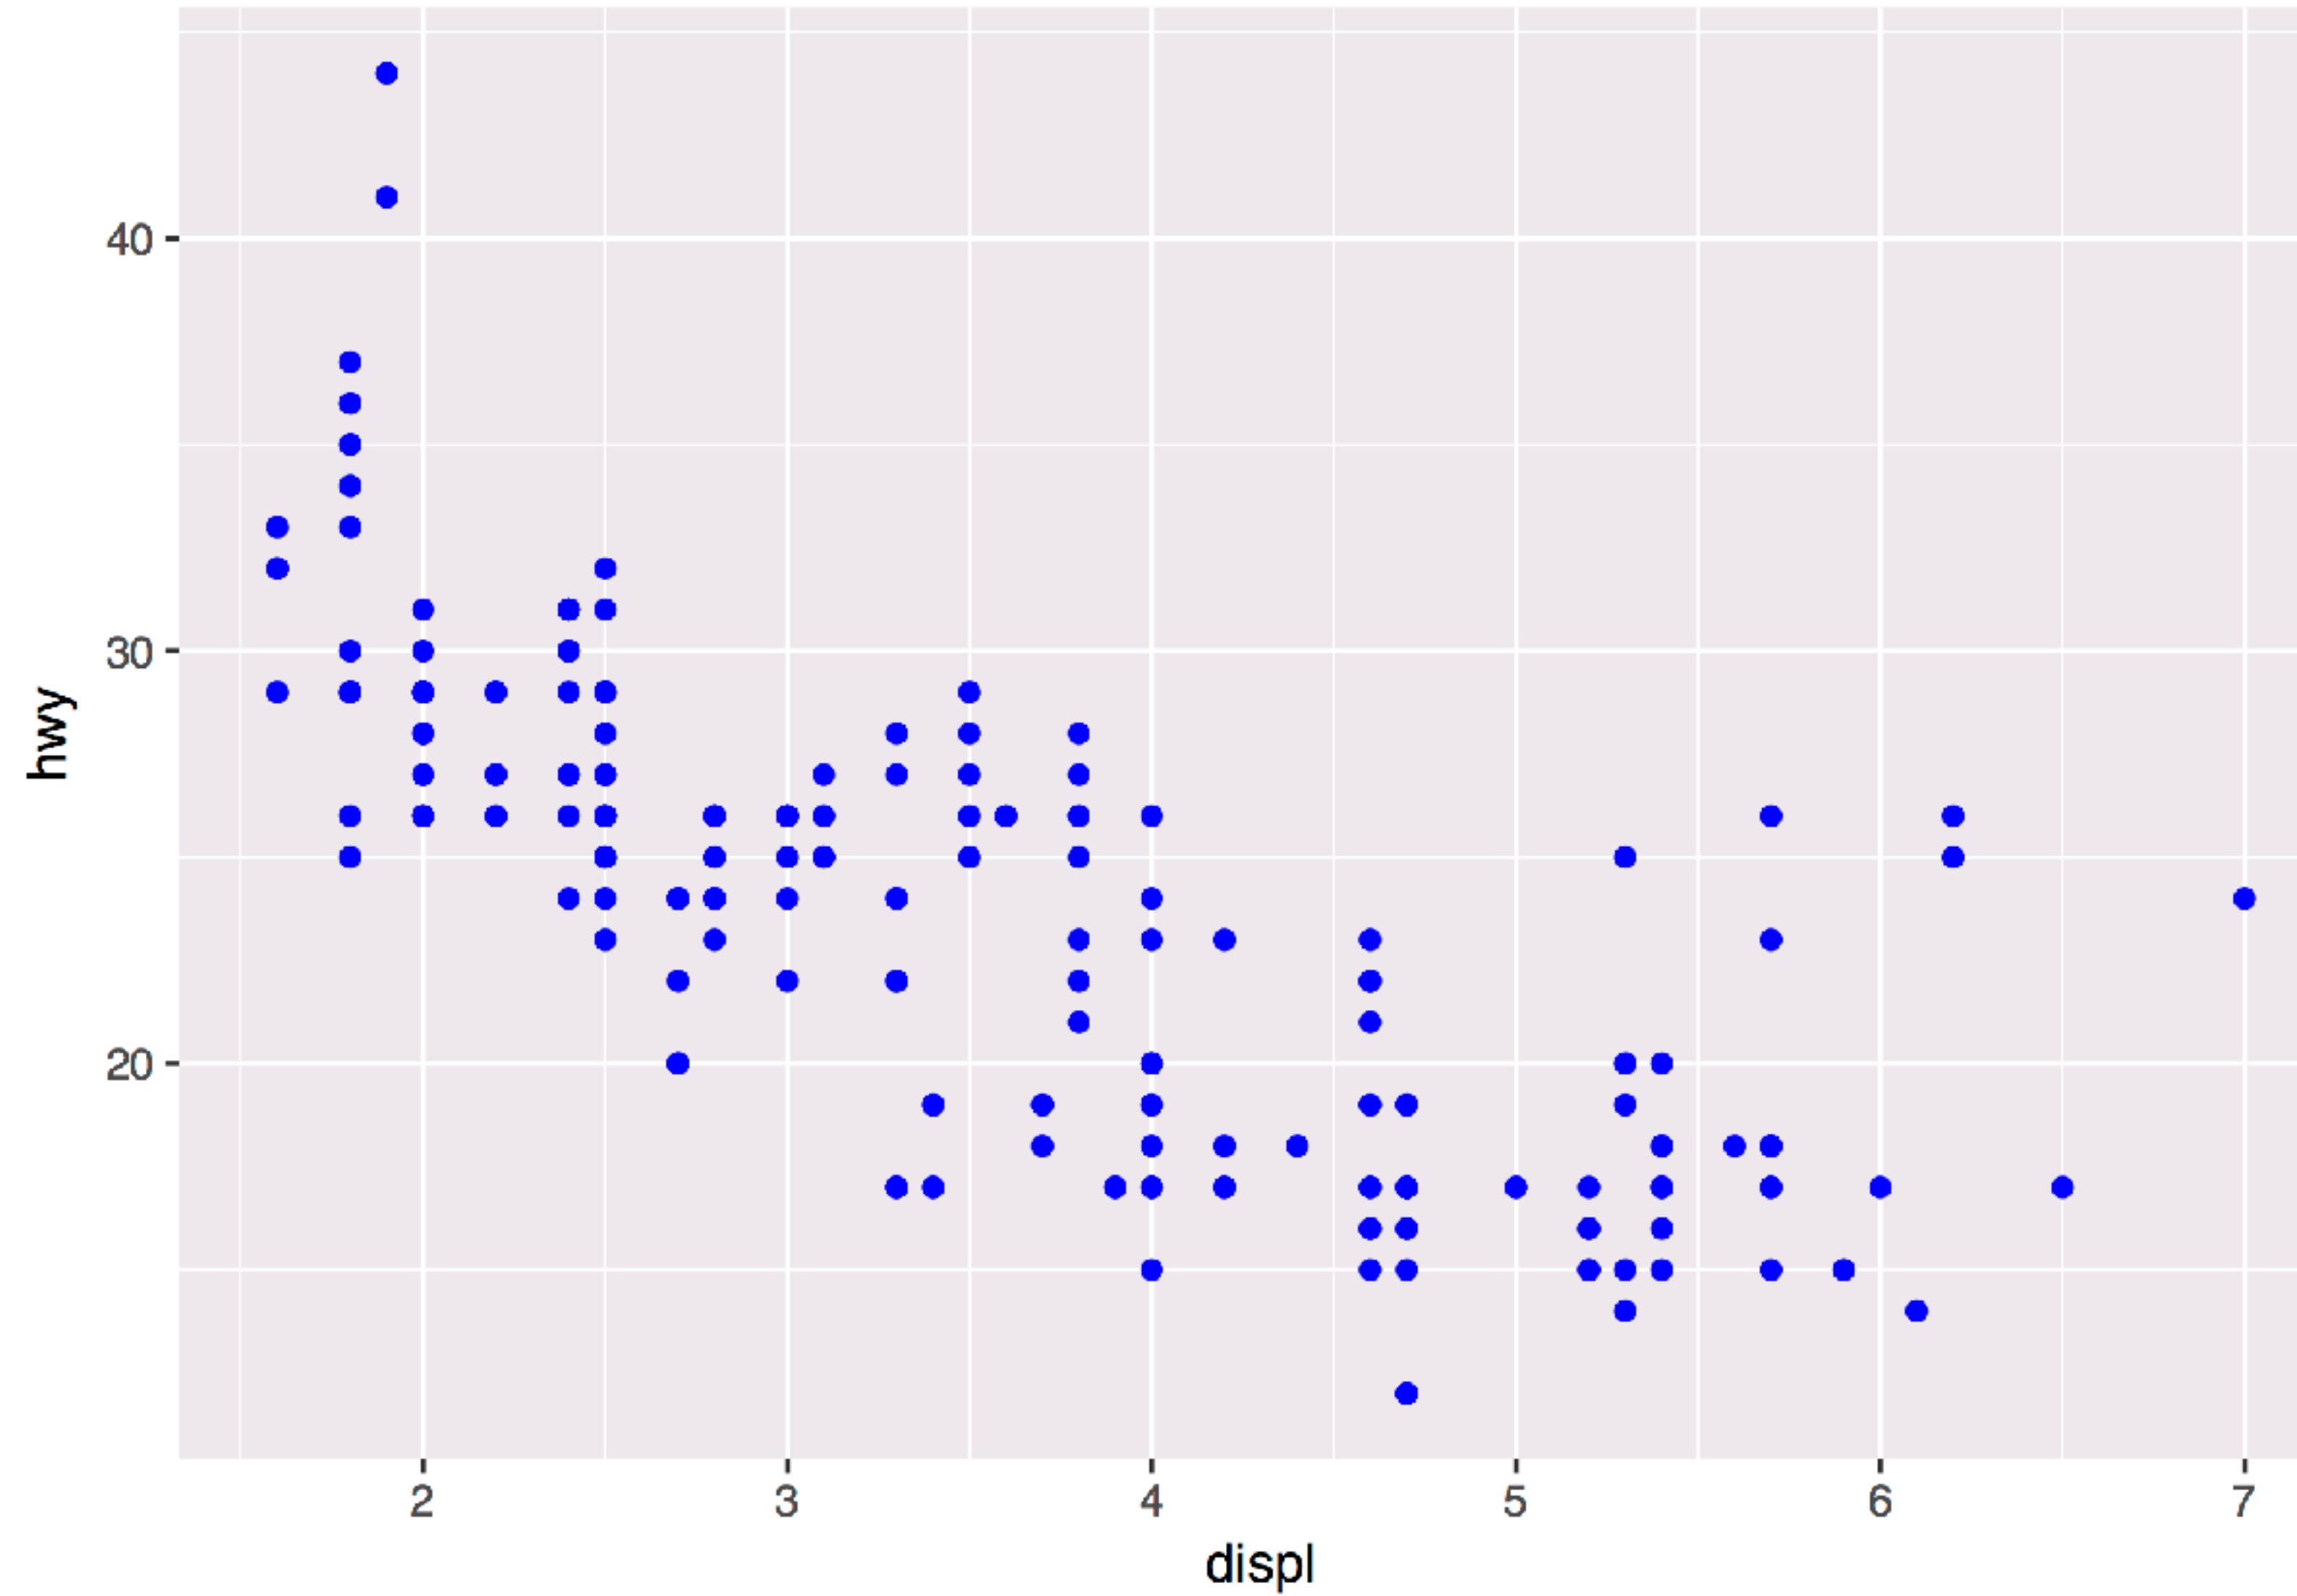

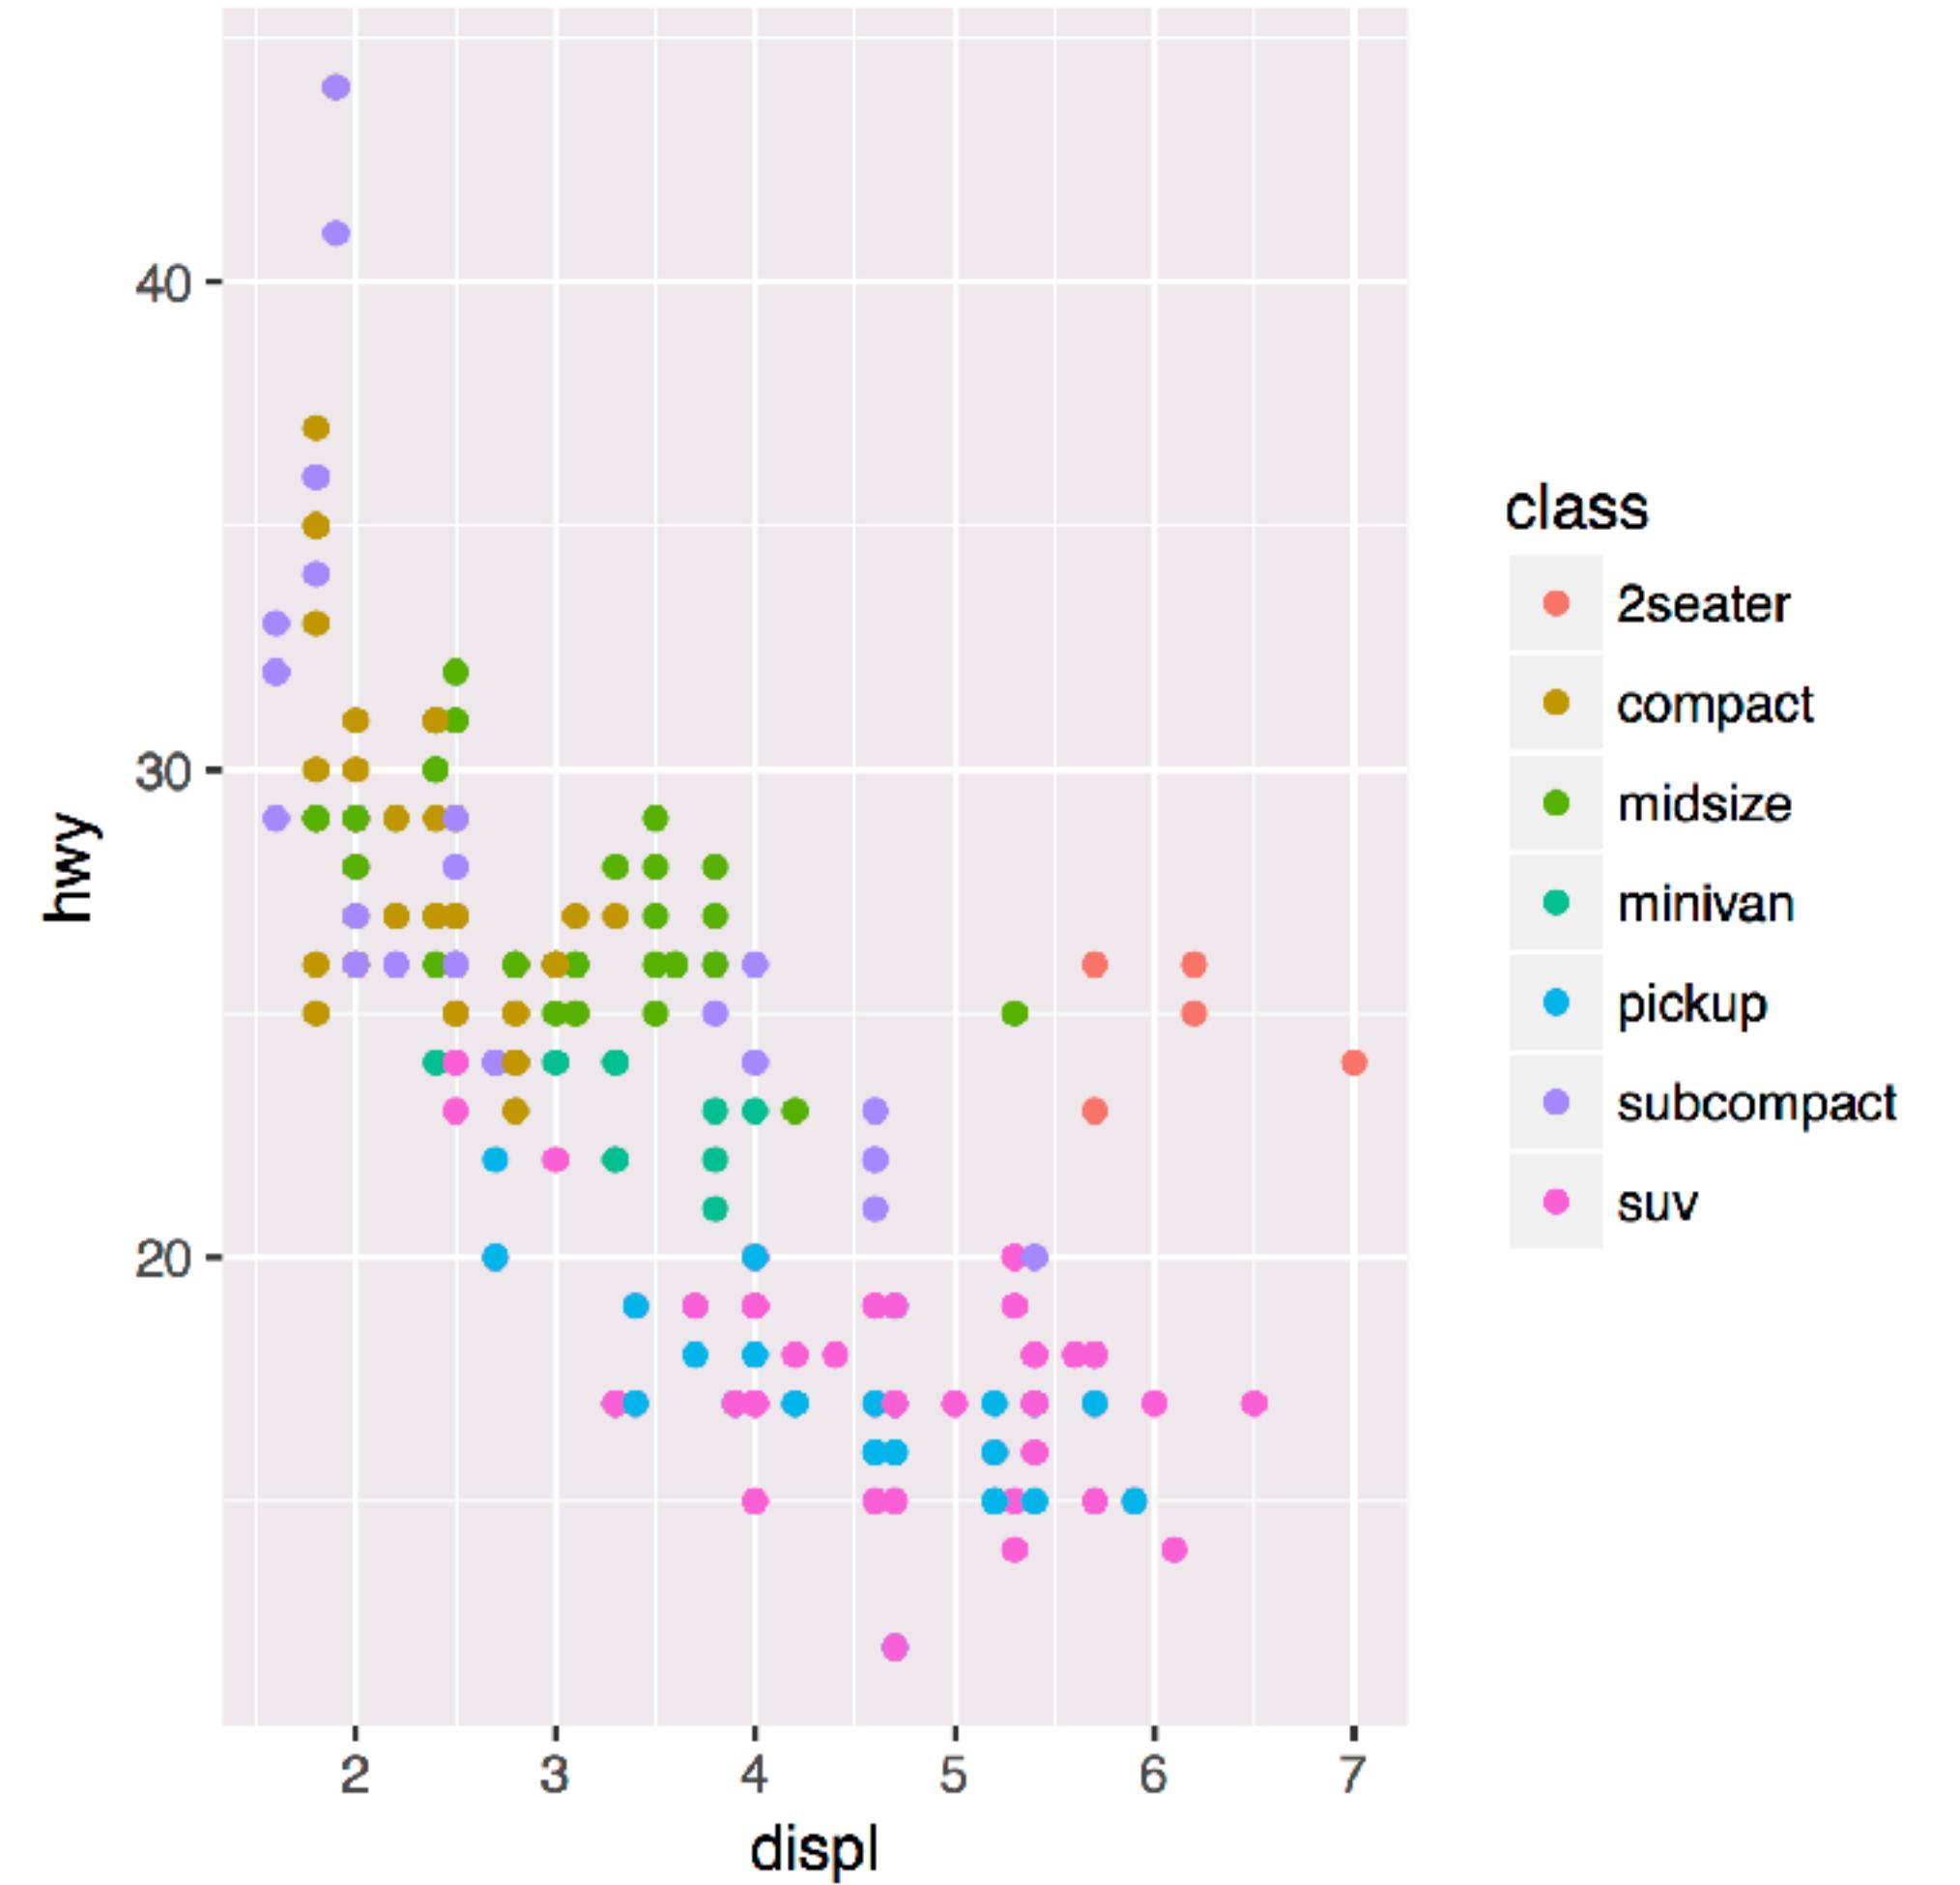

Continuous

set vs. map

How would you make this plot?

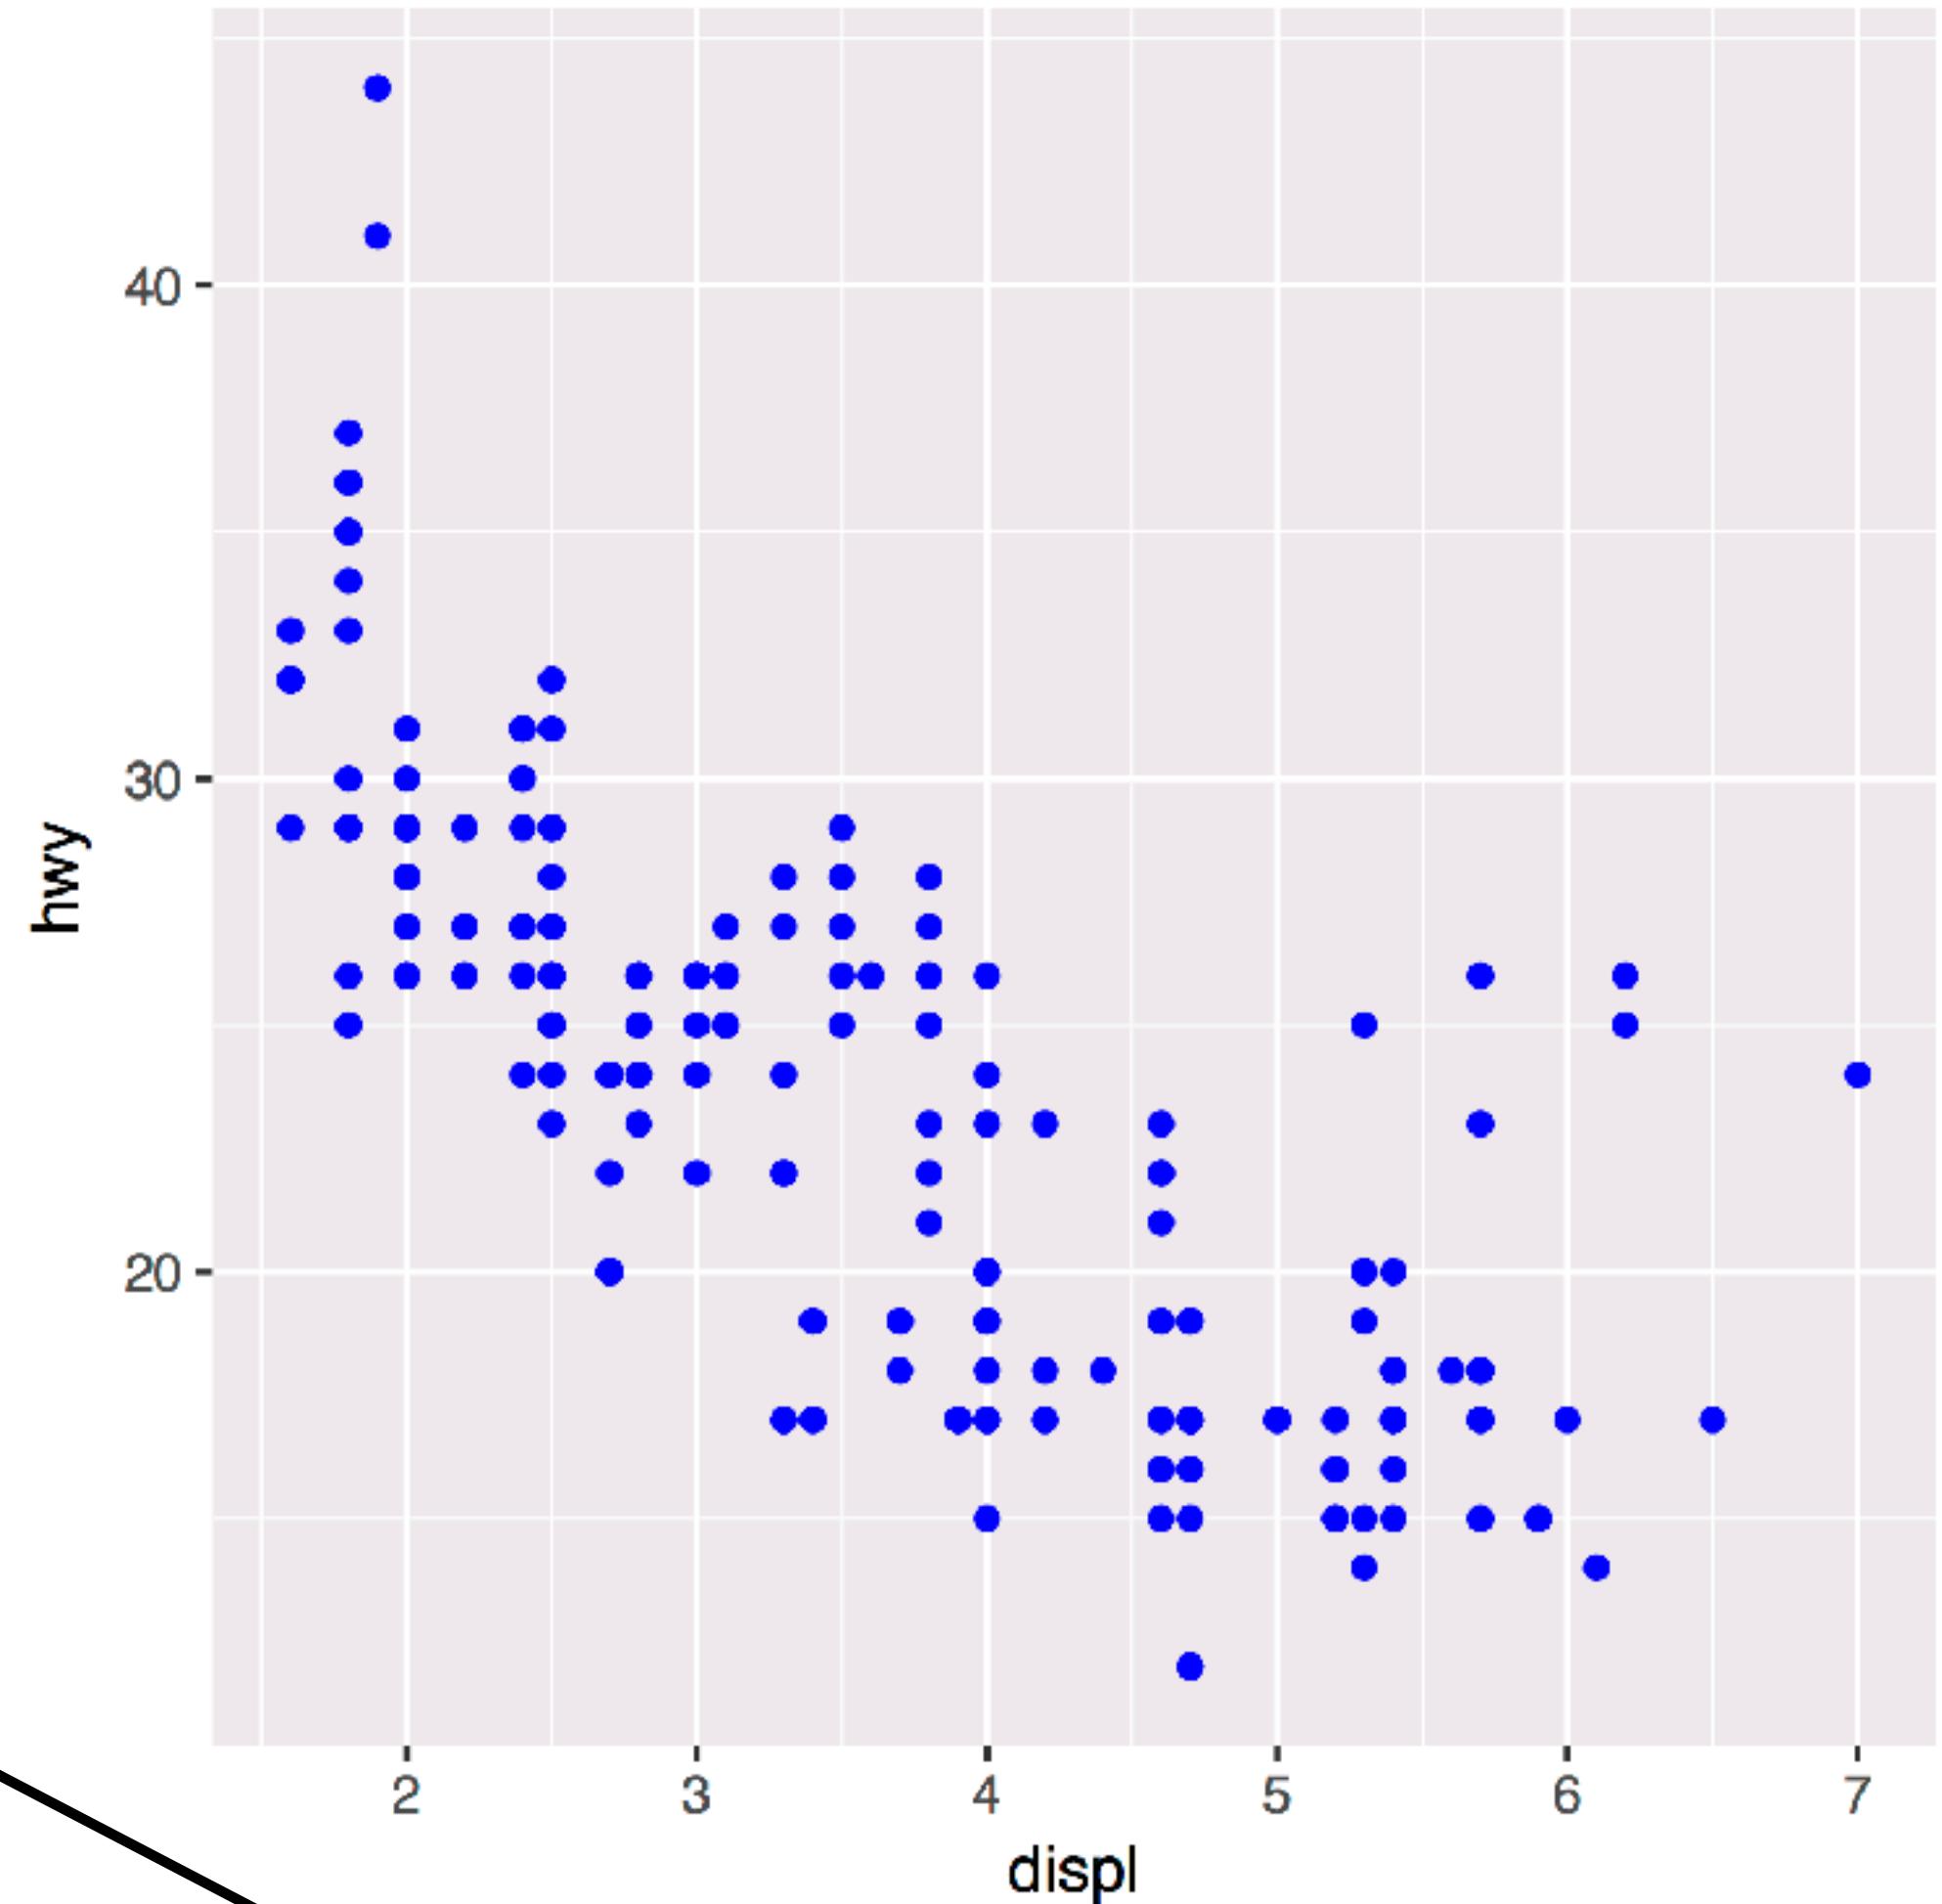

Inside of aes(): maps an aesthetic to a variable

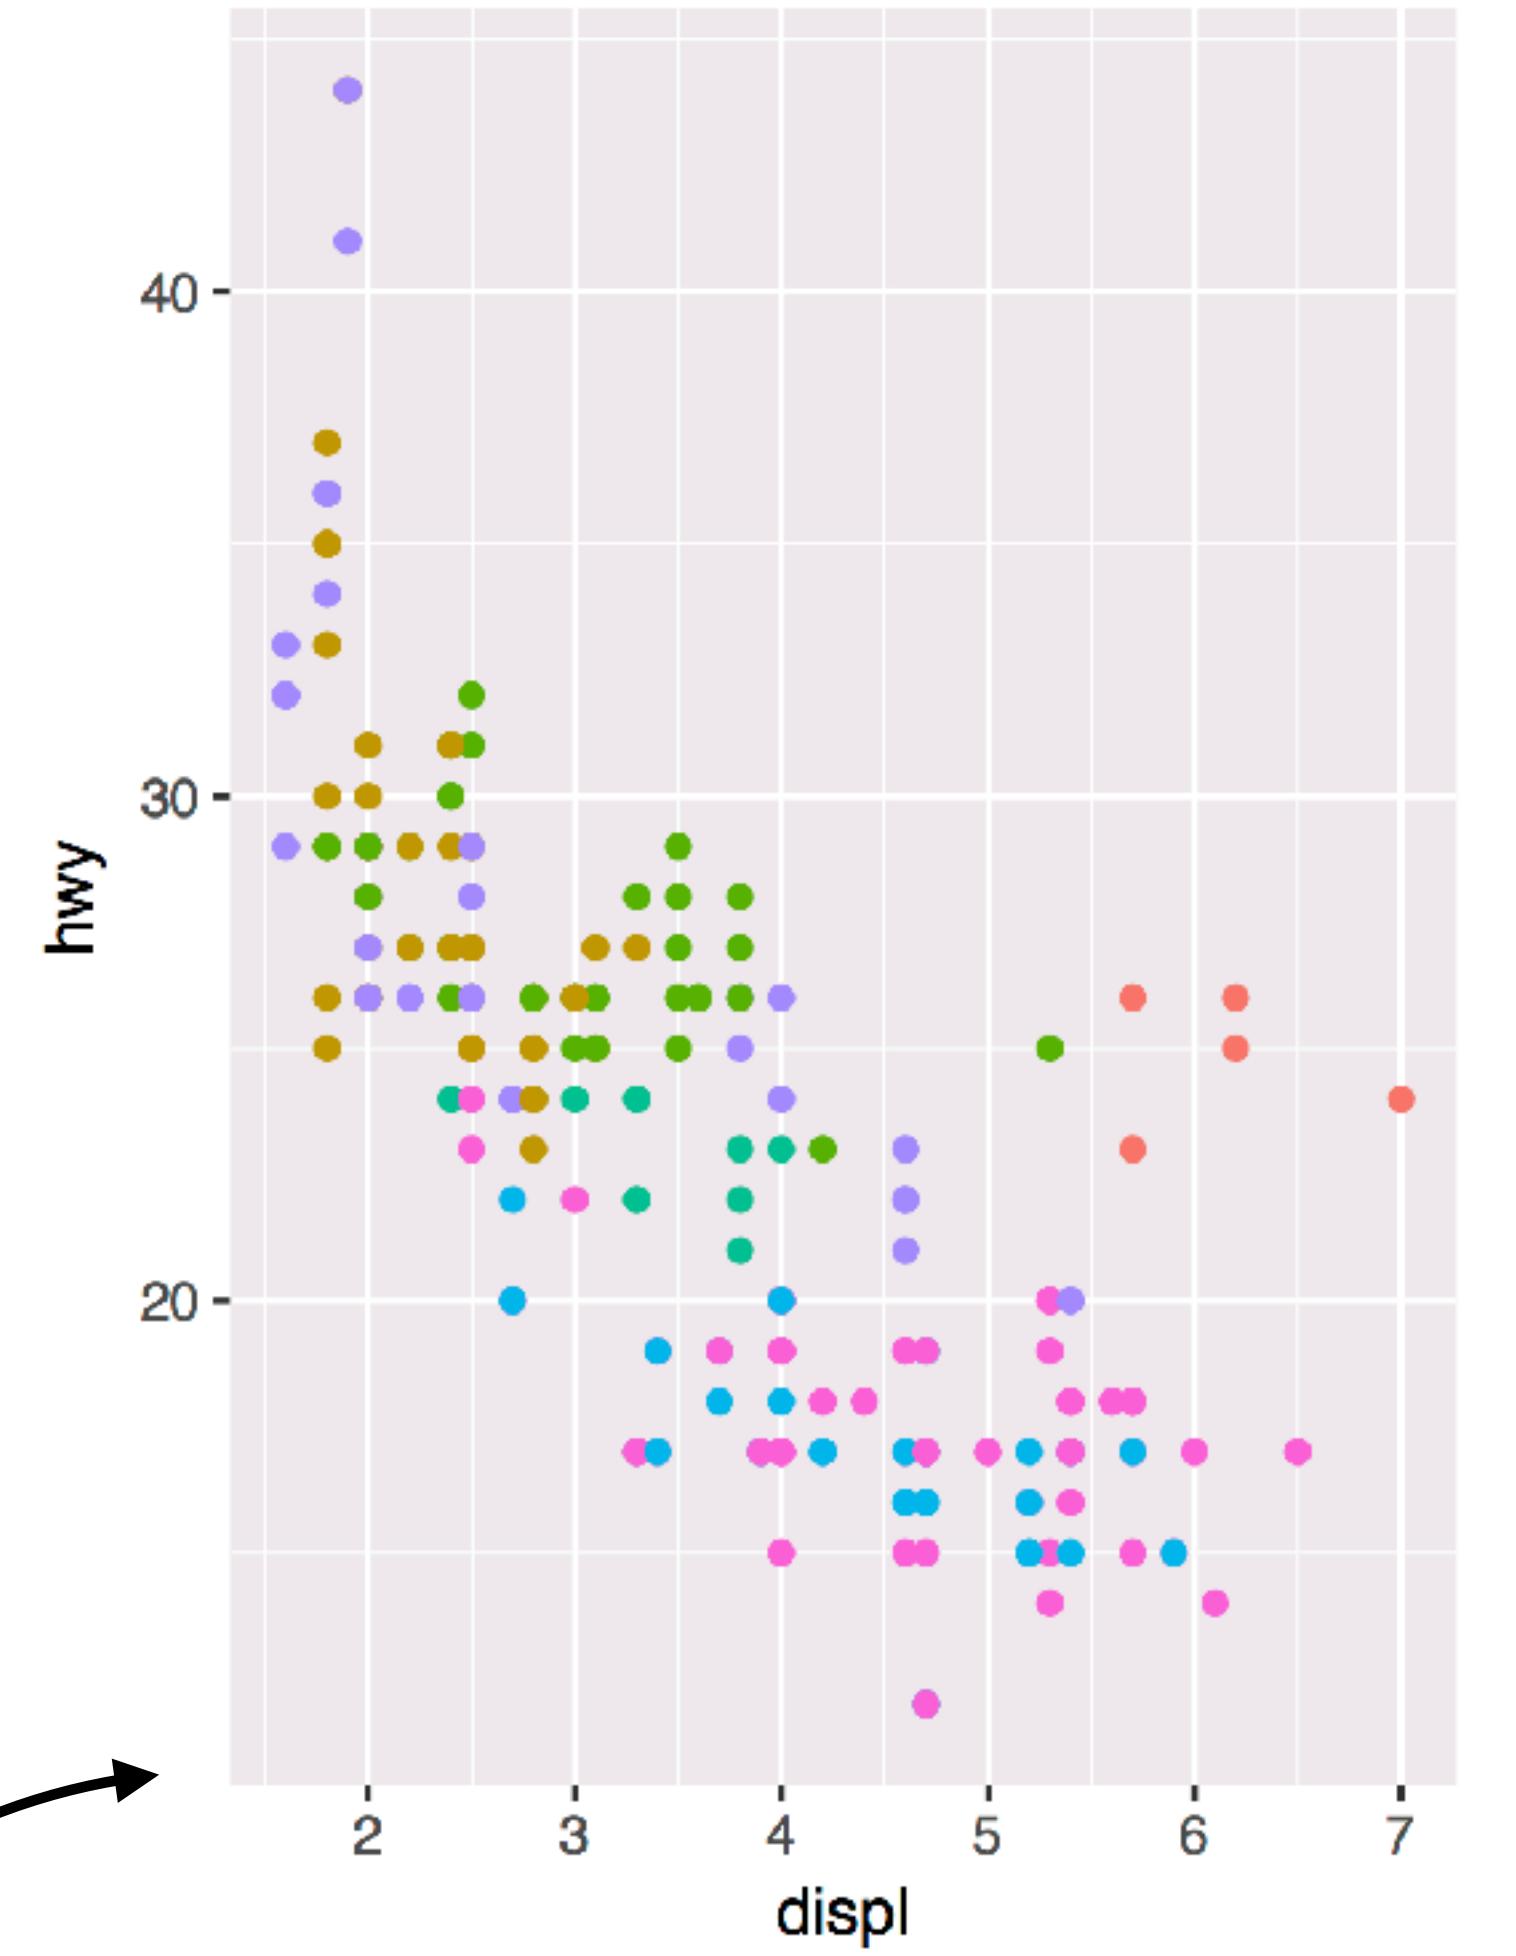

```
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, color = class))
```

Outside of aes(): sets
an aesthetic to a value

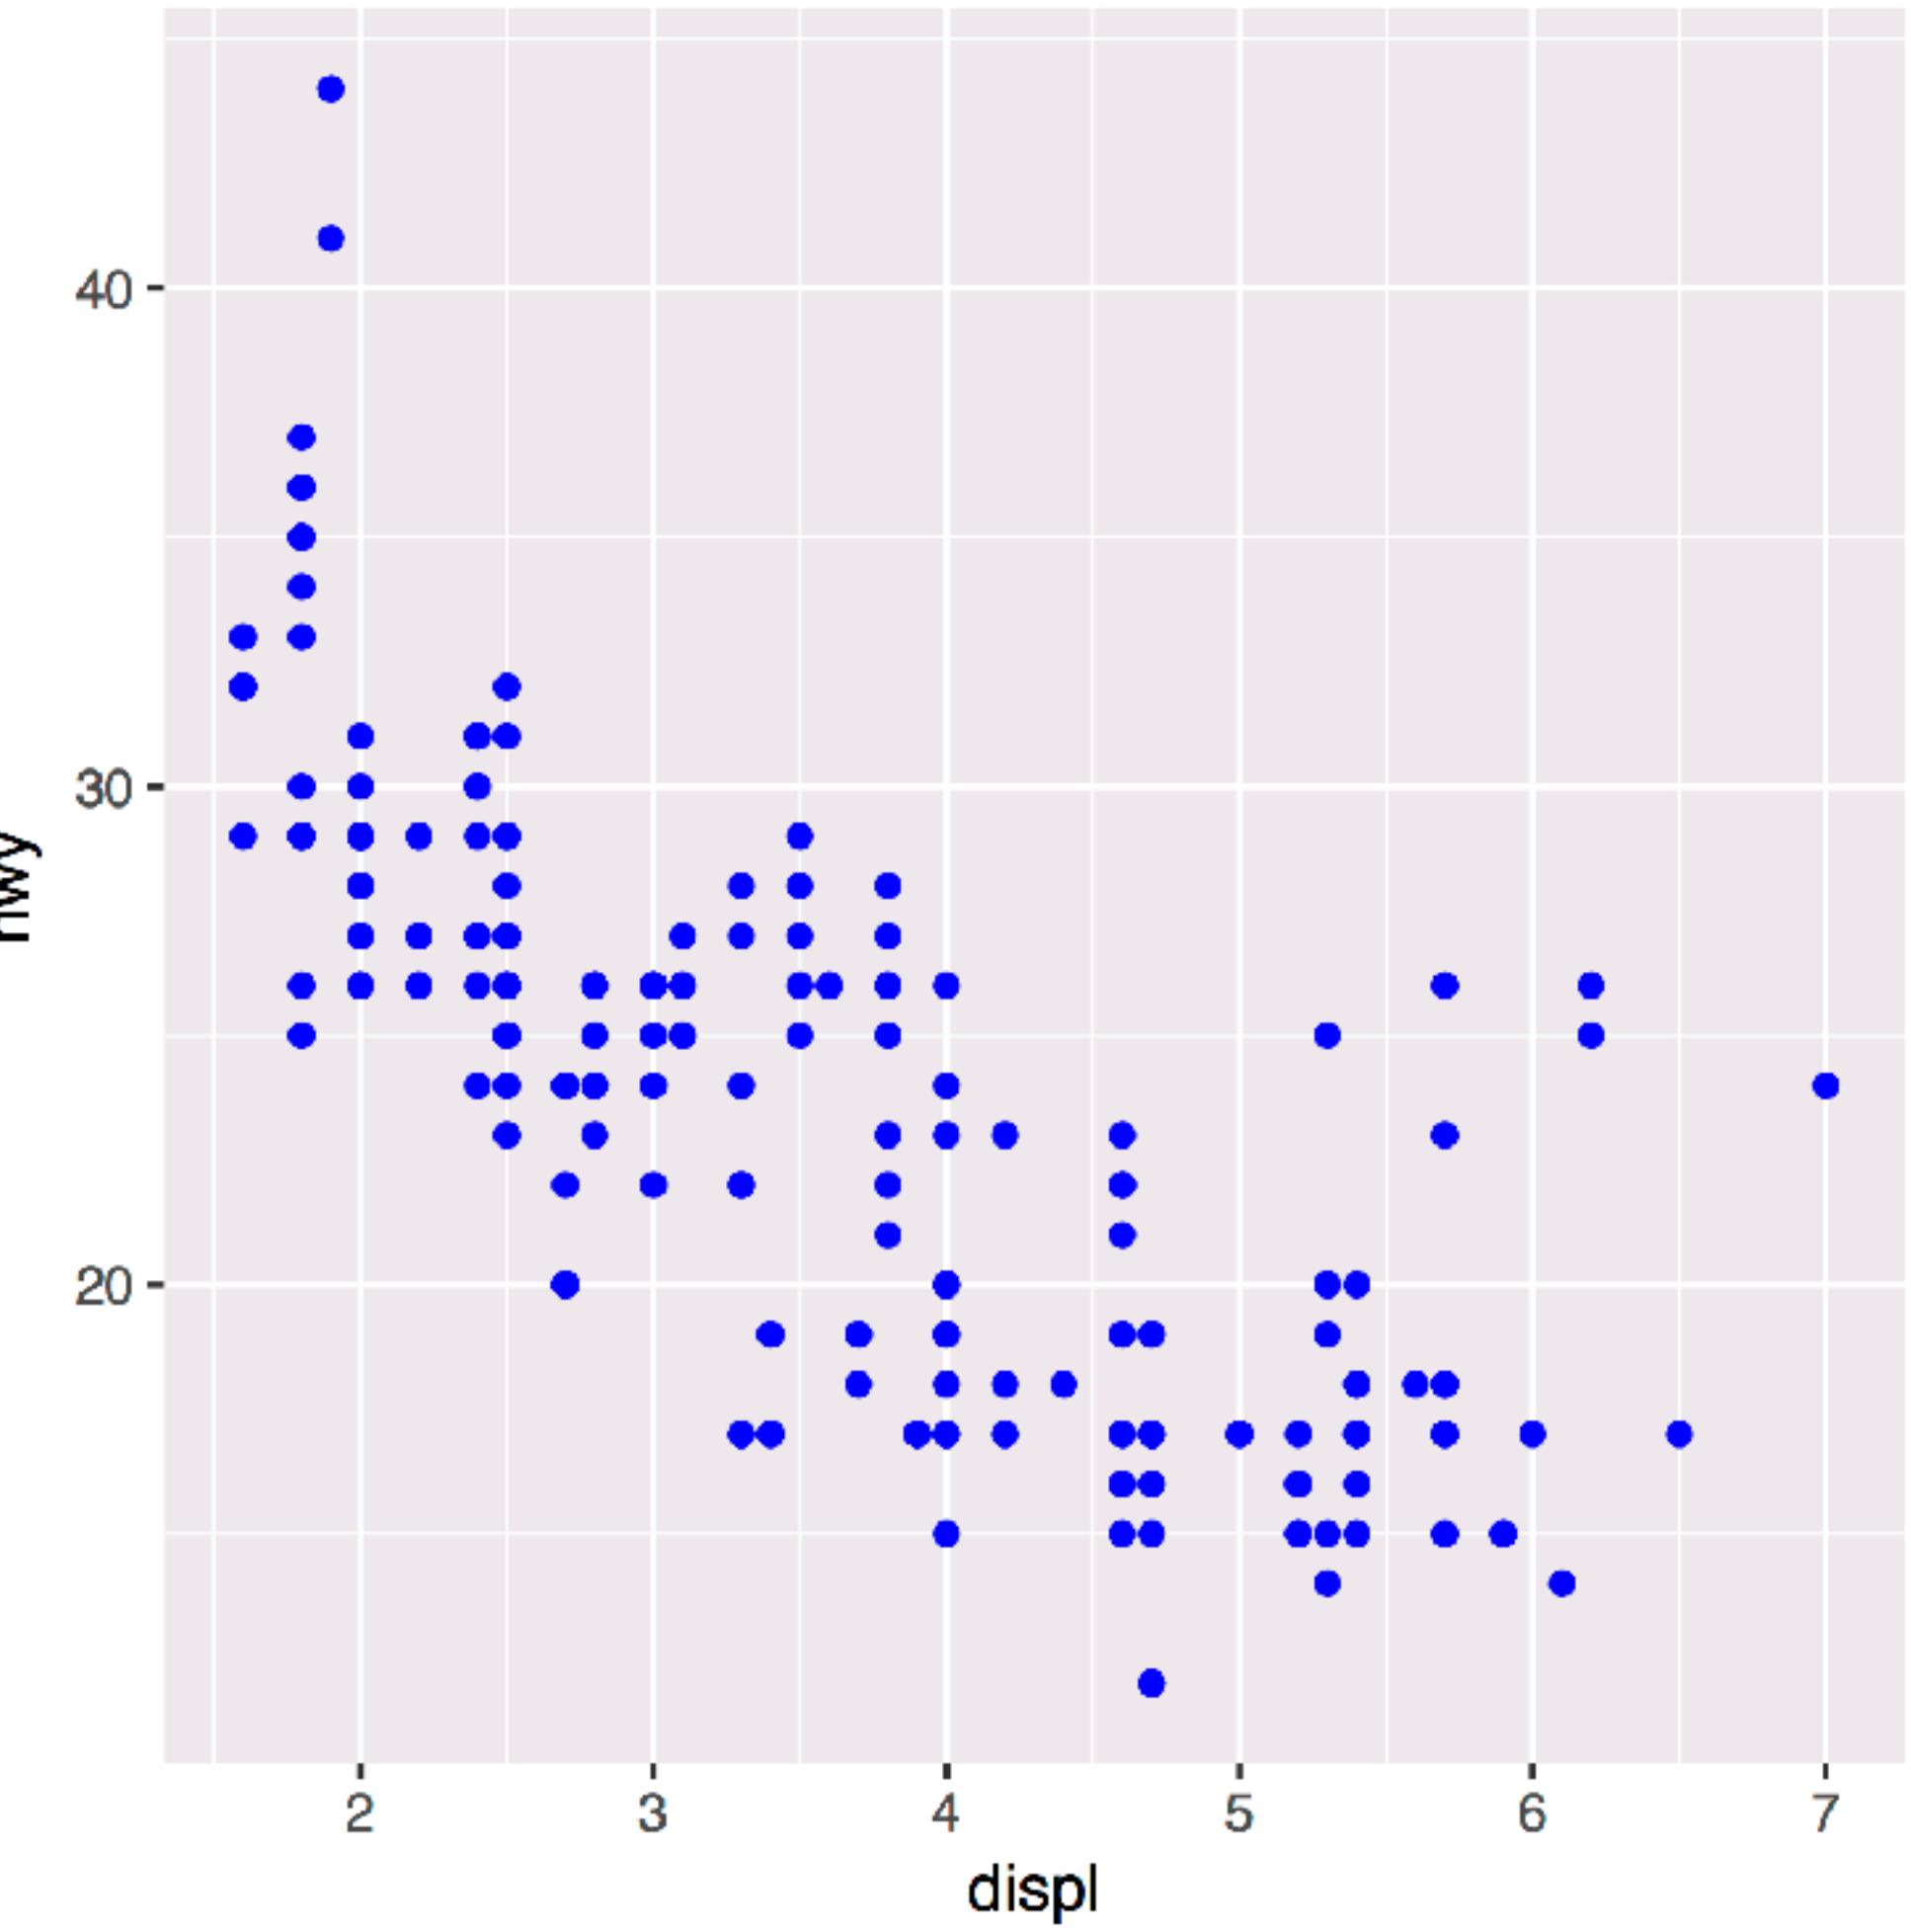

```
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, color = class))
```

```
ggplot(mpg) + geom_point(aes(x = displ, y = hwy), color = "blue")
```

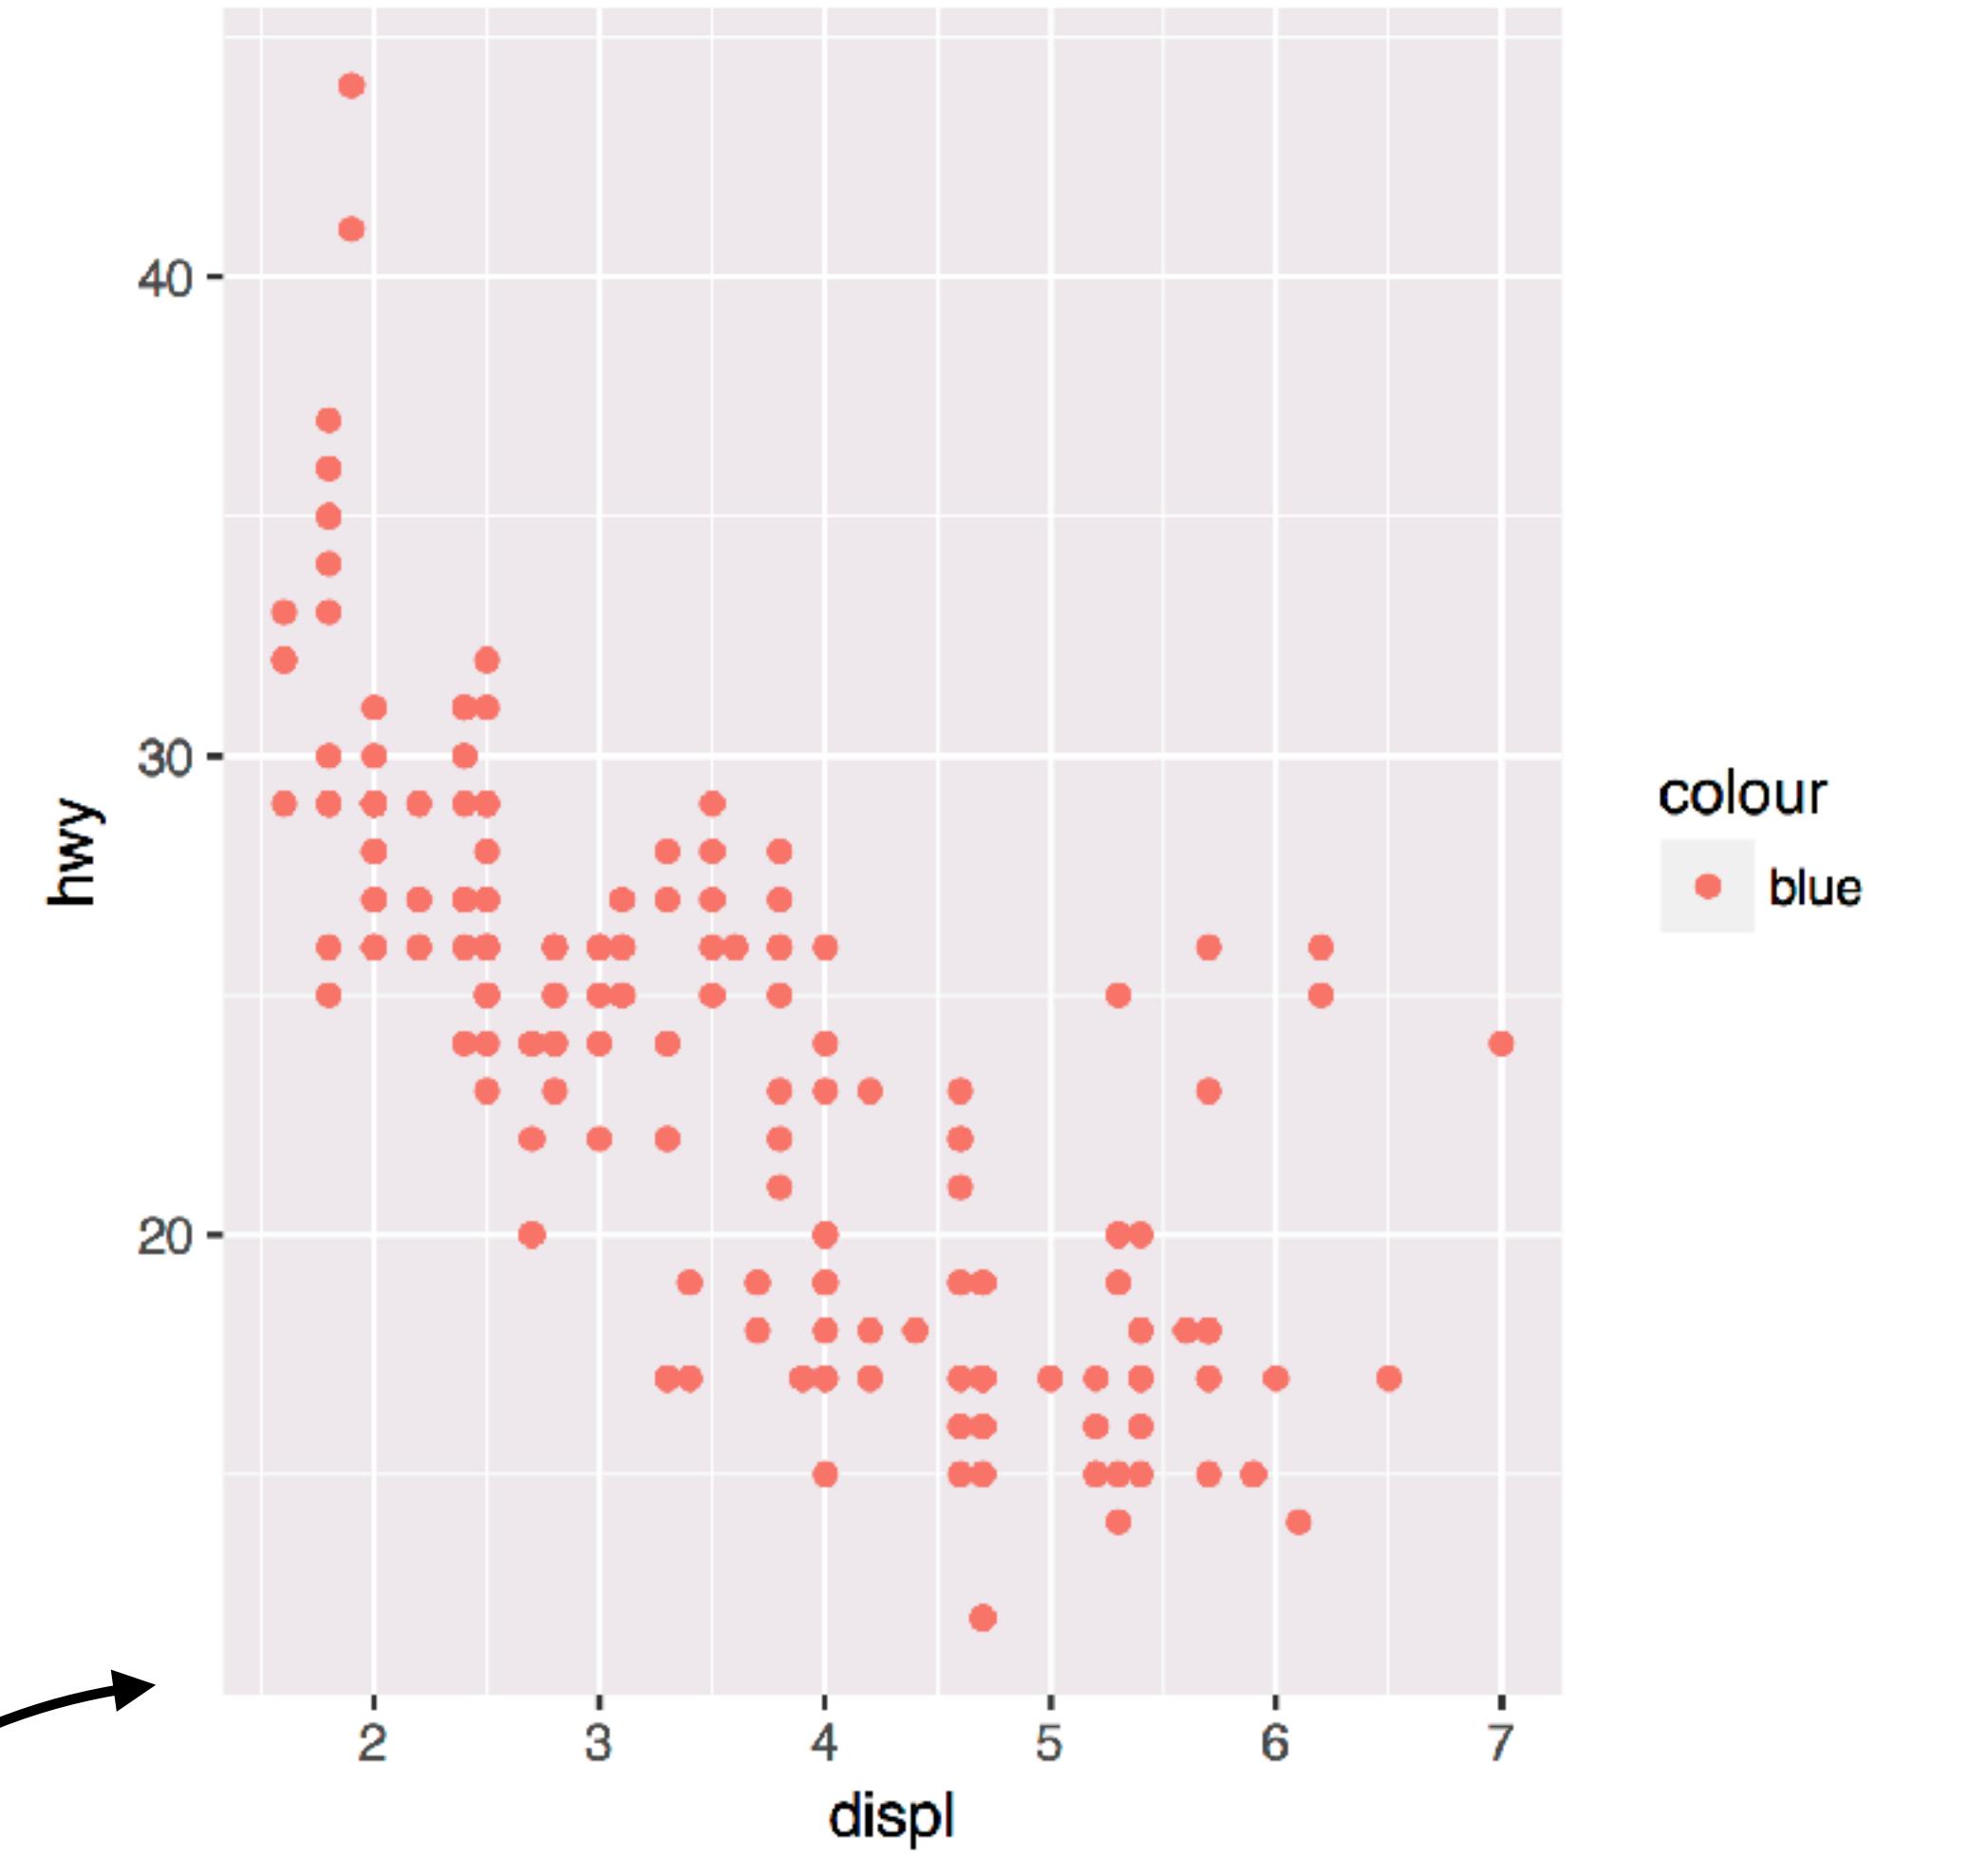

class

- 2seater
- compact
- midsize
- minivan
- pickup
- subcompact
- SUV

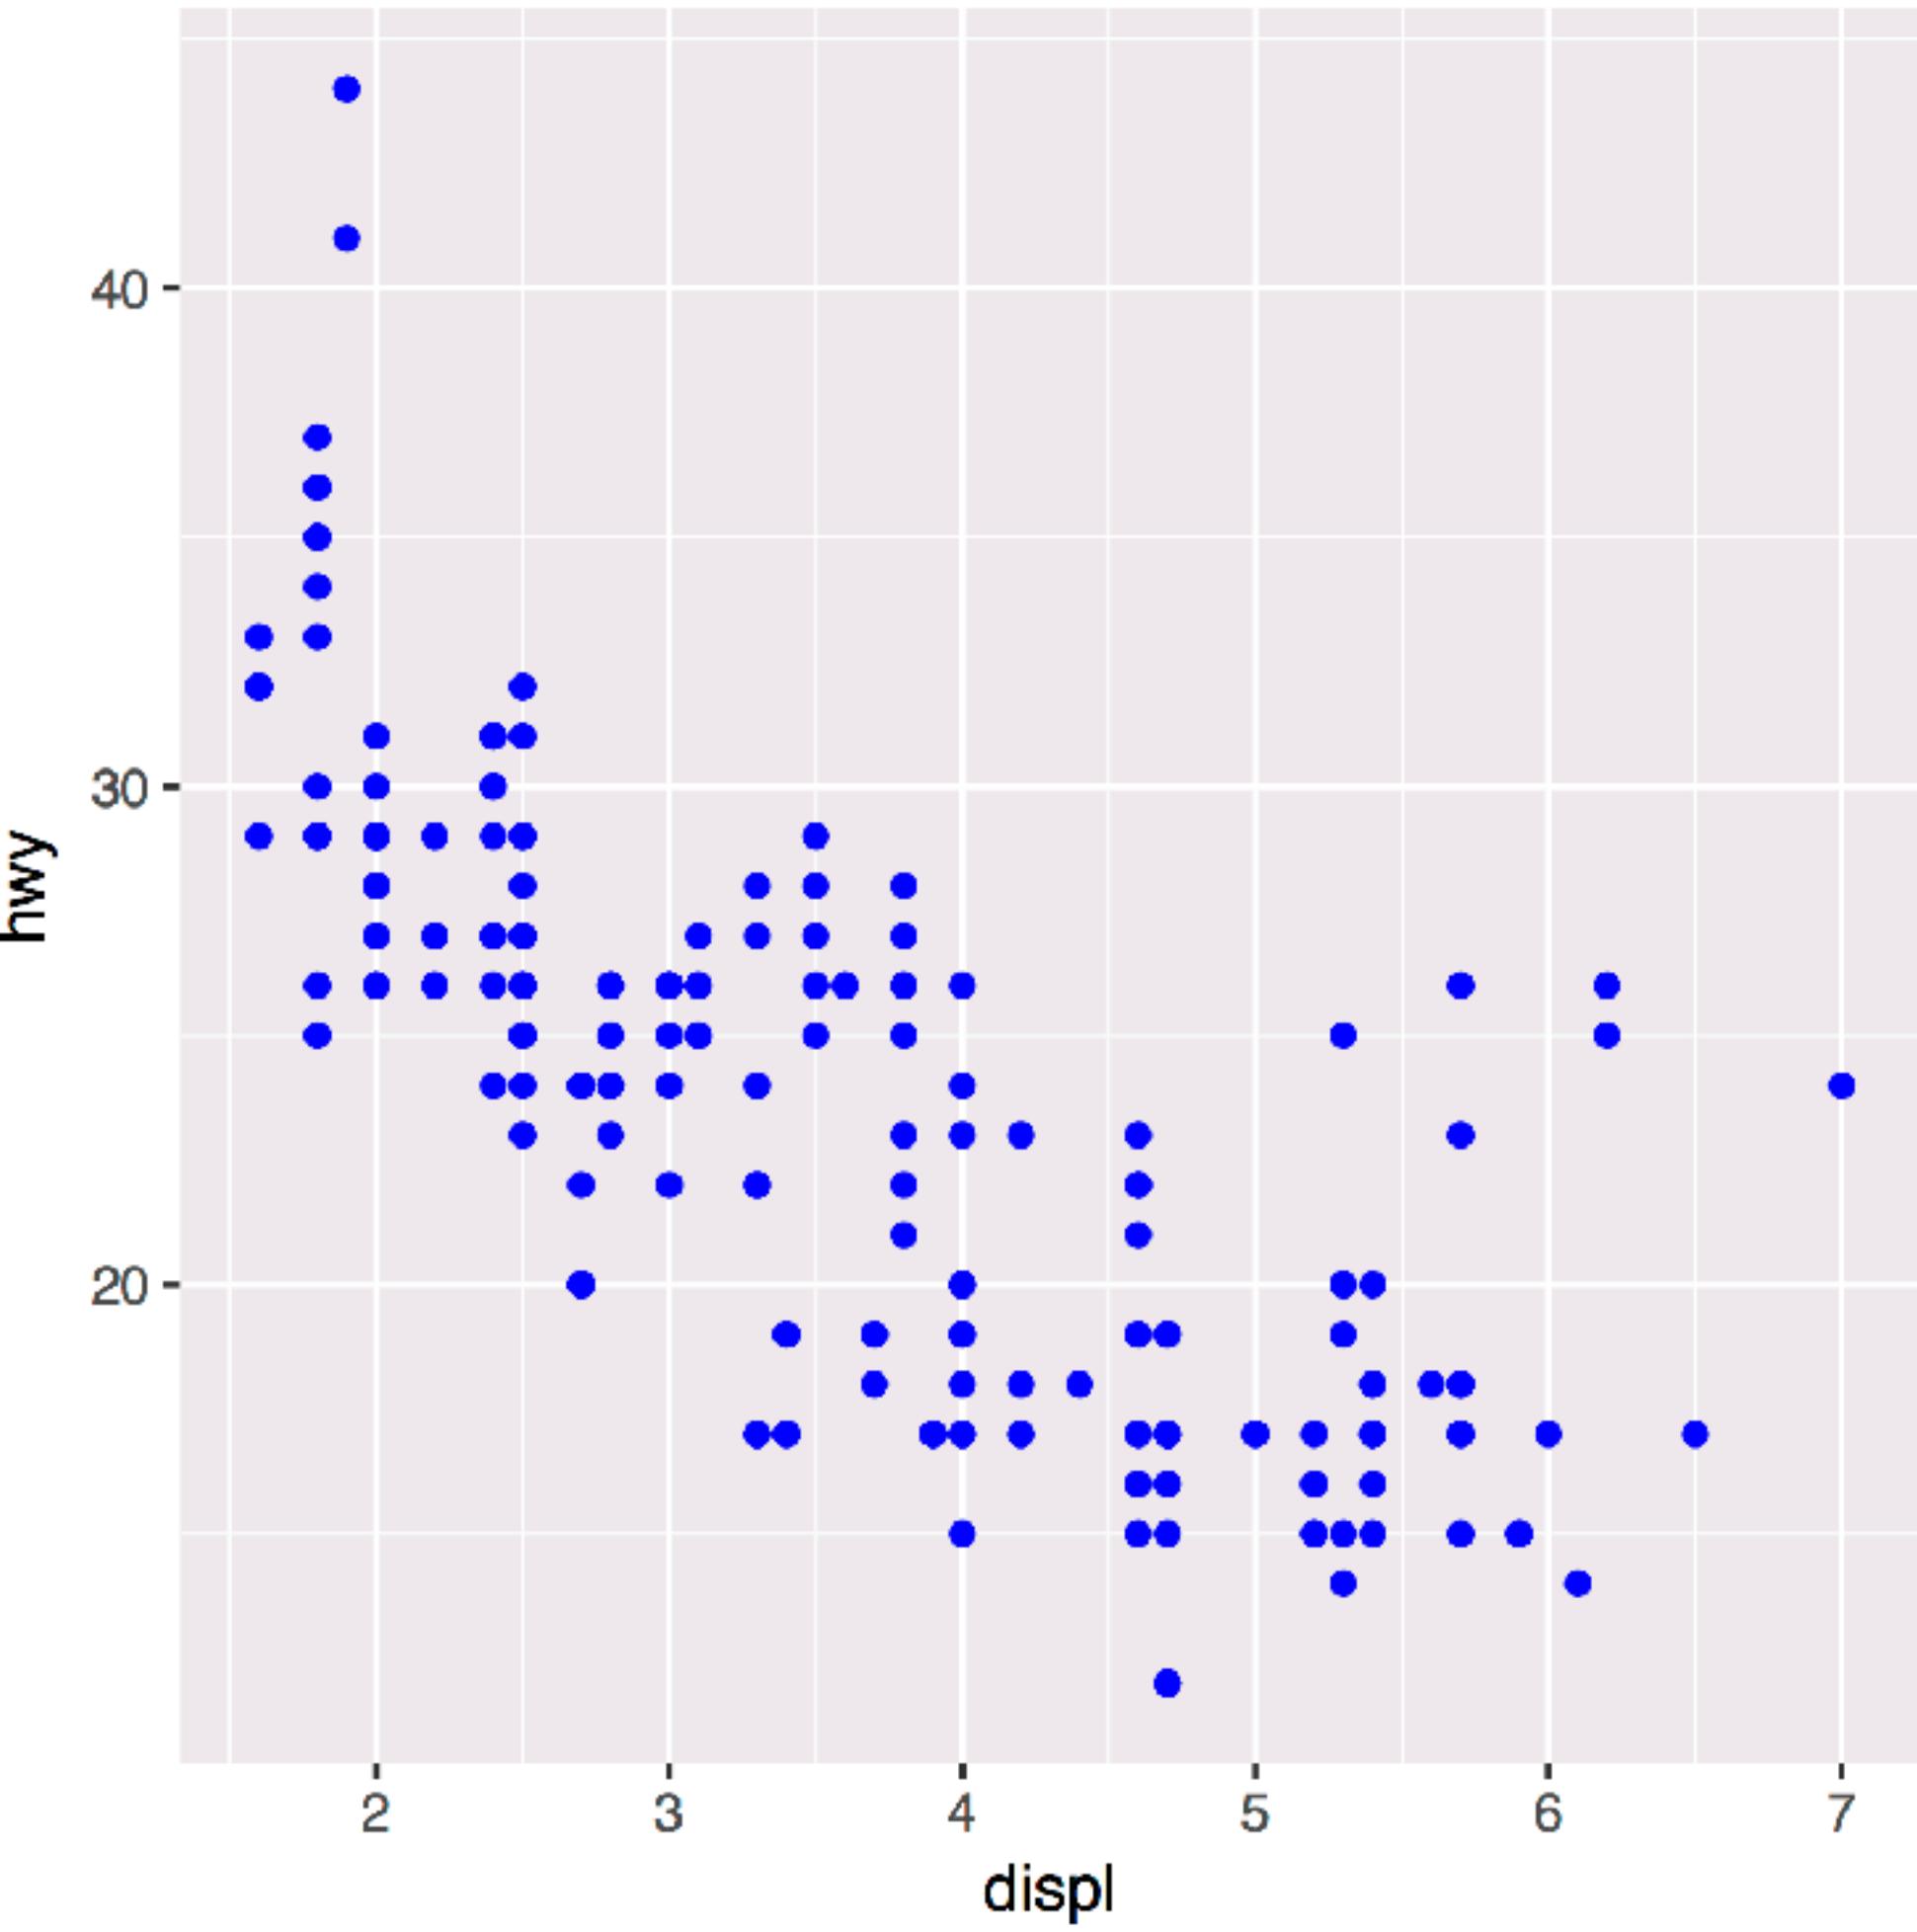

```
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, color = class))
```

```
ggplot(mpg) + geom_point(aes(x = displ, y = hwy), color = "blue")
```

colour
● blue

```
ggplot(mpg) + geom_point(aes(x = displ, y = hwy, color = "blue"))
```

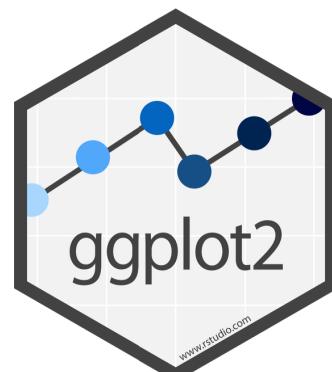

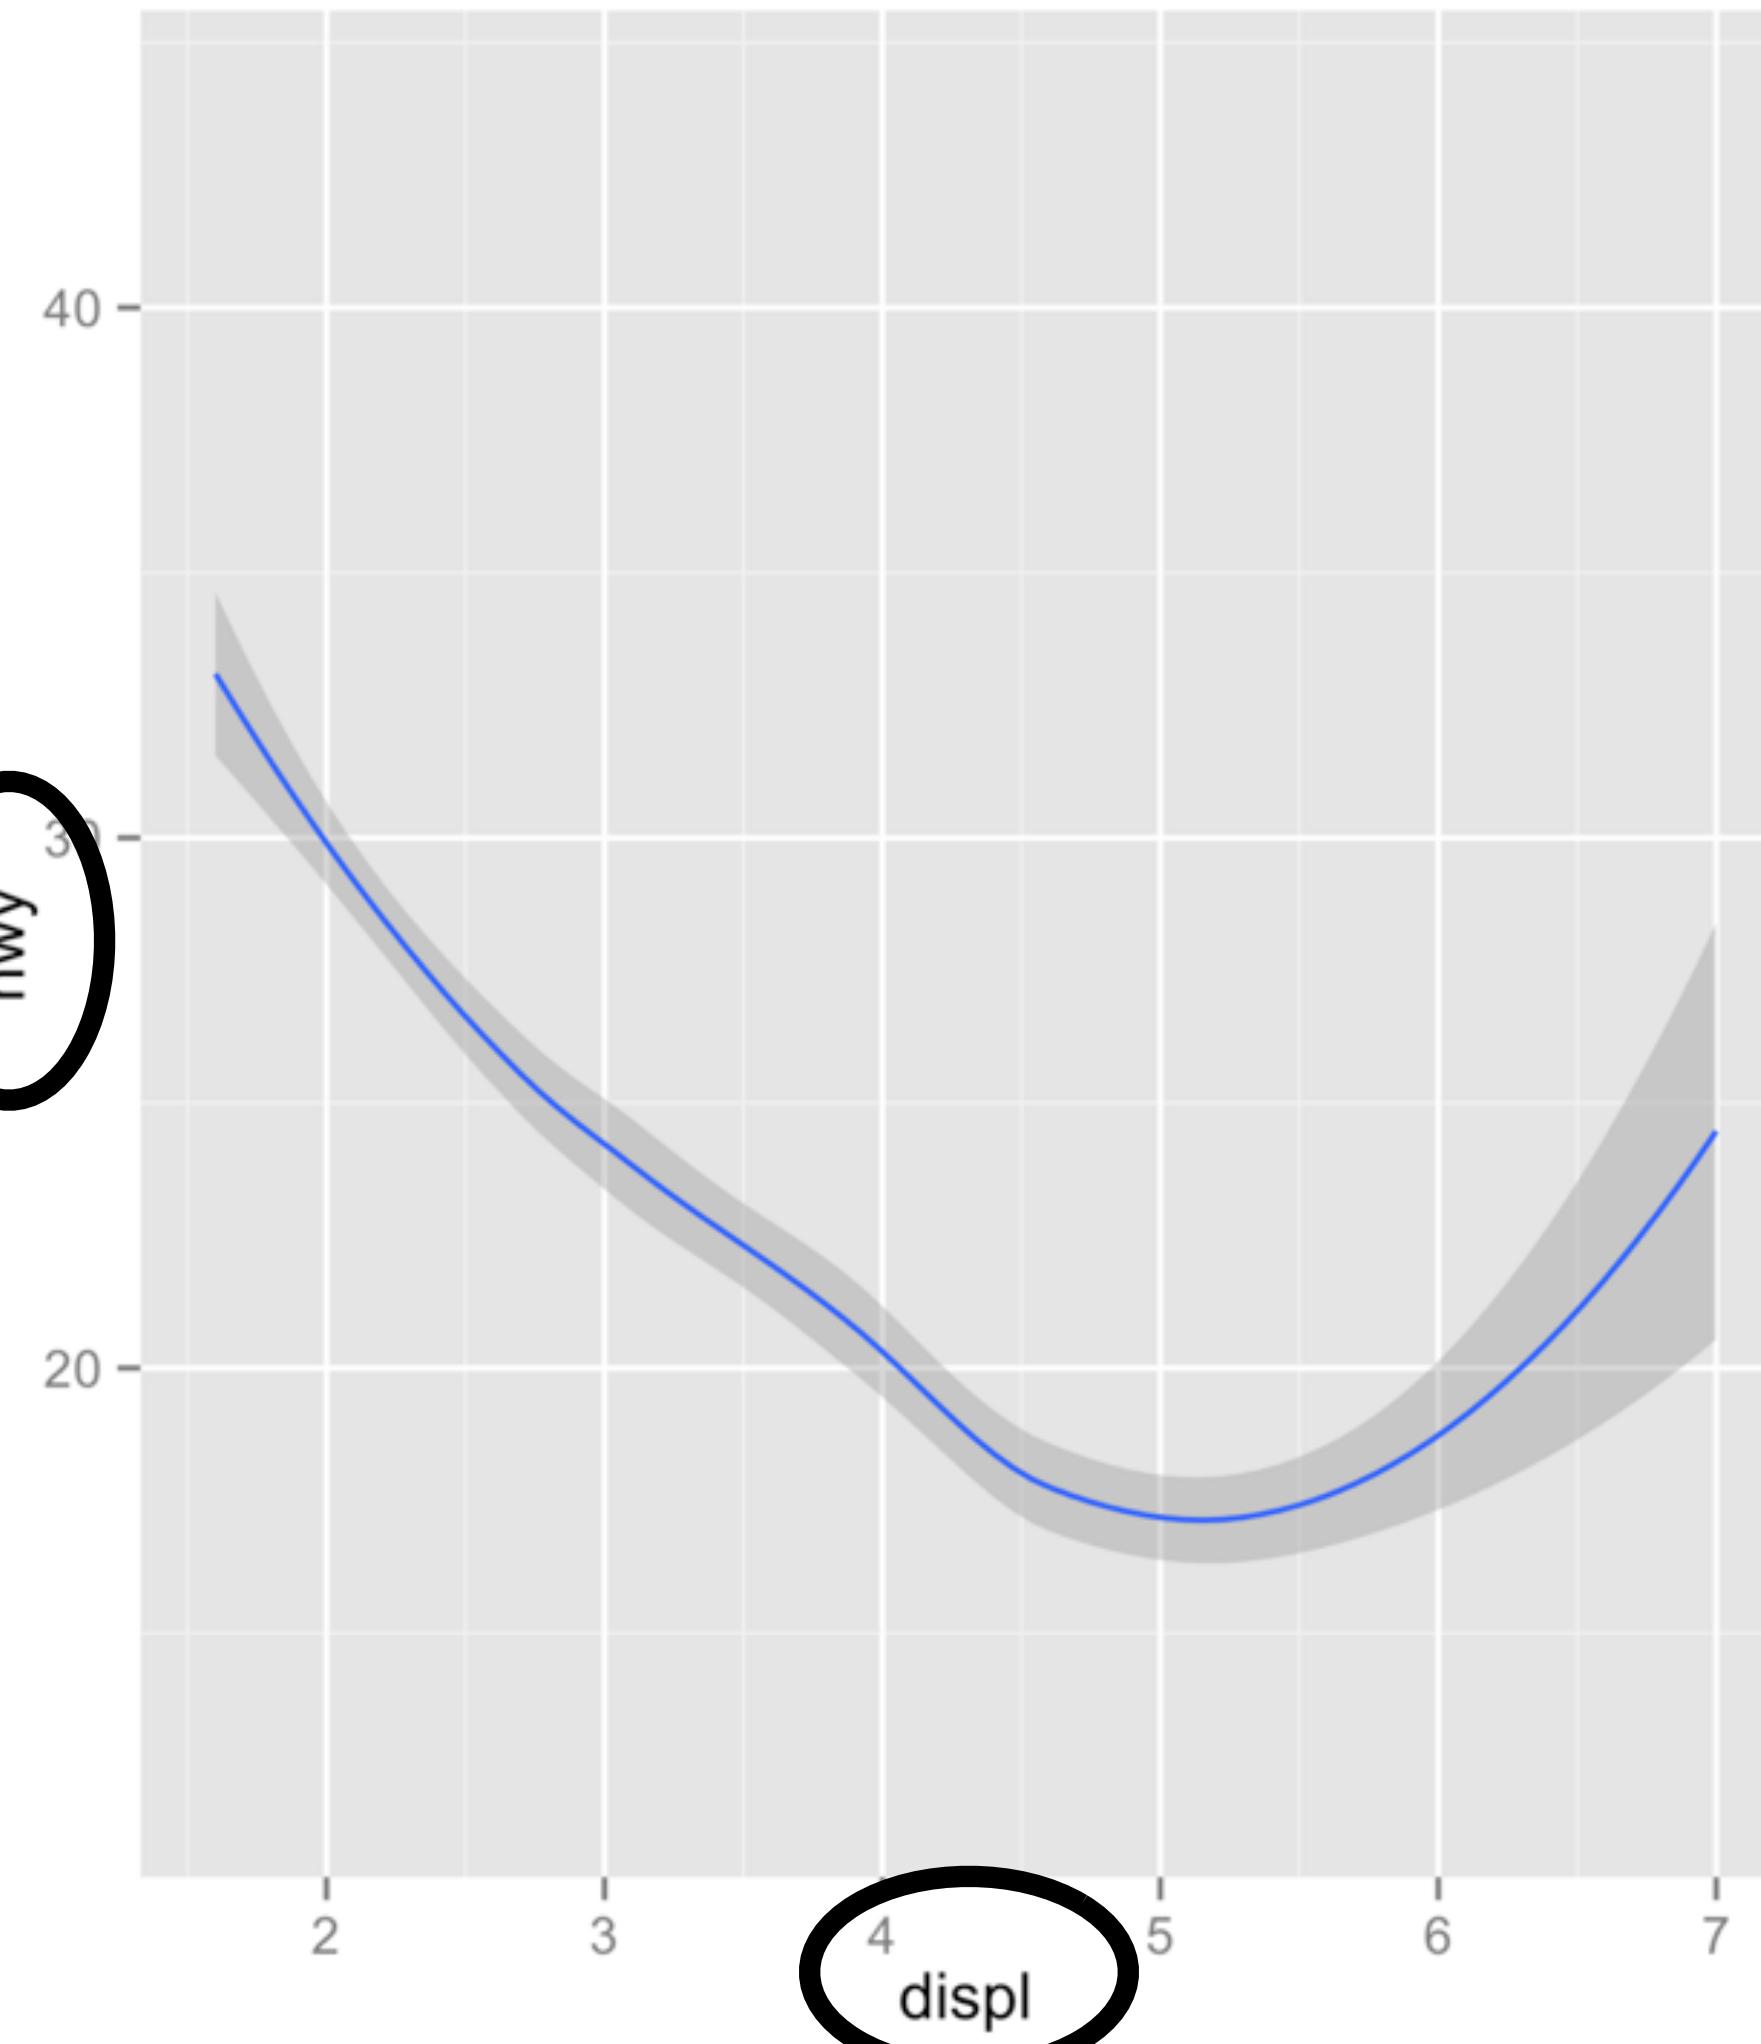

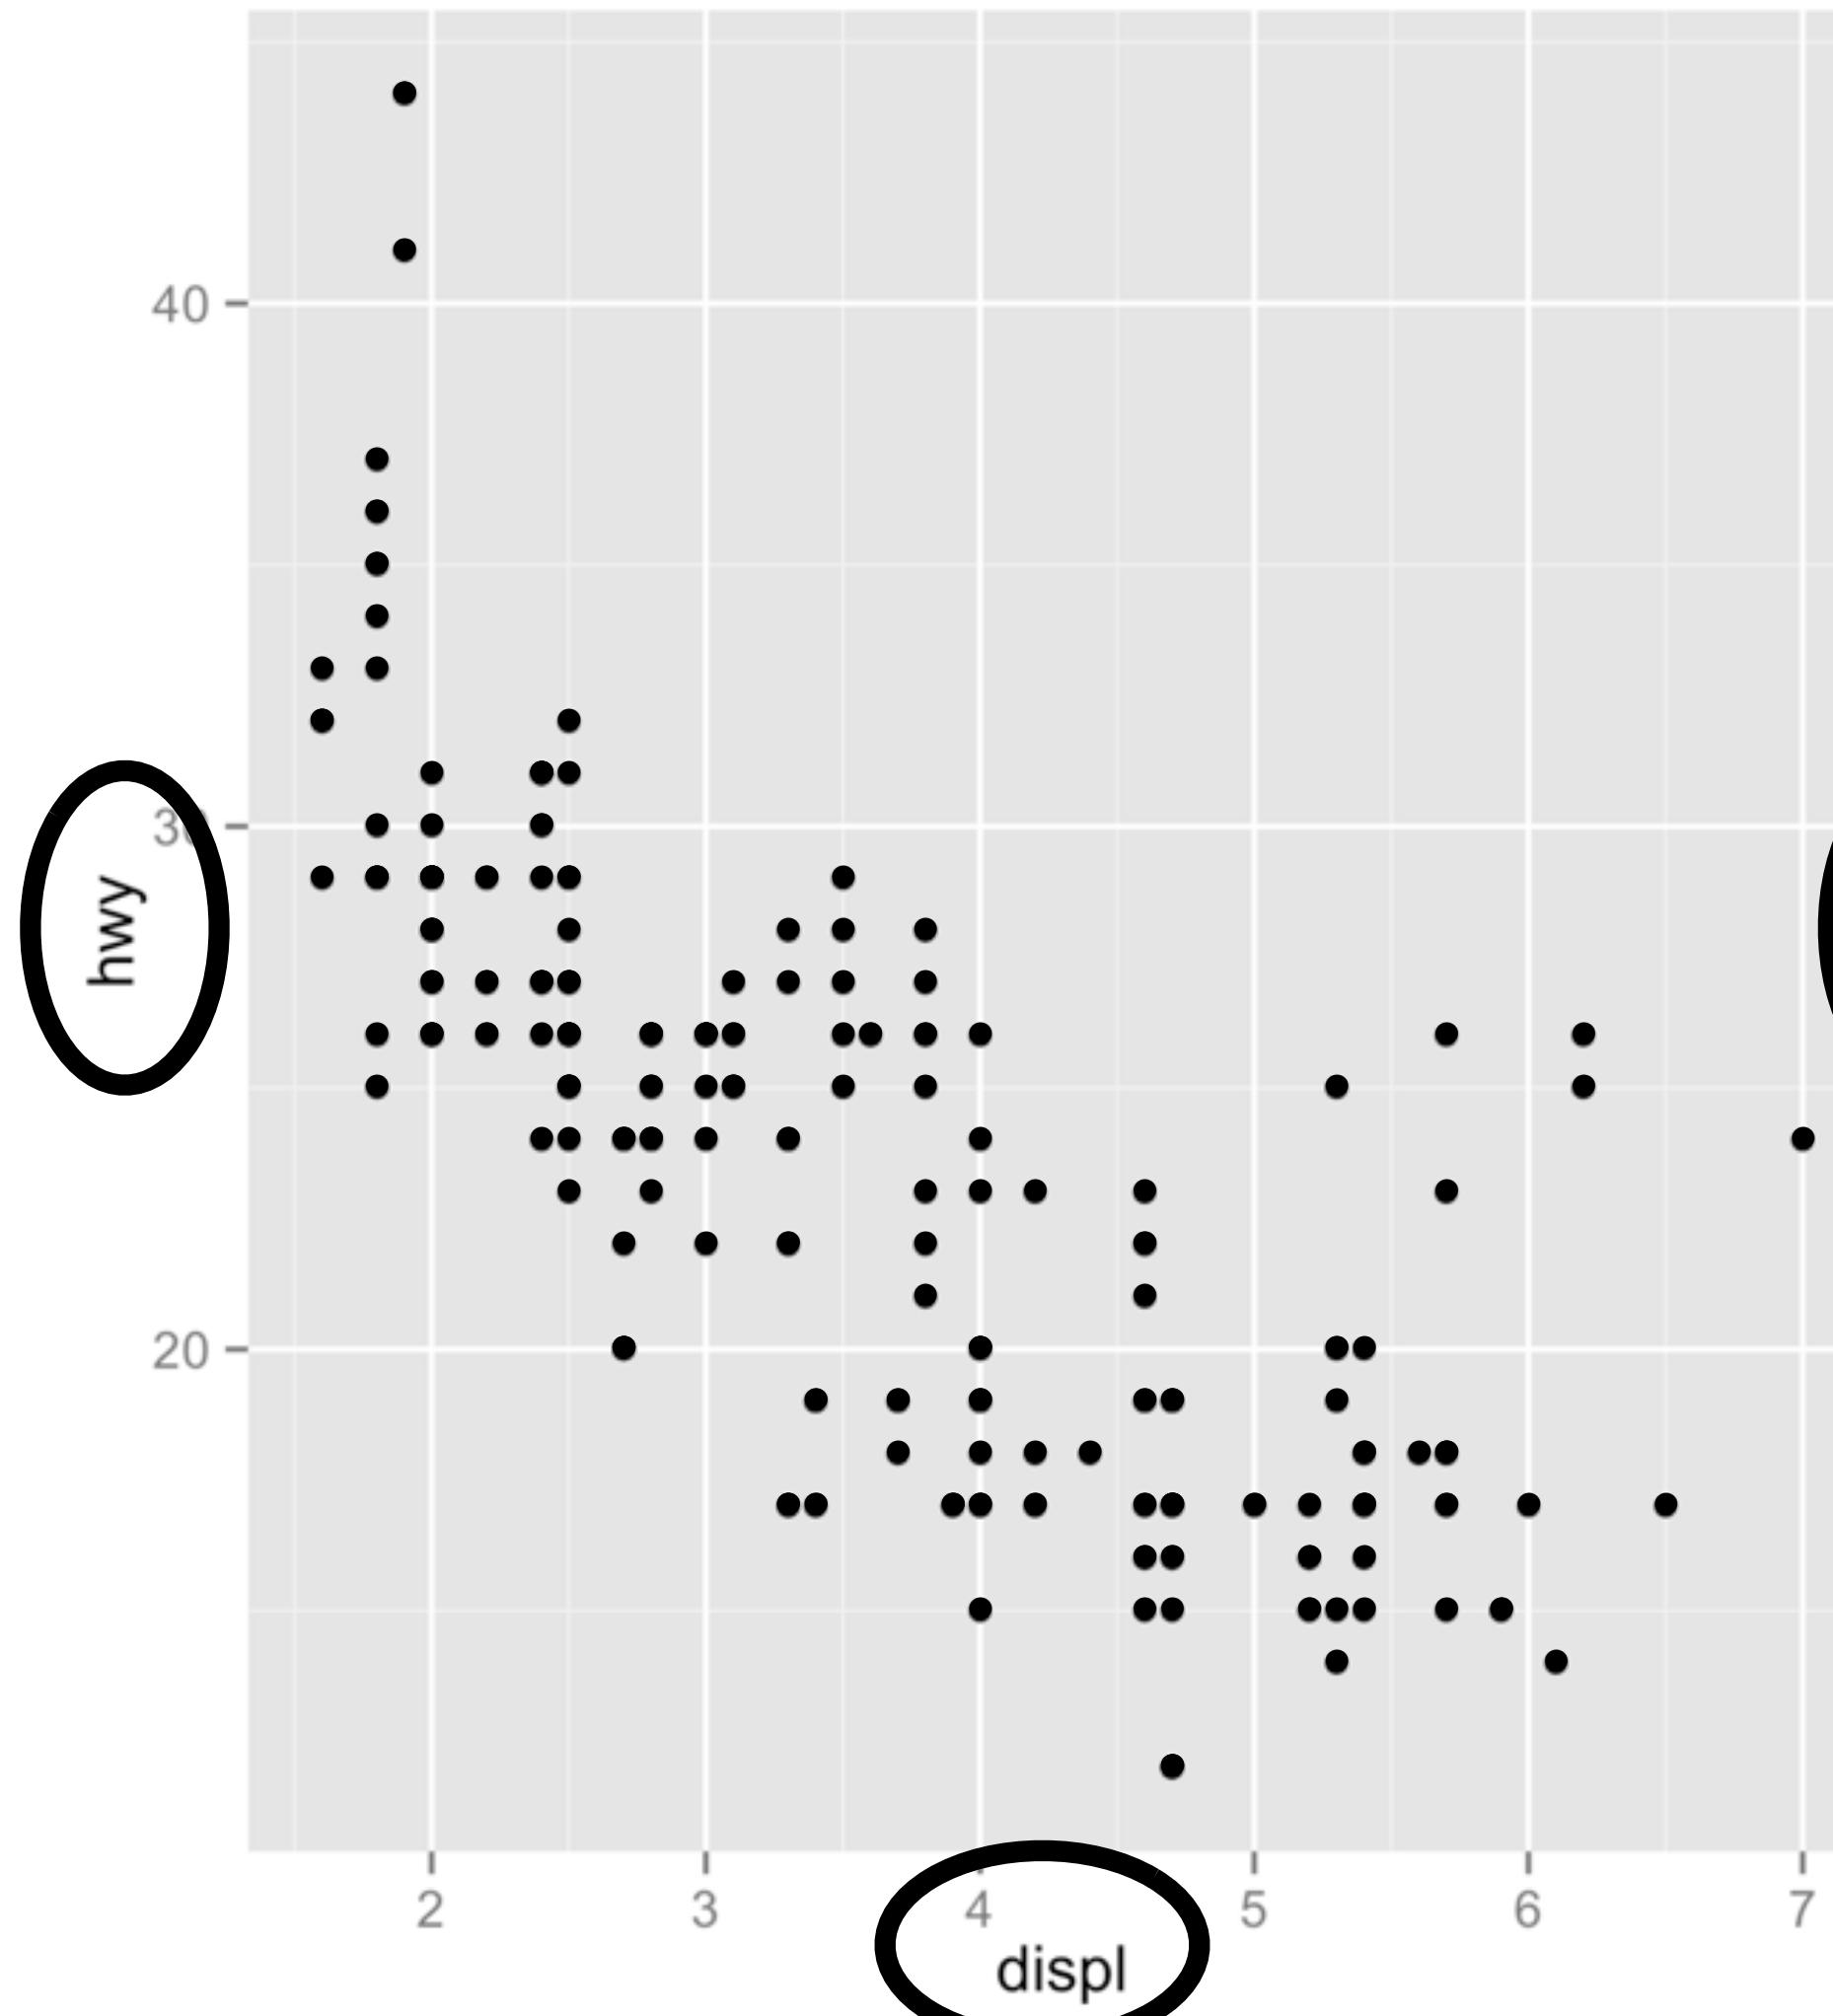

```
ggplot(mpg) + geom_point(aes(x = displ, y = hwy), color = "blue")
```

Geoms

R

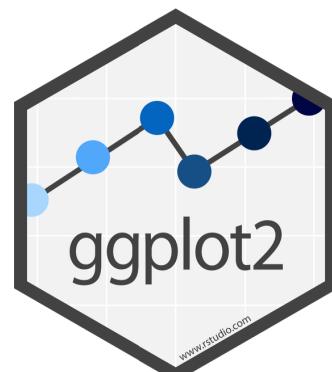

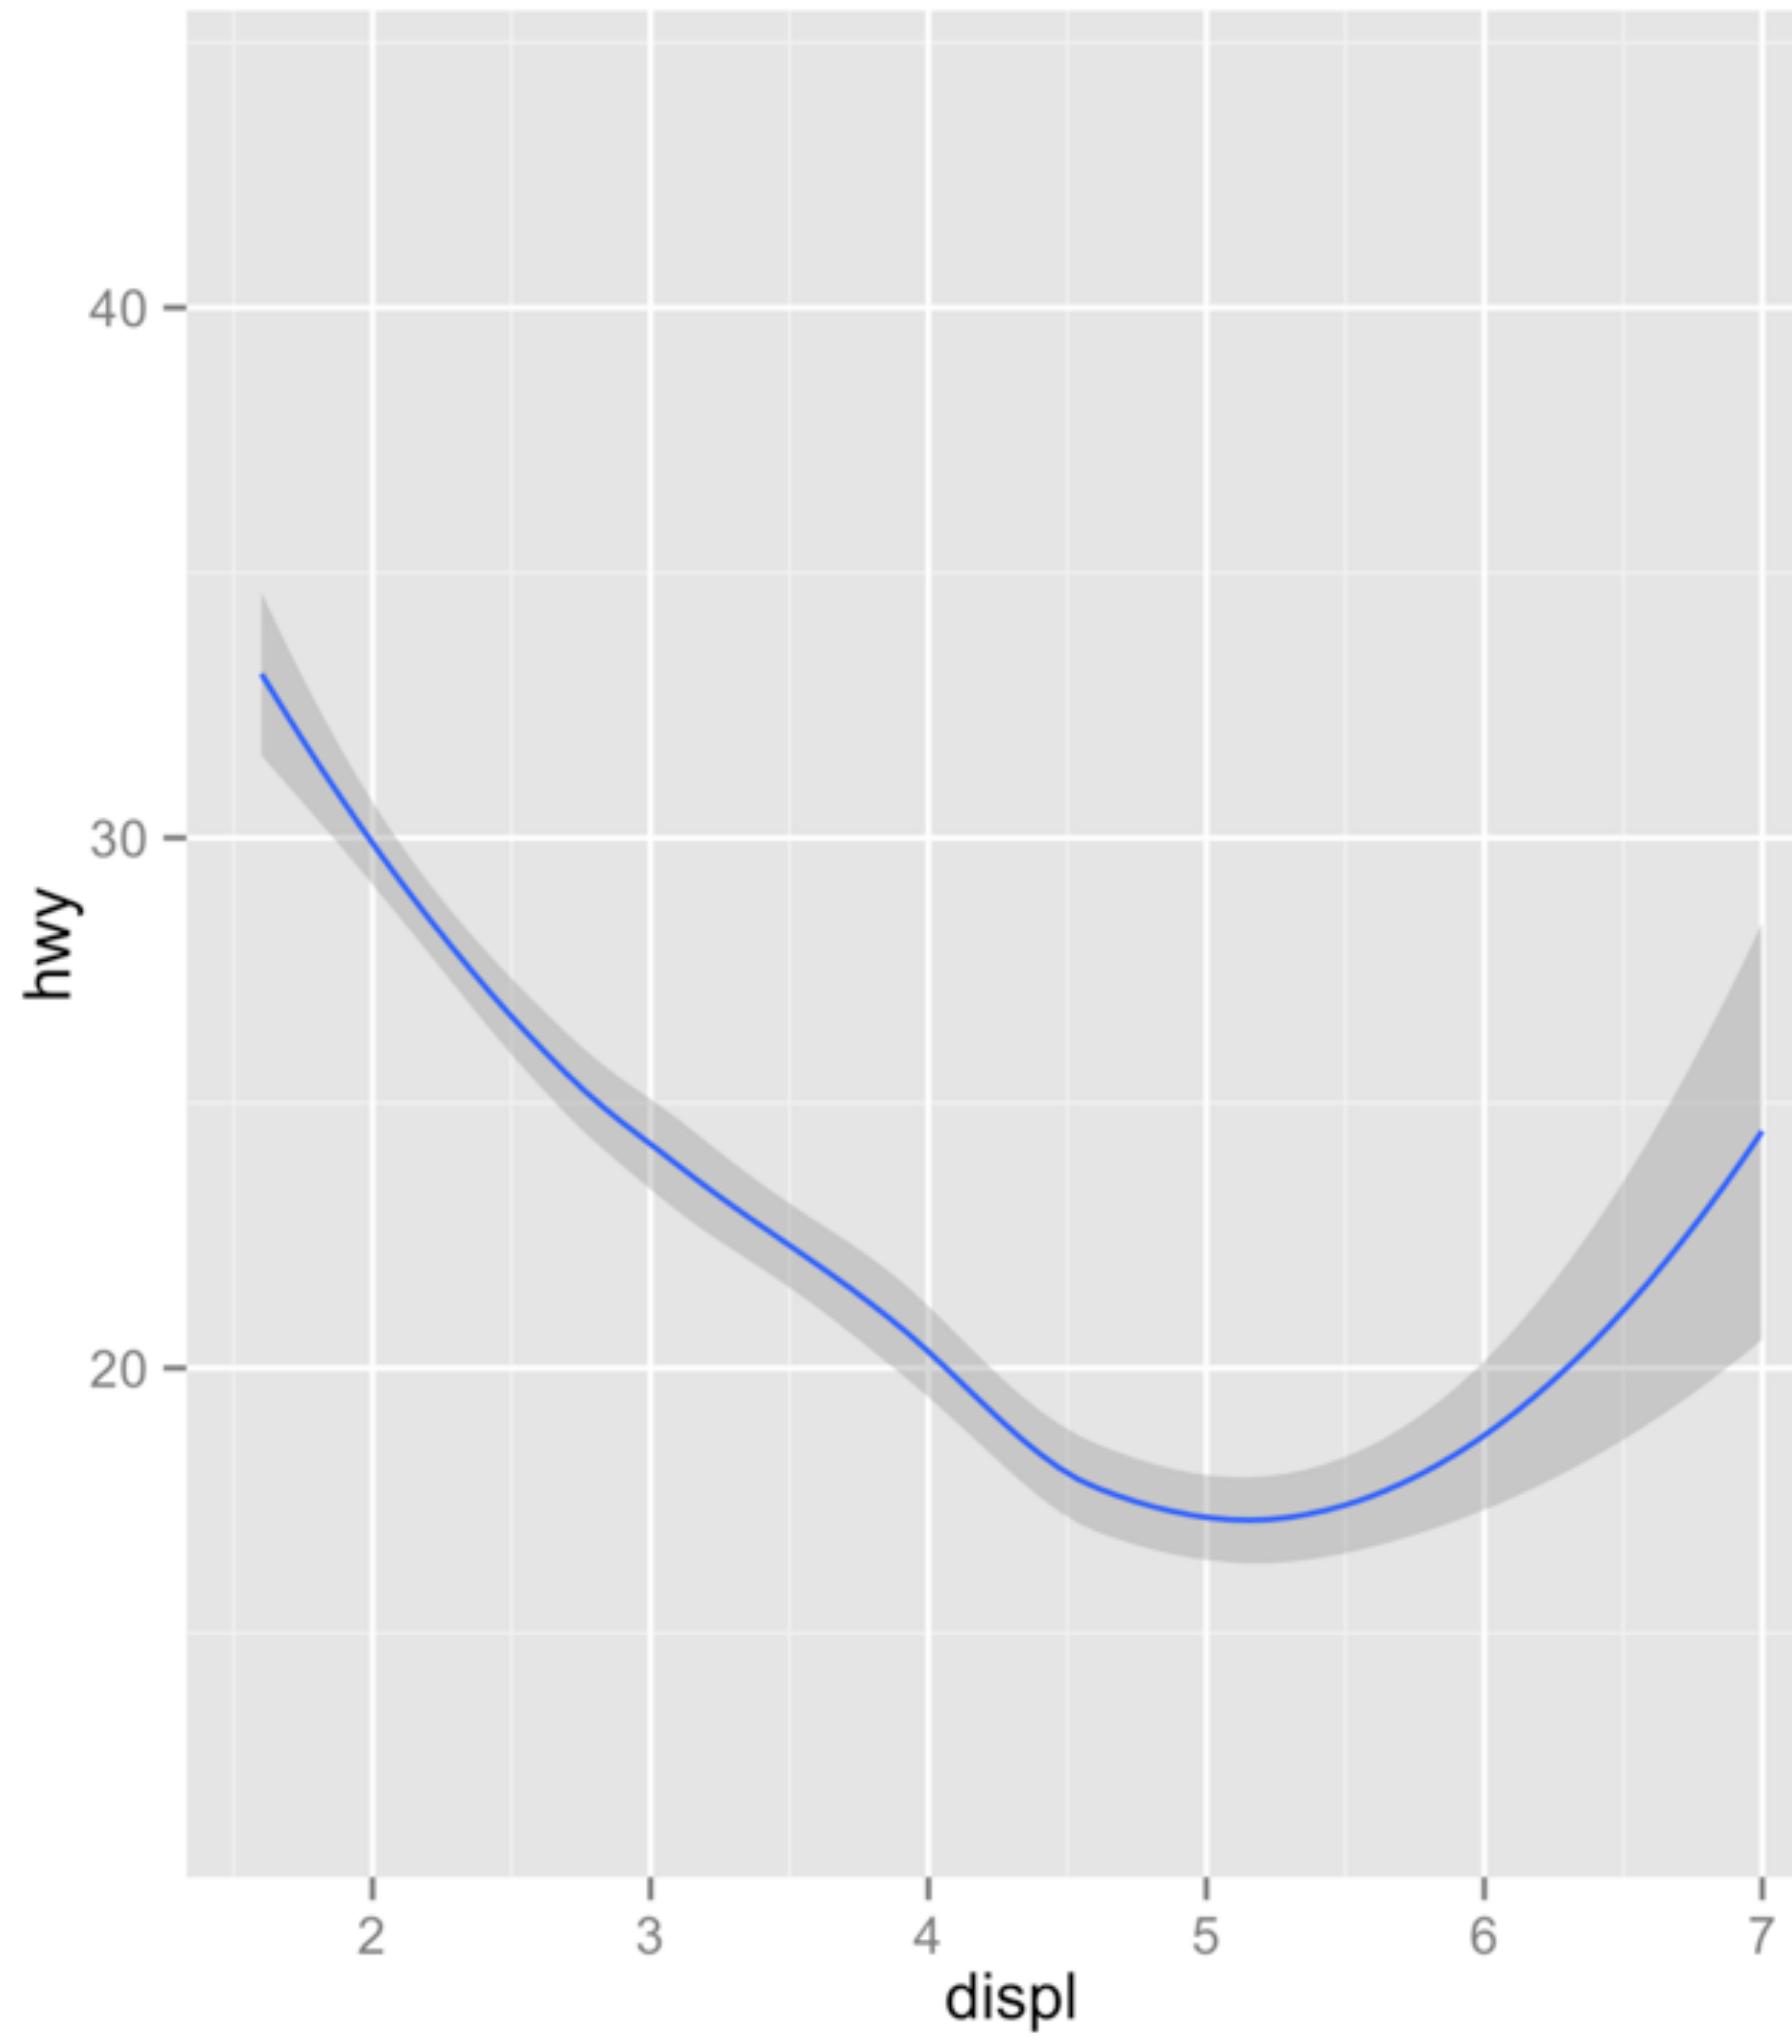

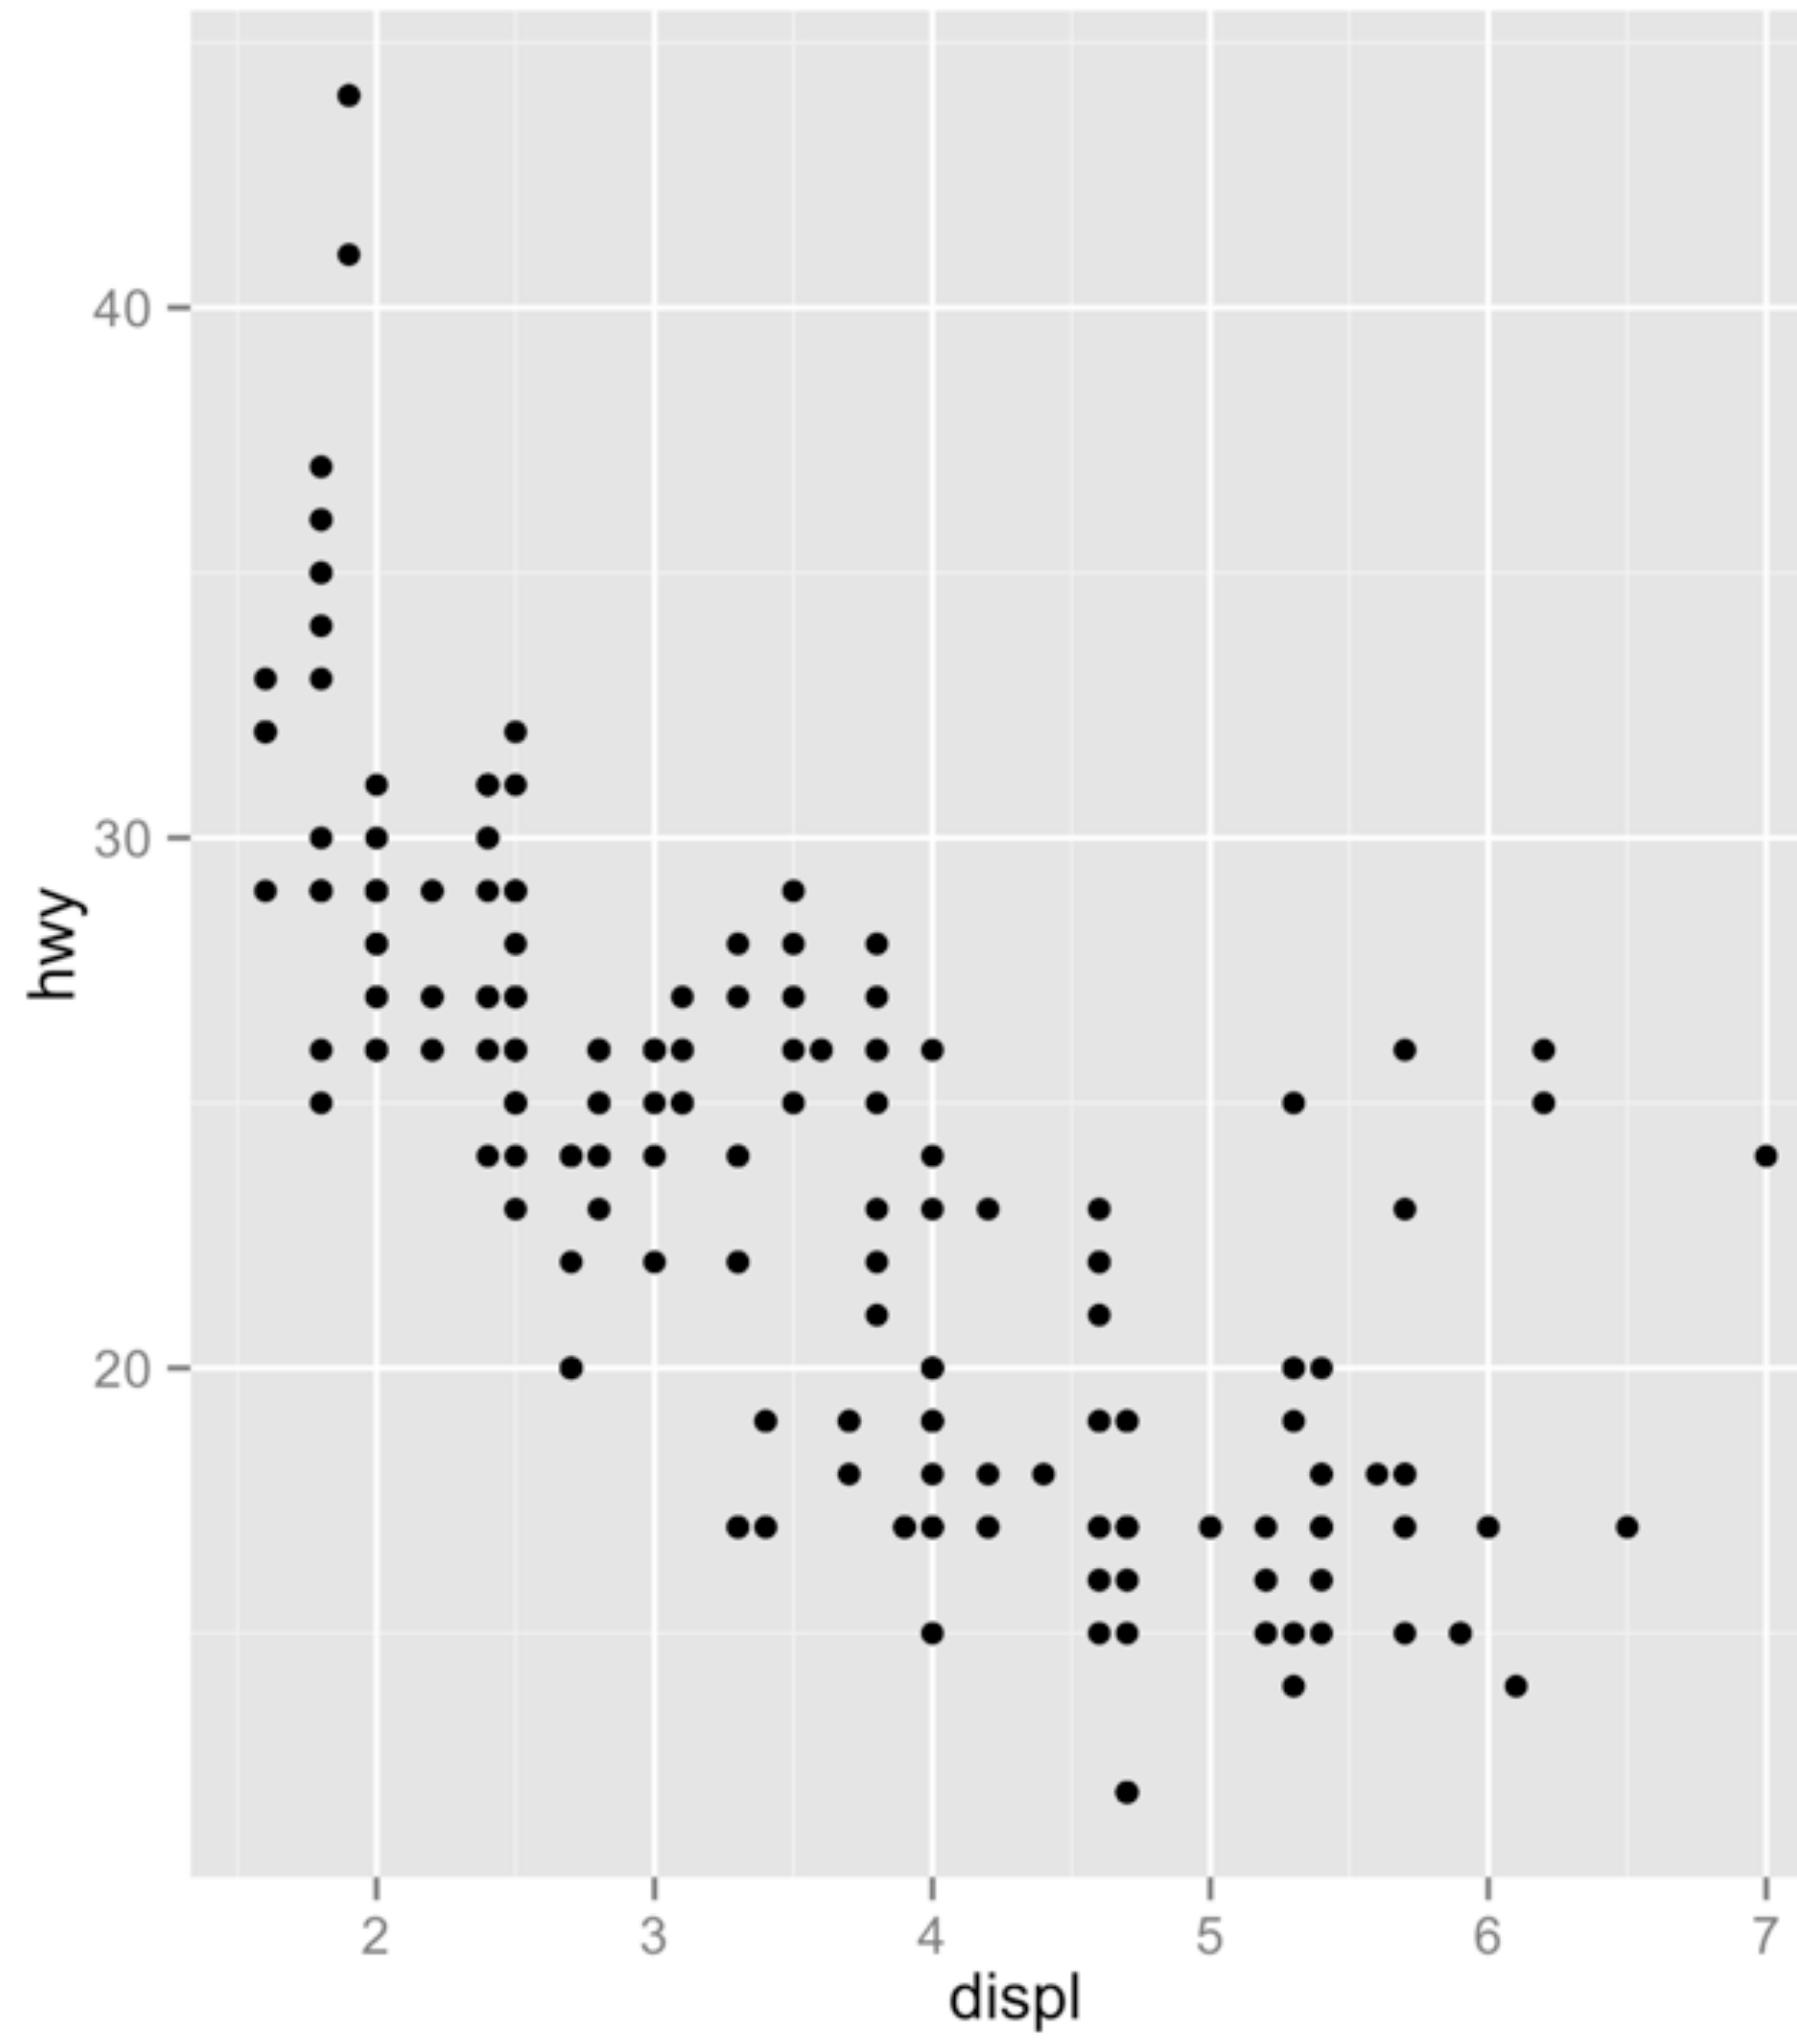

How are these plots similar?

Same: x var , y var , data

How are these plots different?

Different: geometric object (geom),
e.g. the visual object used to represent the data

geoms

```
ggplot(data = <DATA>) +  
<GEOM_FUNCTION>(mapping = aes(<MAPPINGS>))
```

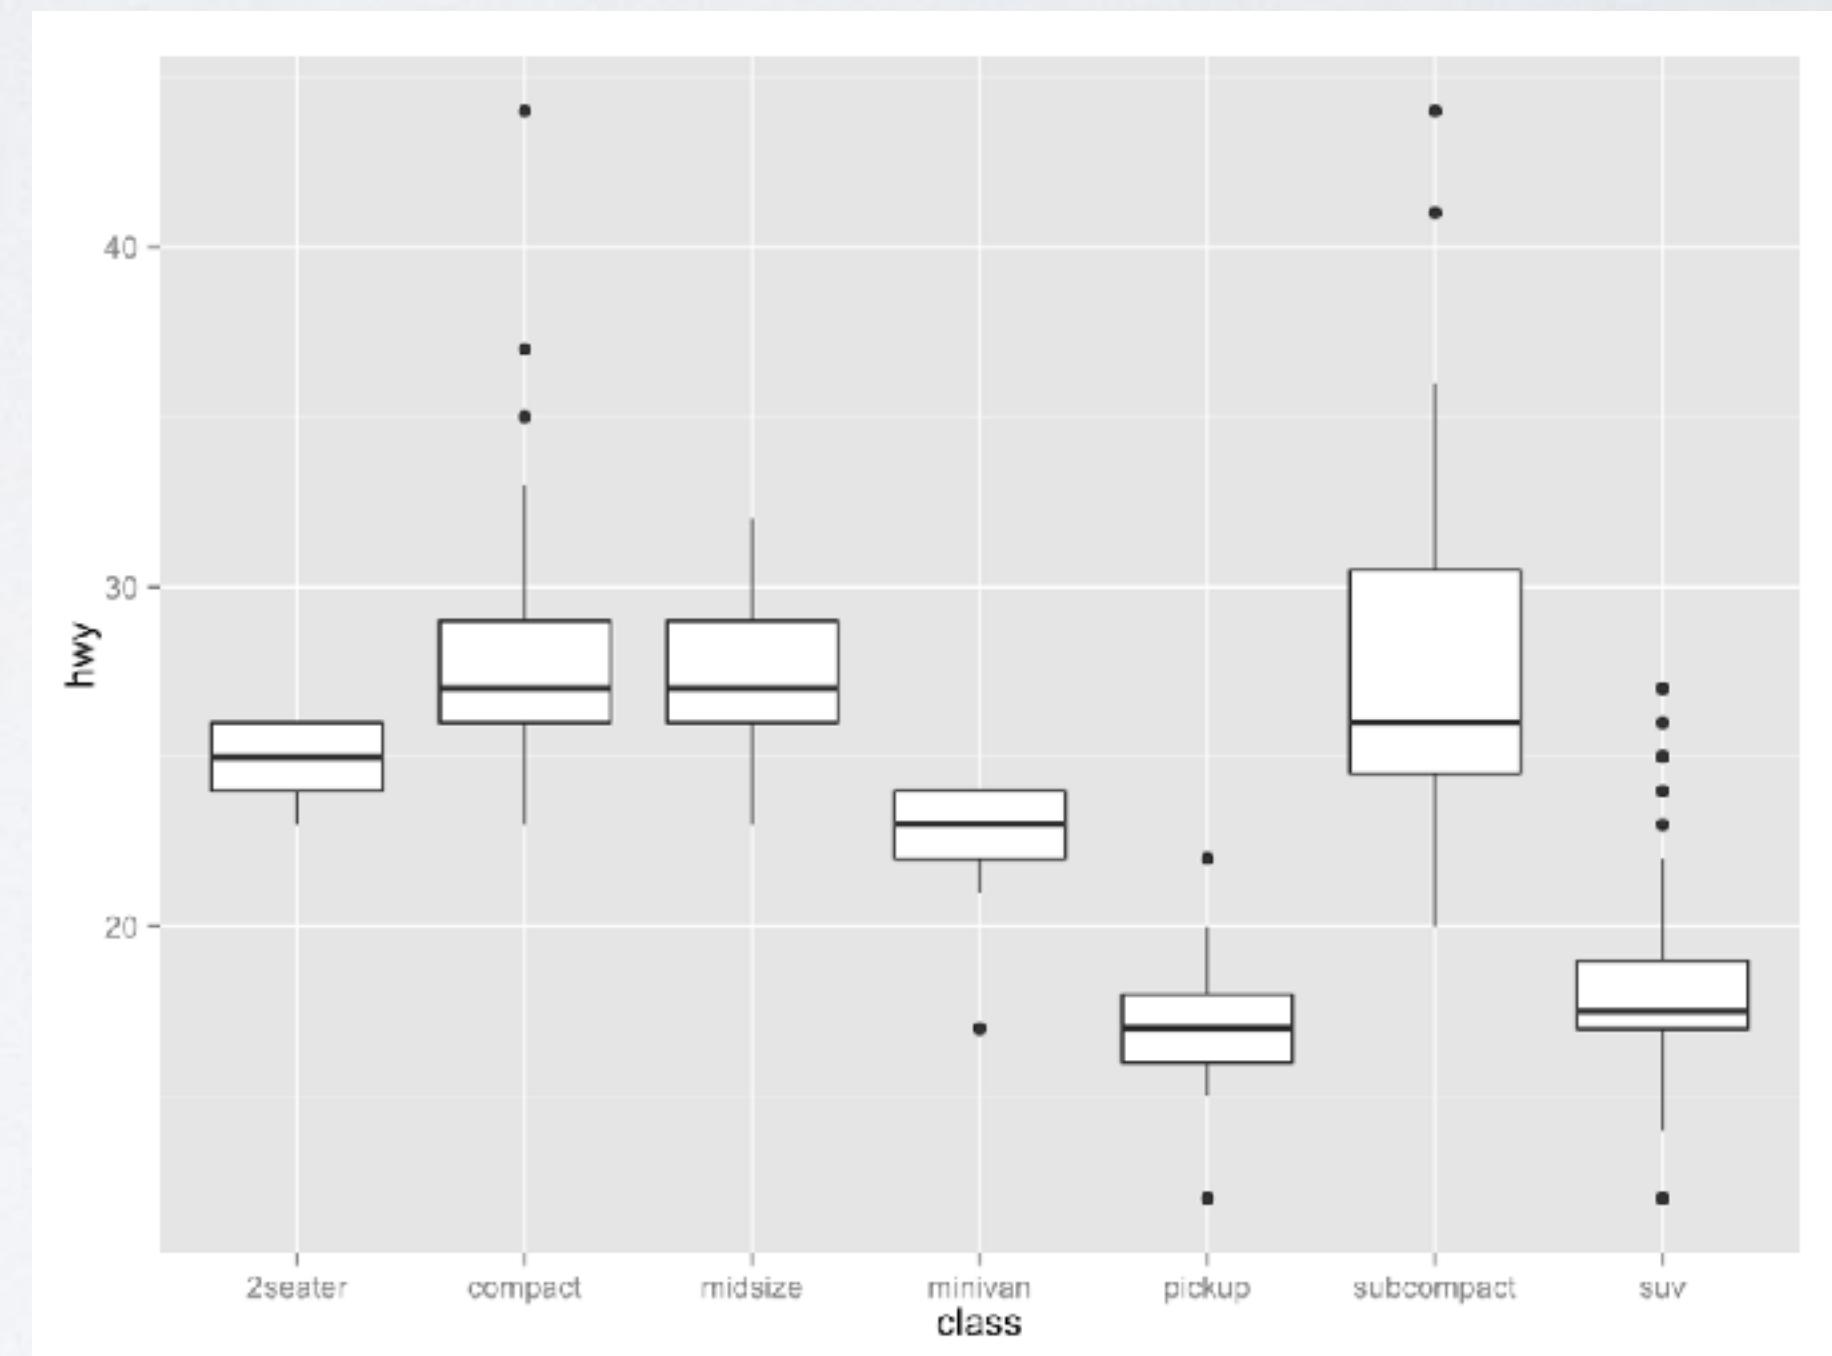

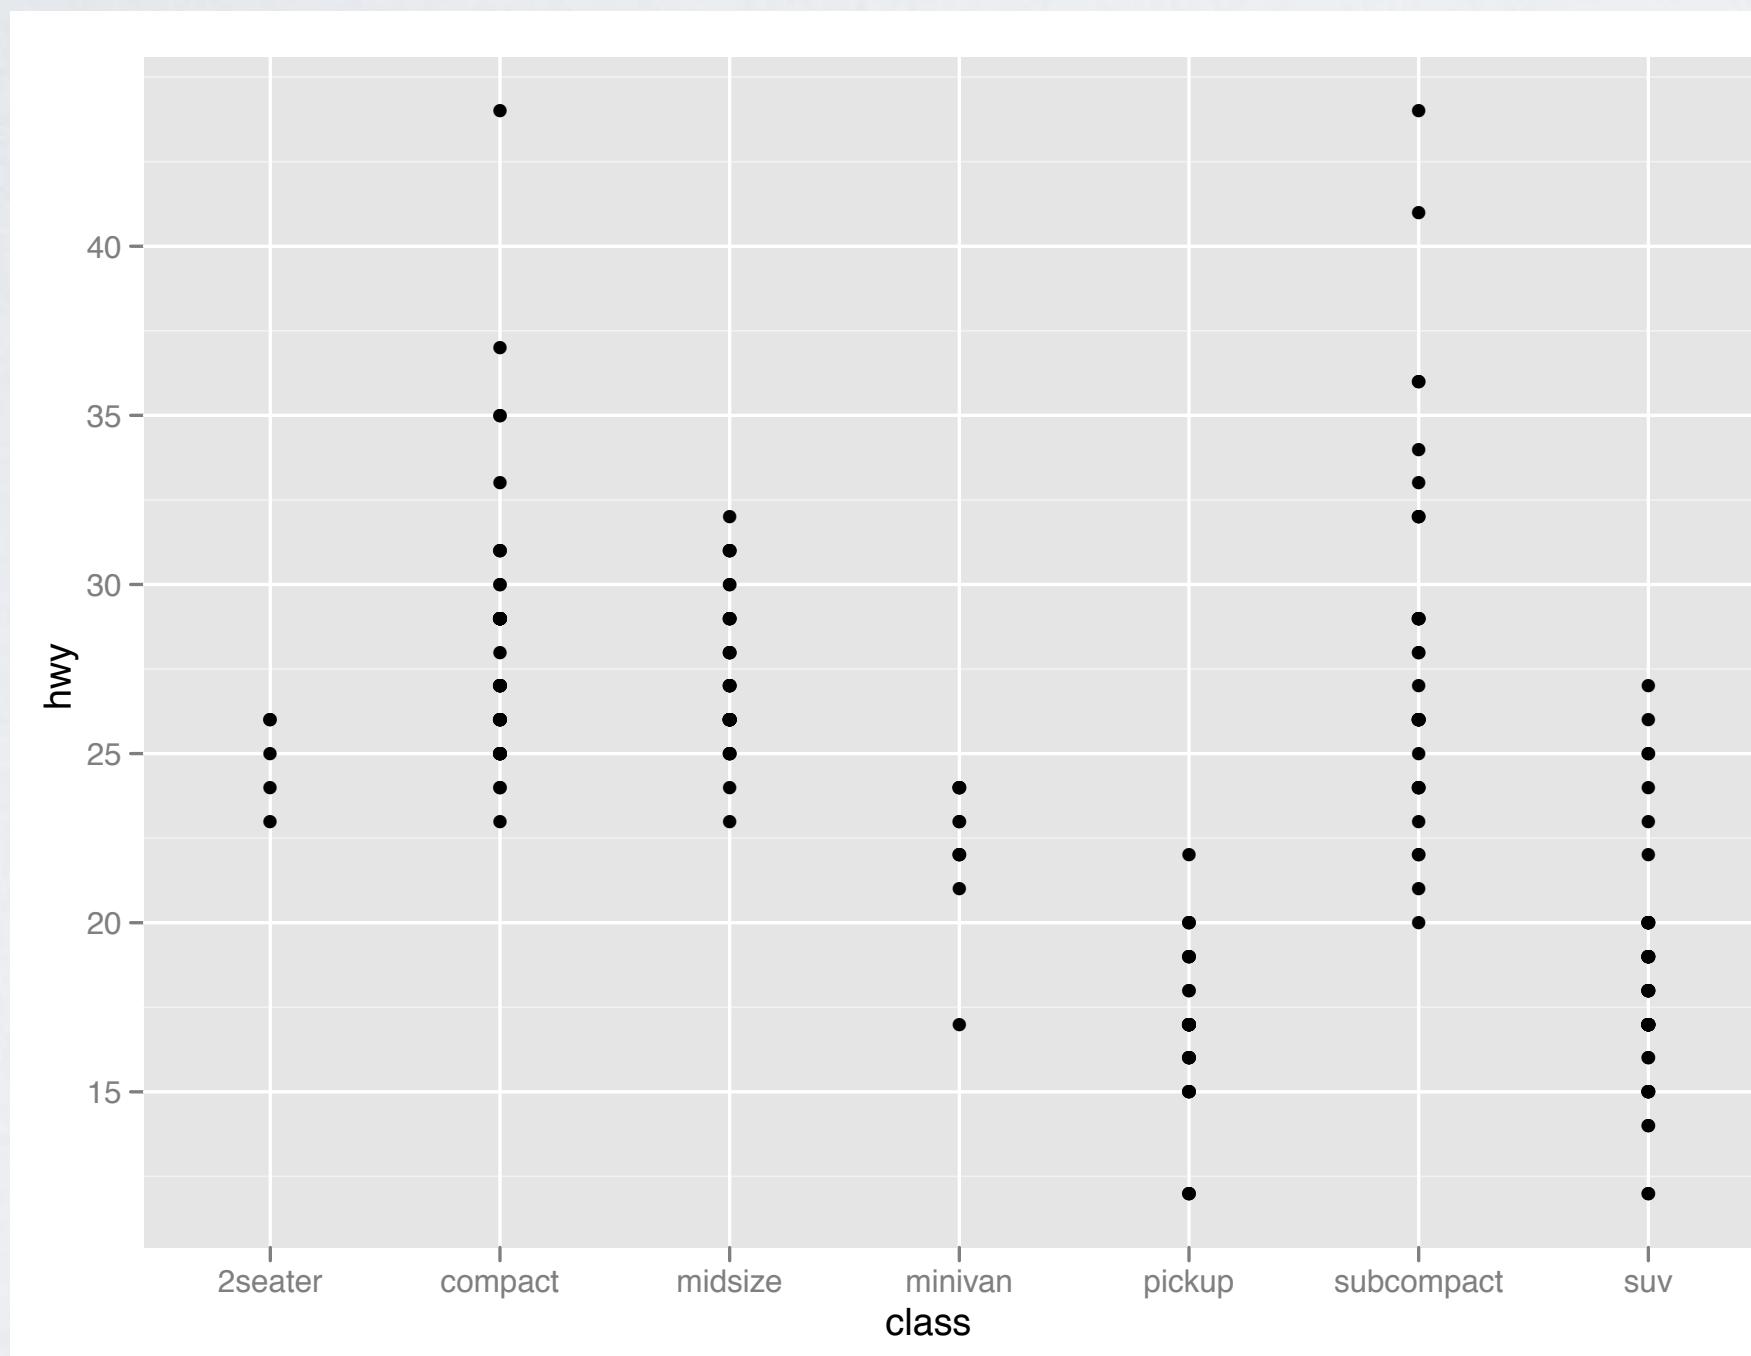

Your Turn

Pair up.

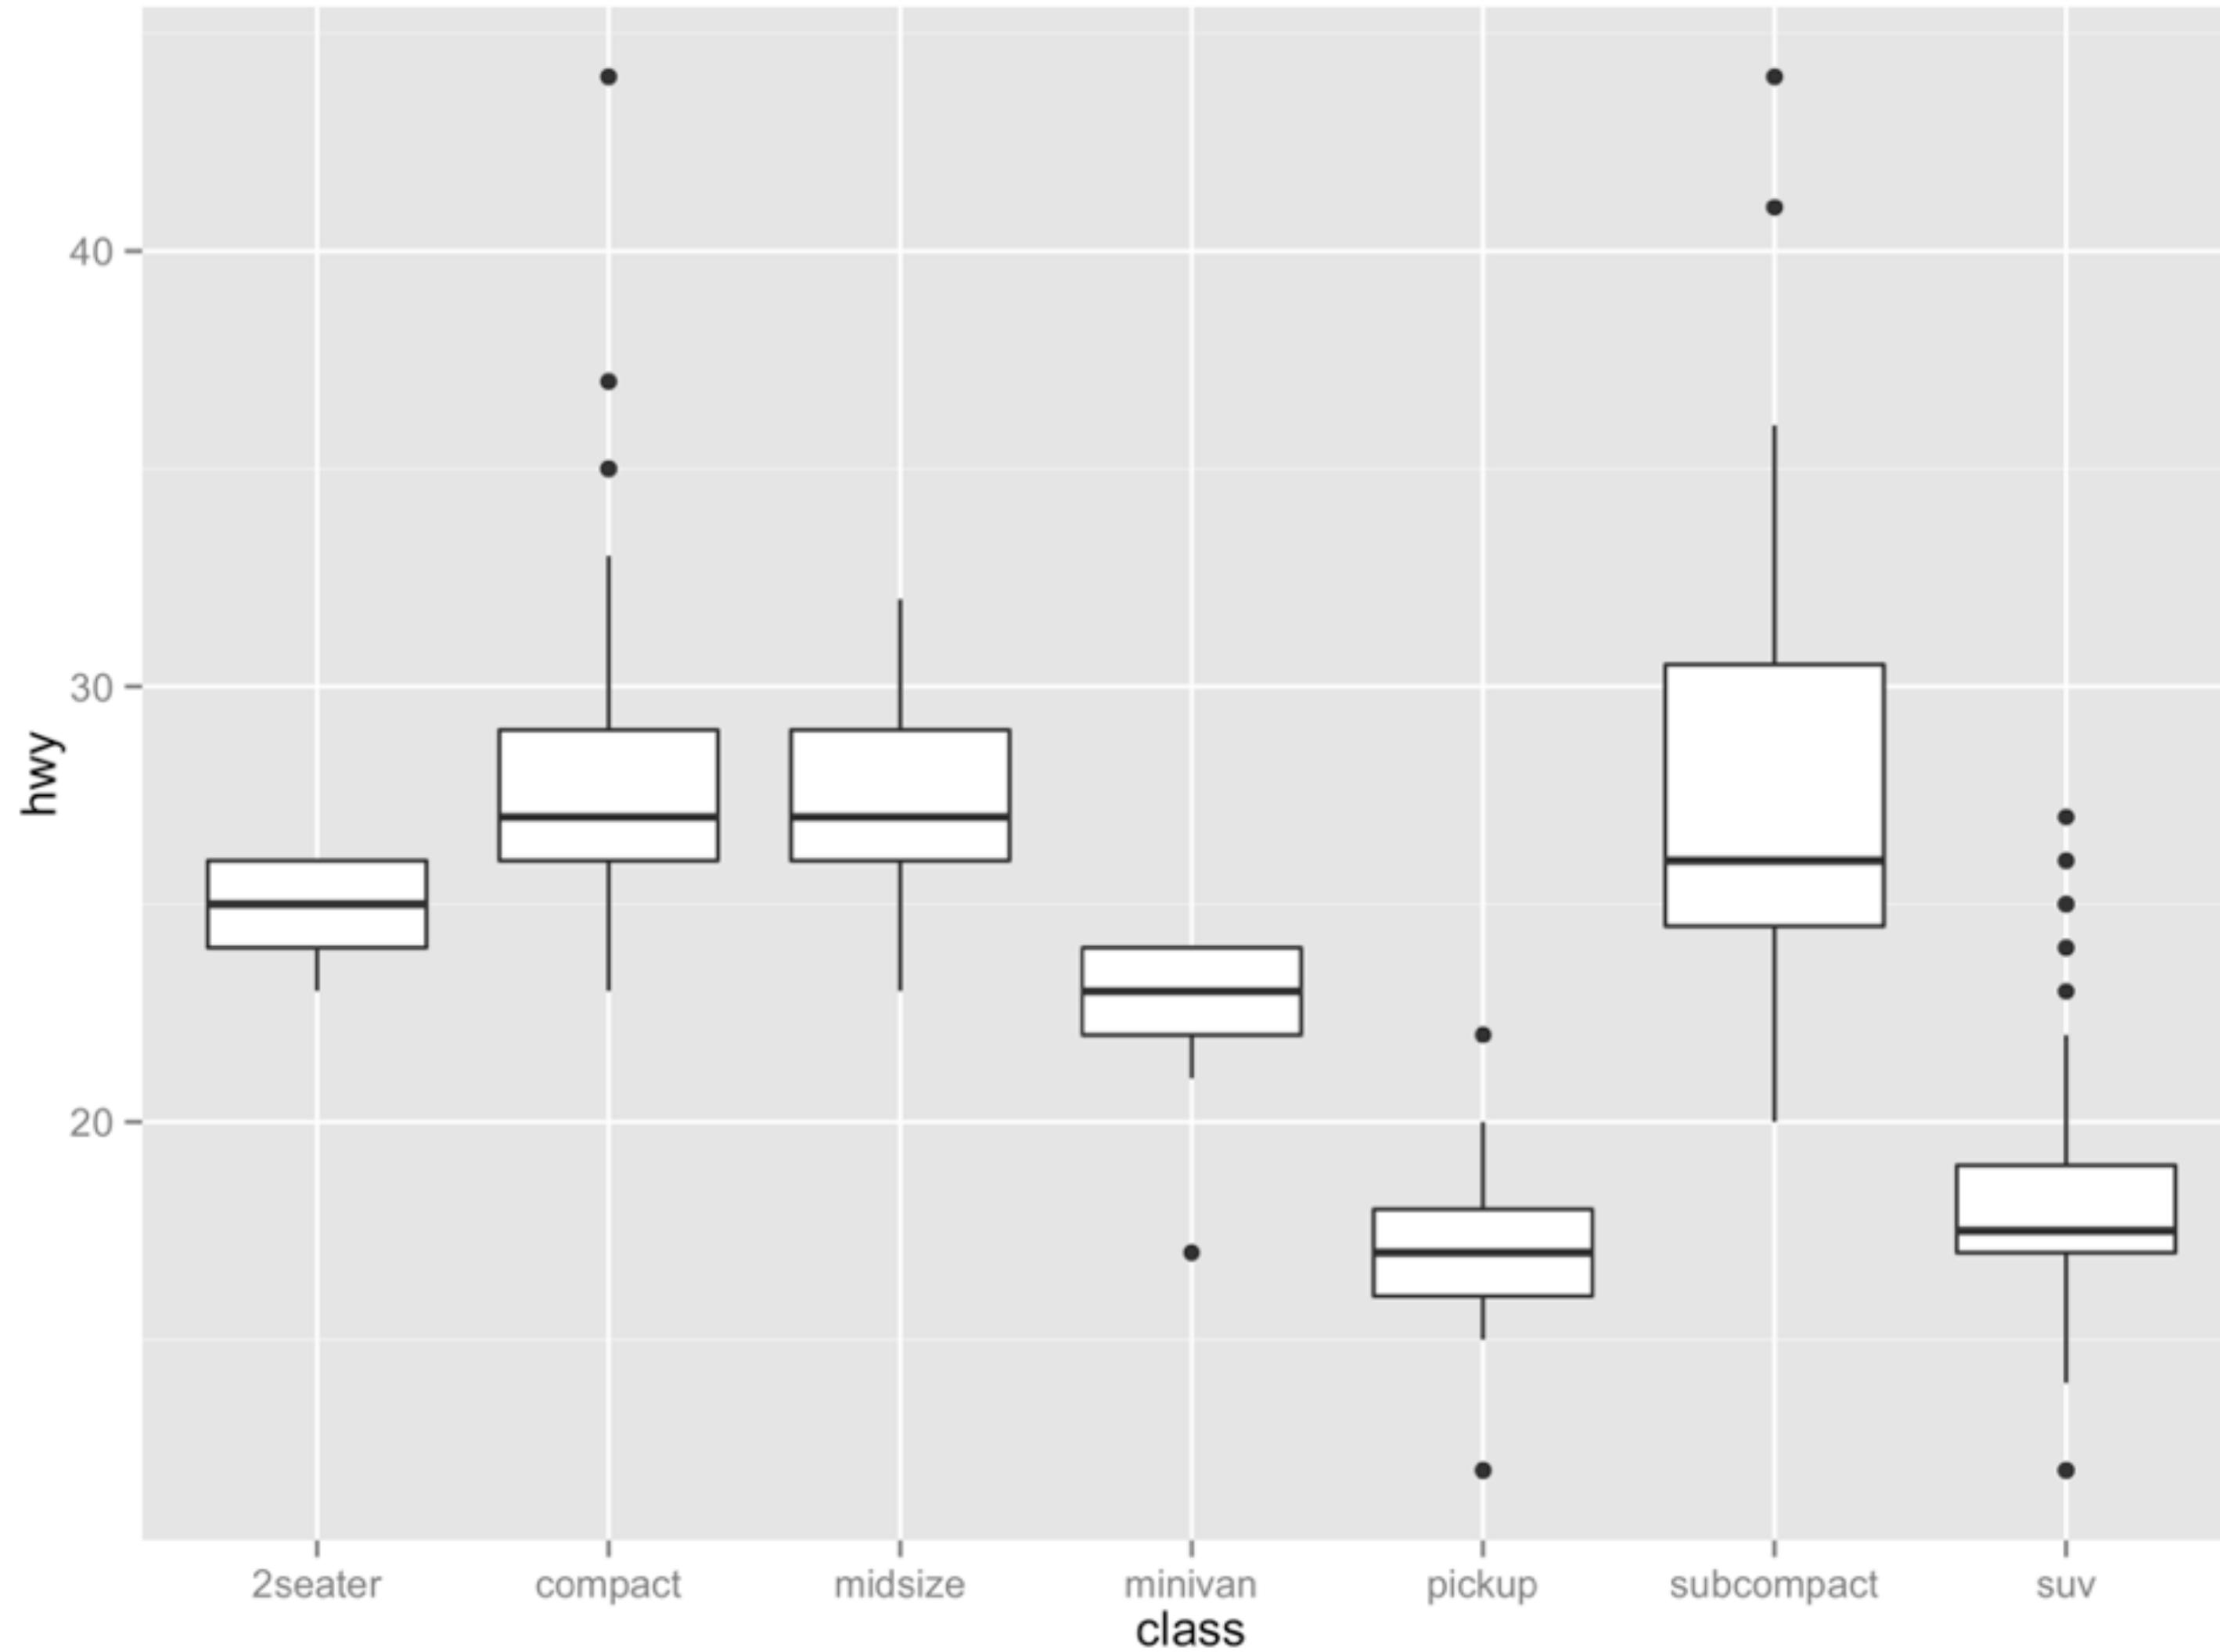

Your Turn 3

With your partner, decide how to replace this scatterplot with one that draws boxplots? Use the cheatsheet. Try your best guess.

```
ggplot(mpg) + geom_point(aes(class, hwy))
```

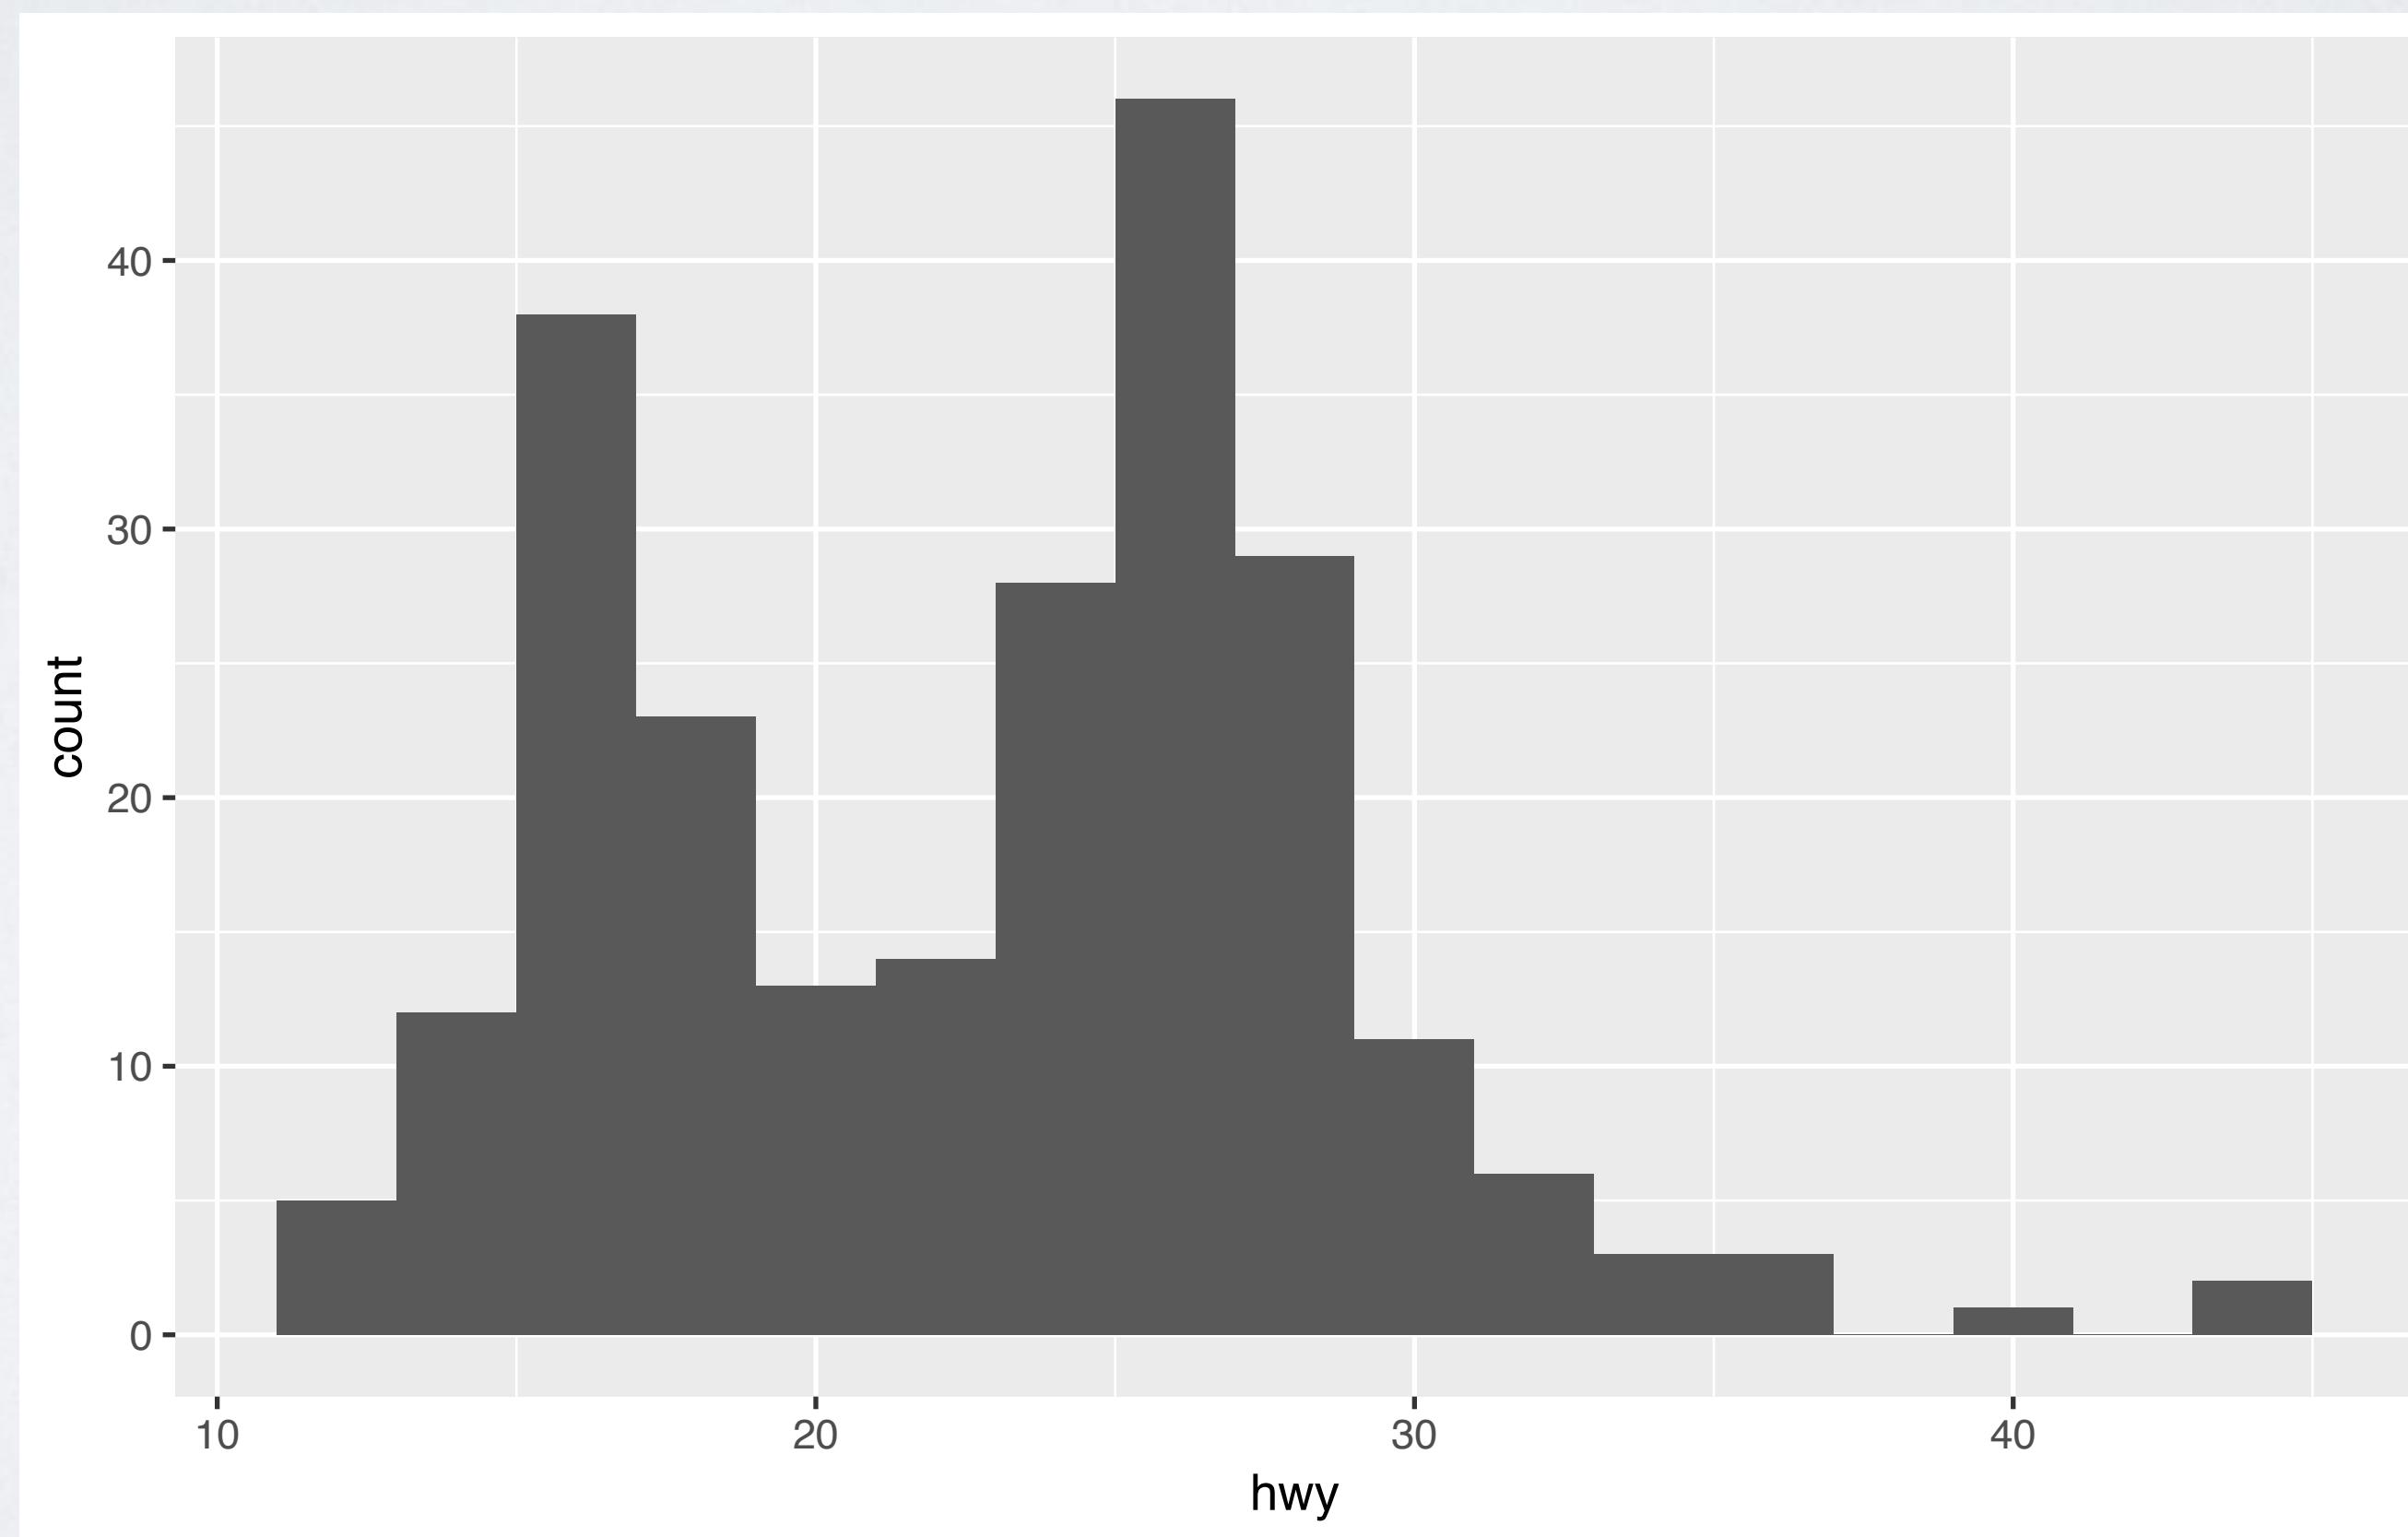

02 : 00

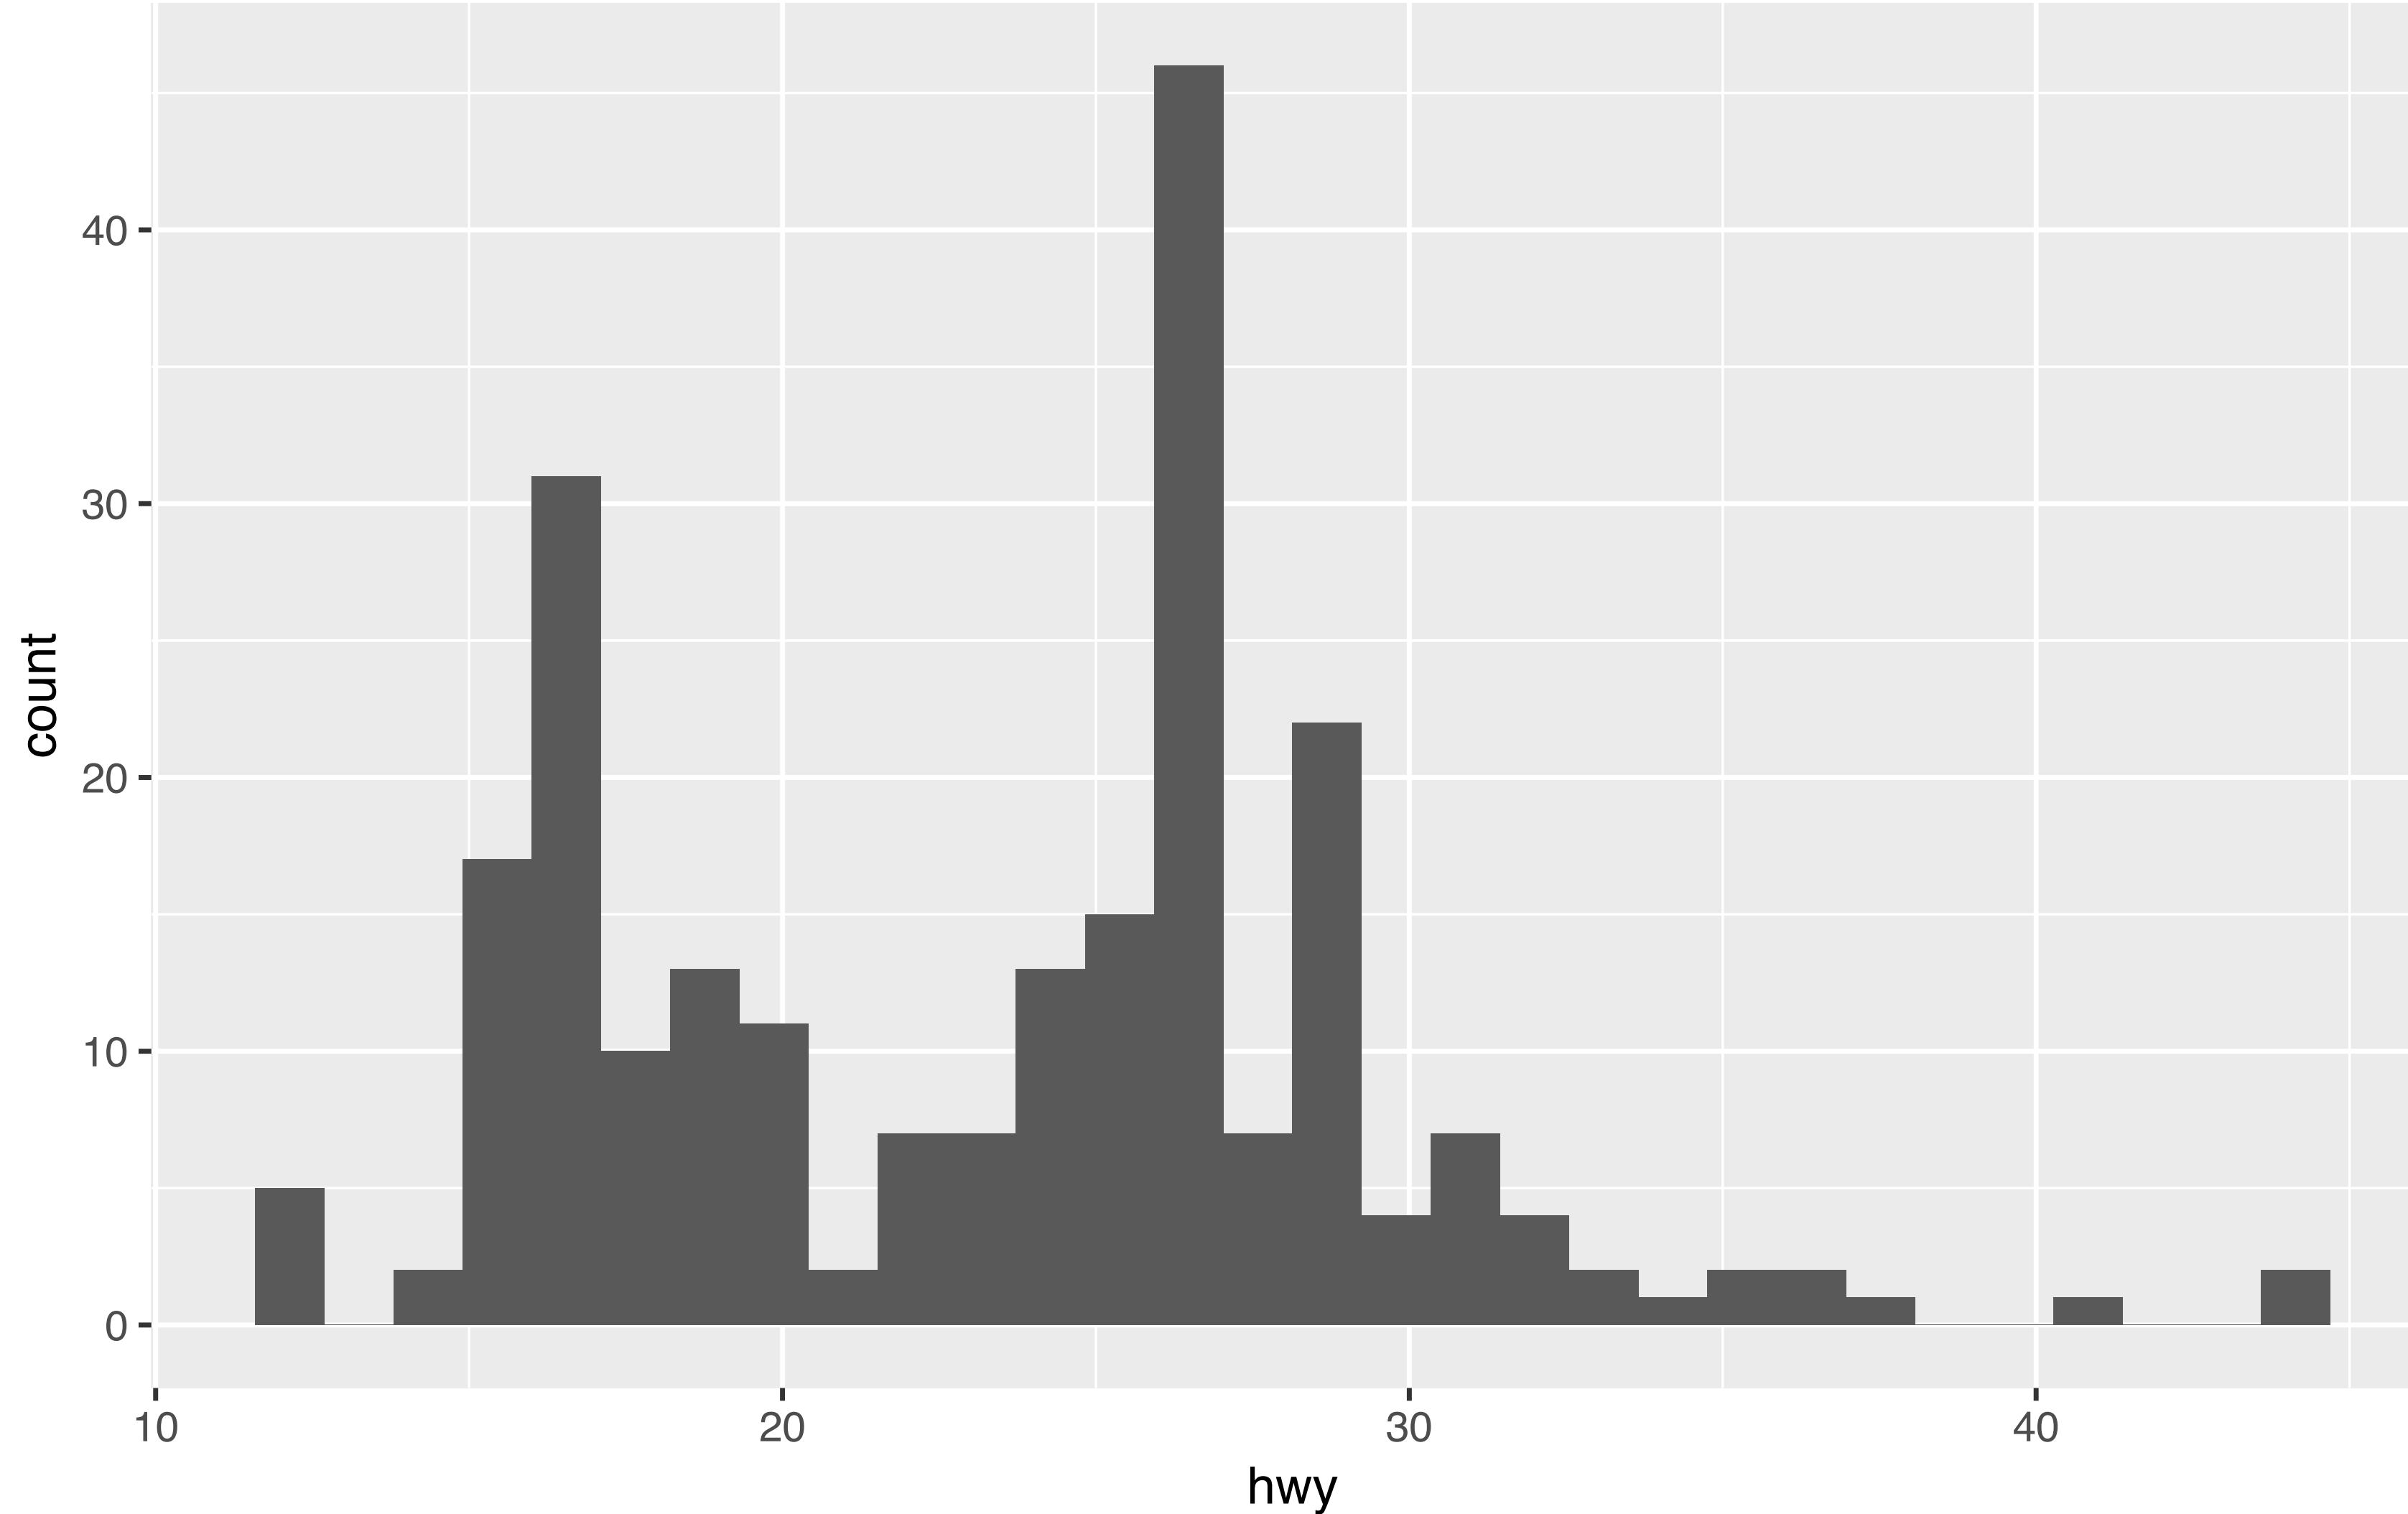

```
ggplot(data = mpg) +  
  geom_boxplot(mapping = aes(x = class, y = hwy))
```

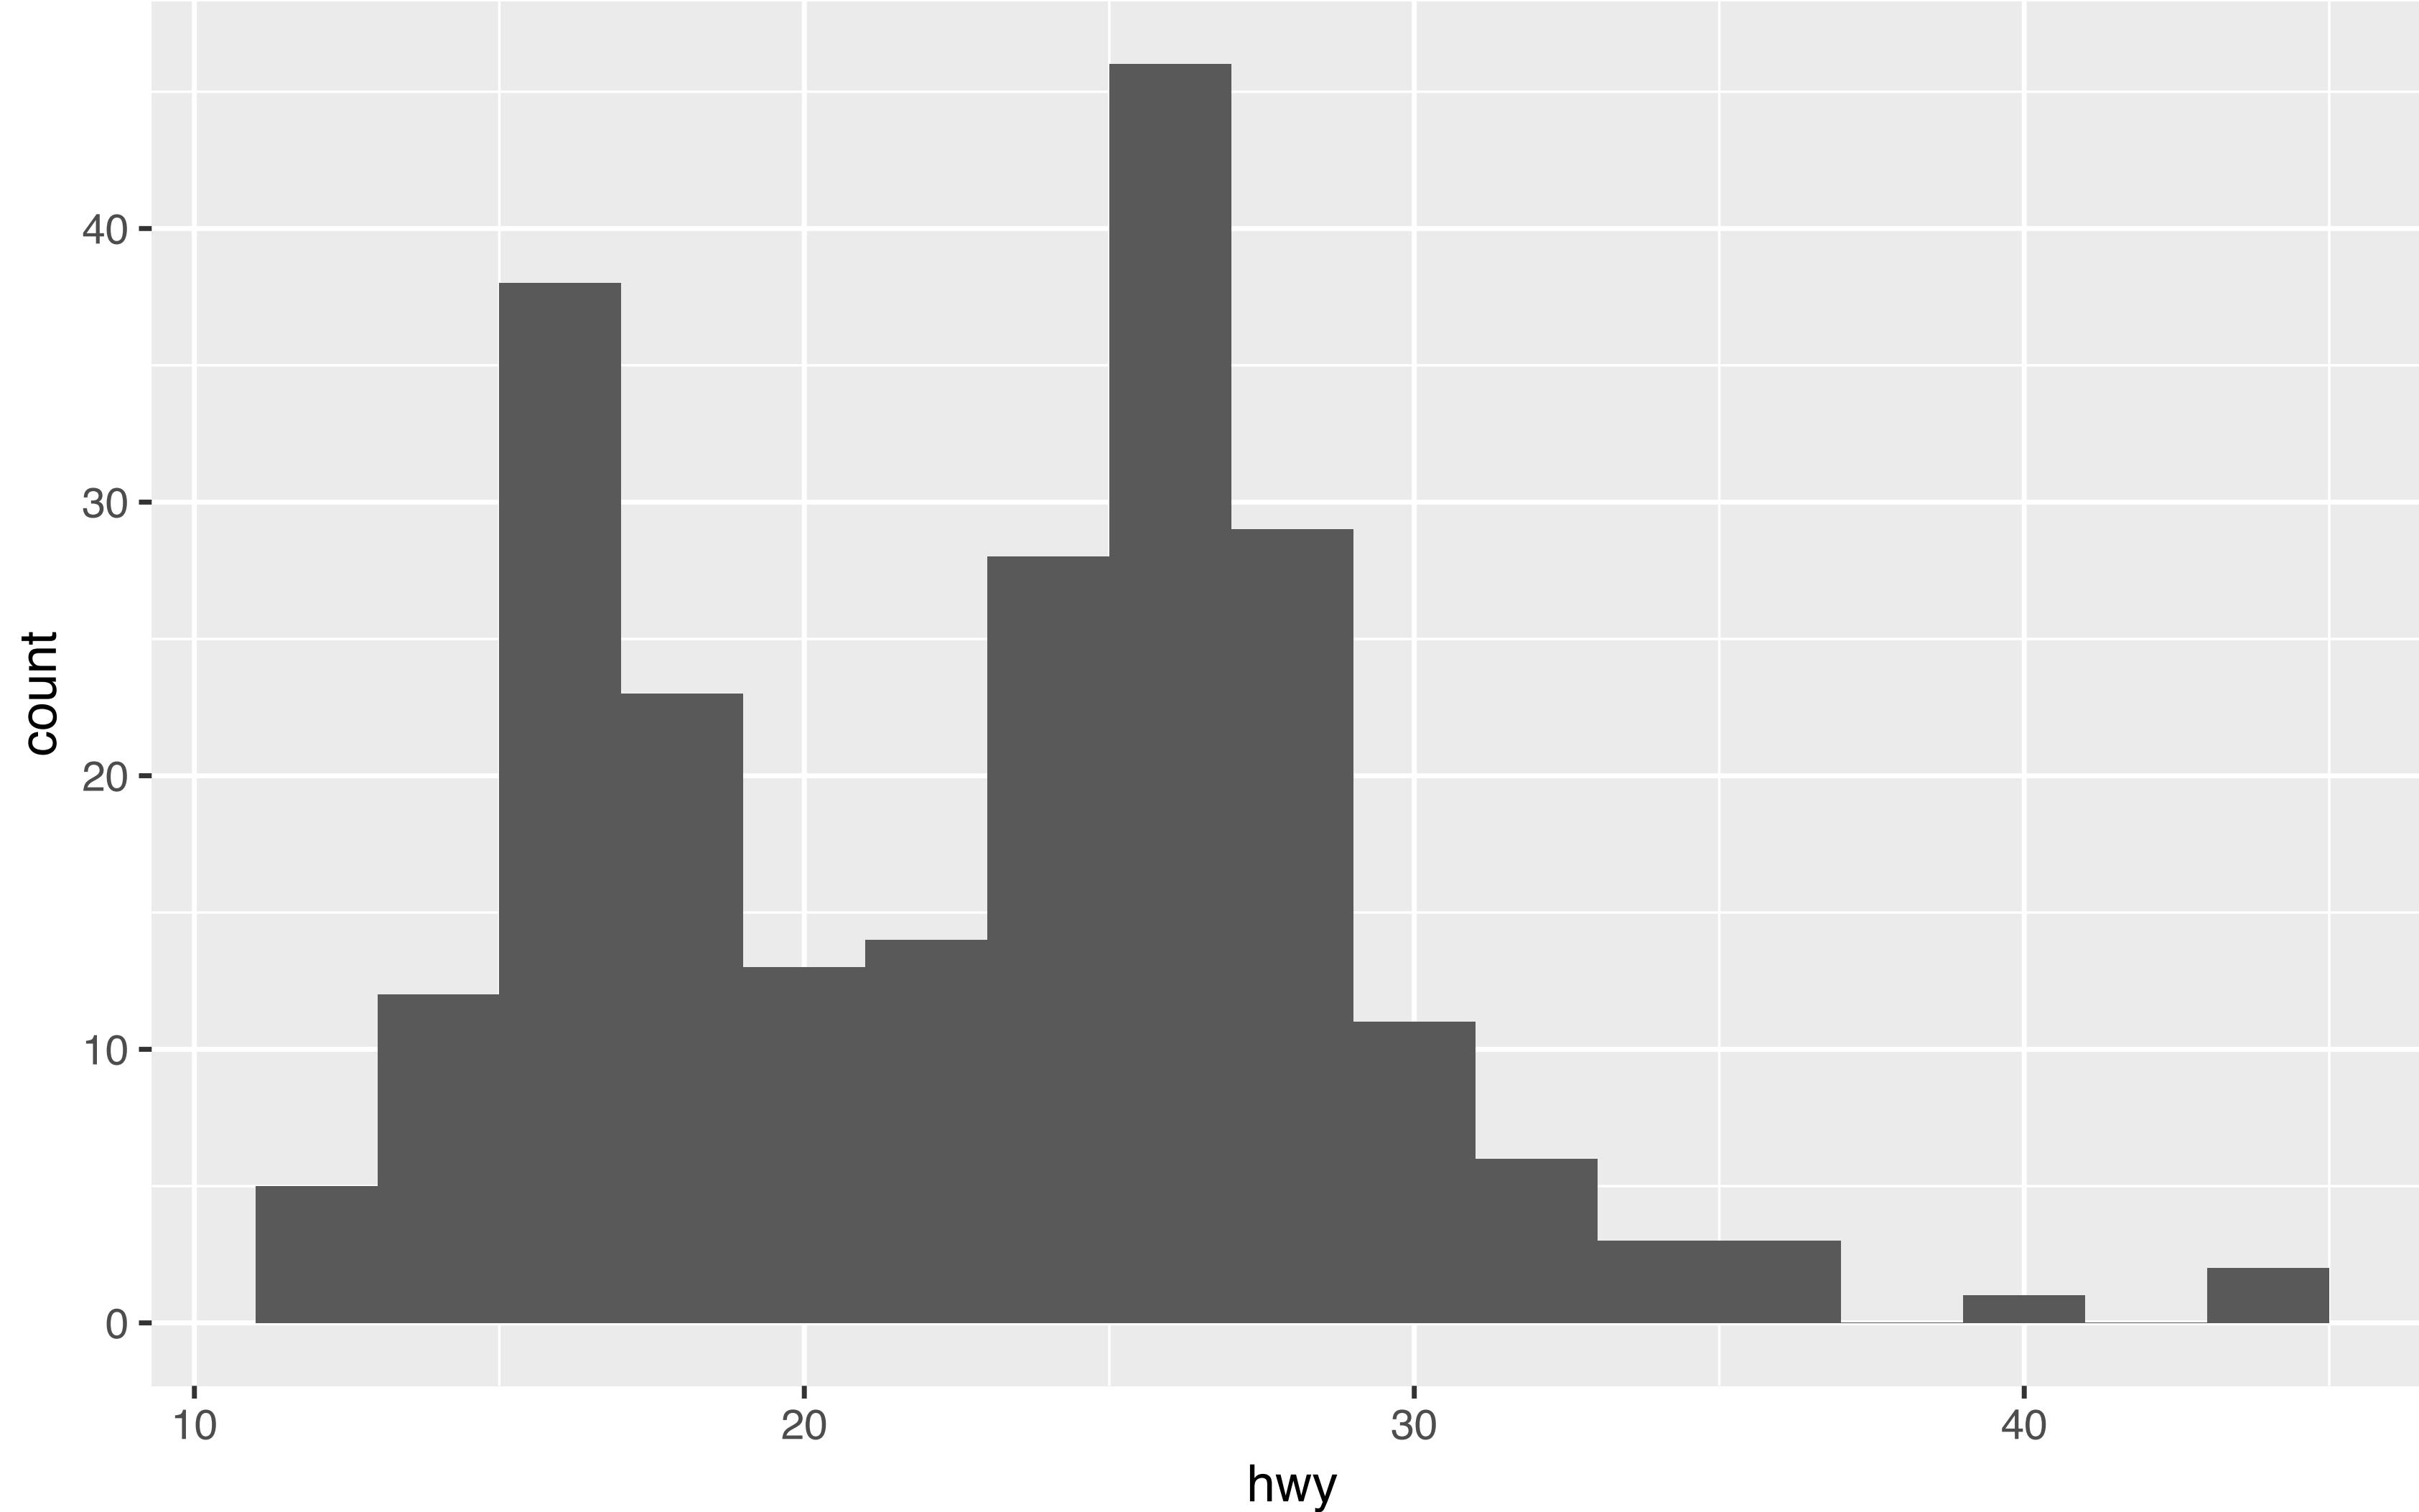

Your Turn 4

With your partner, make the histogram of `hwy` below. Use the cheatsheet. Hint: do not supply a `y` variable.

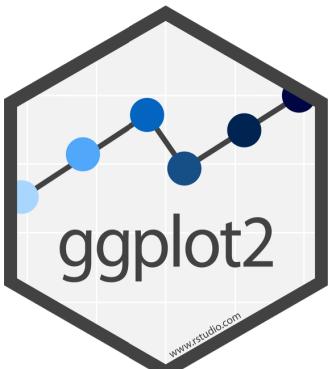

```
ggplot(data = mpg) +  
  geom_histogram(mapping = aes(x = hwy))
```

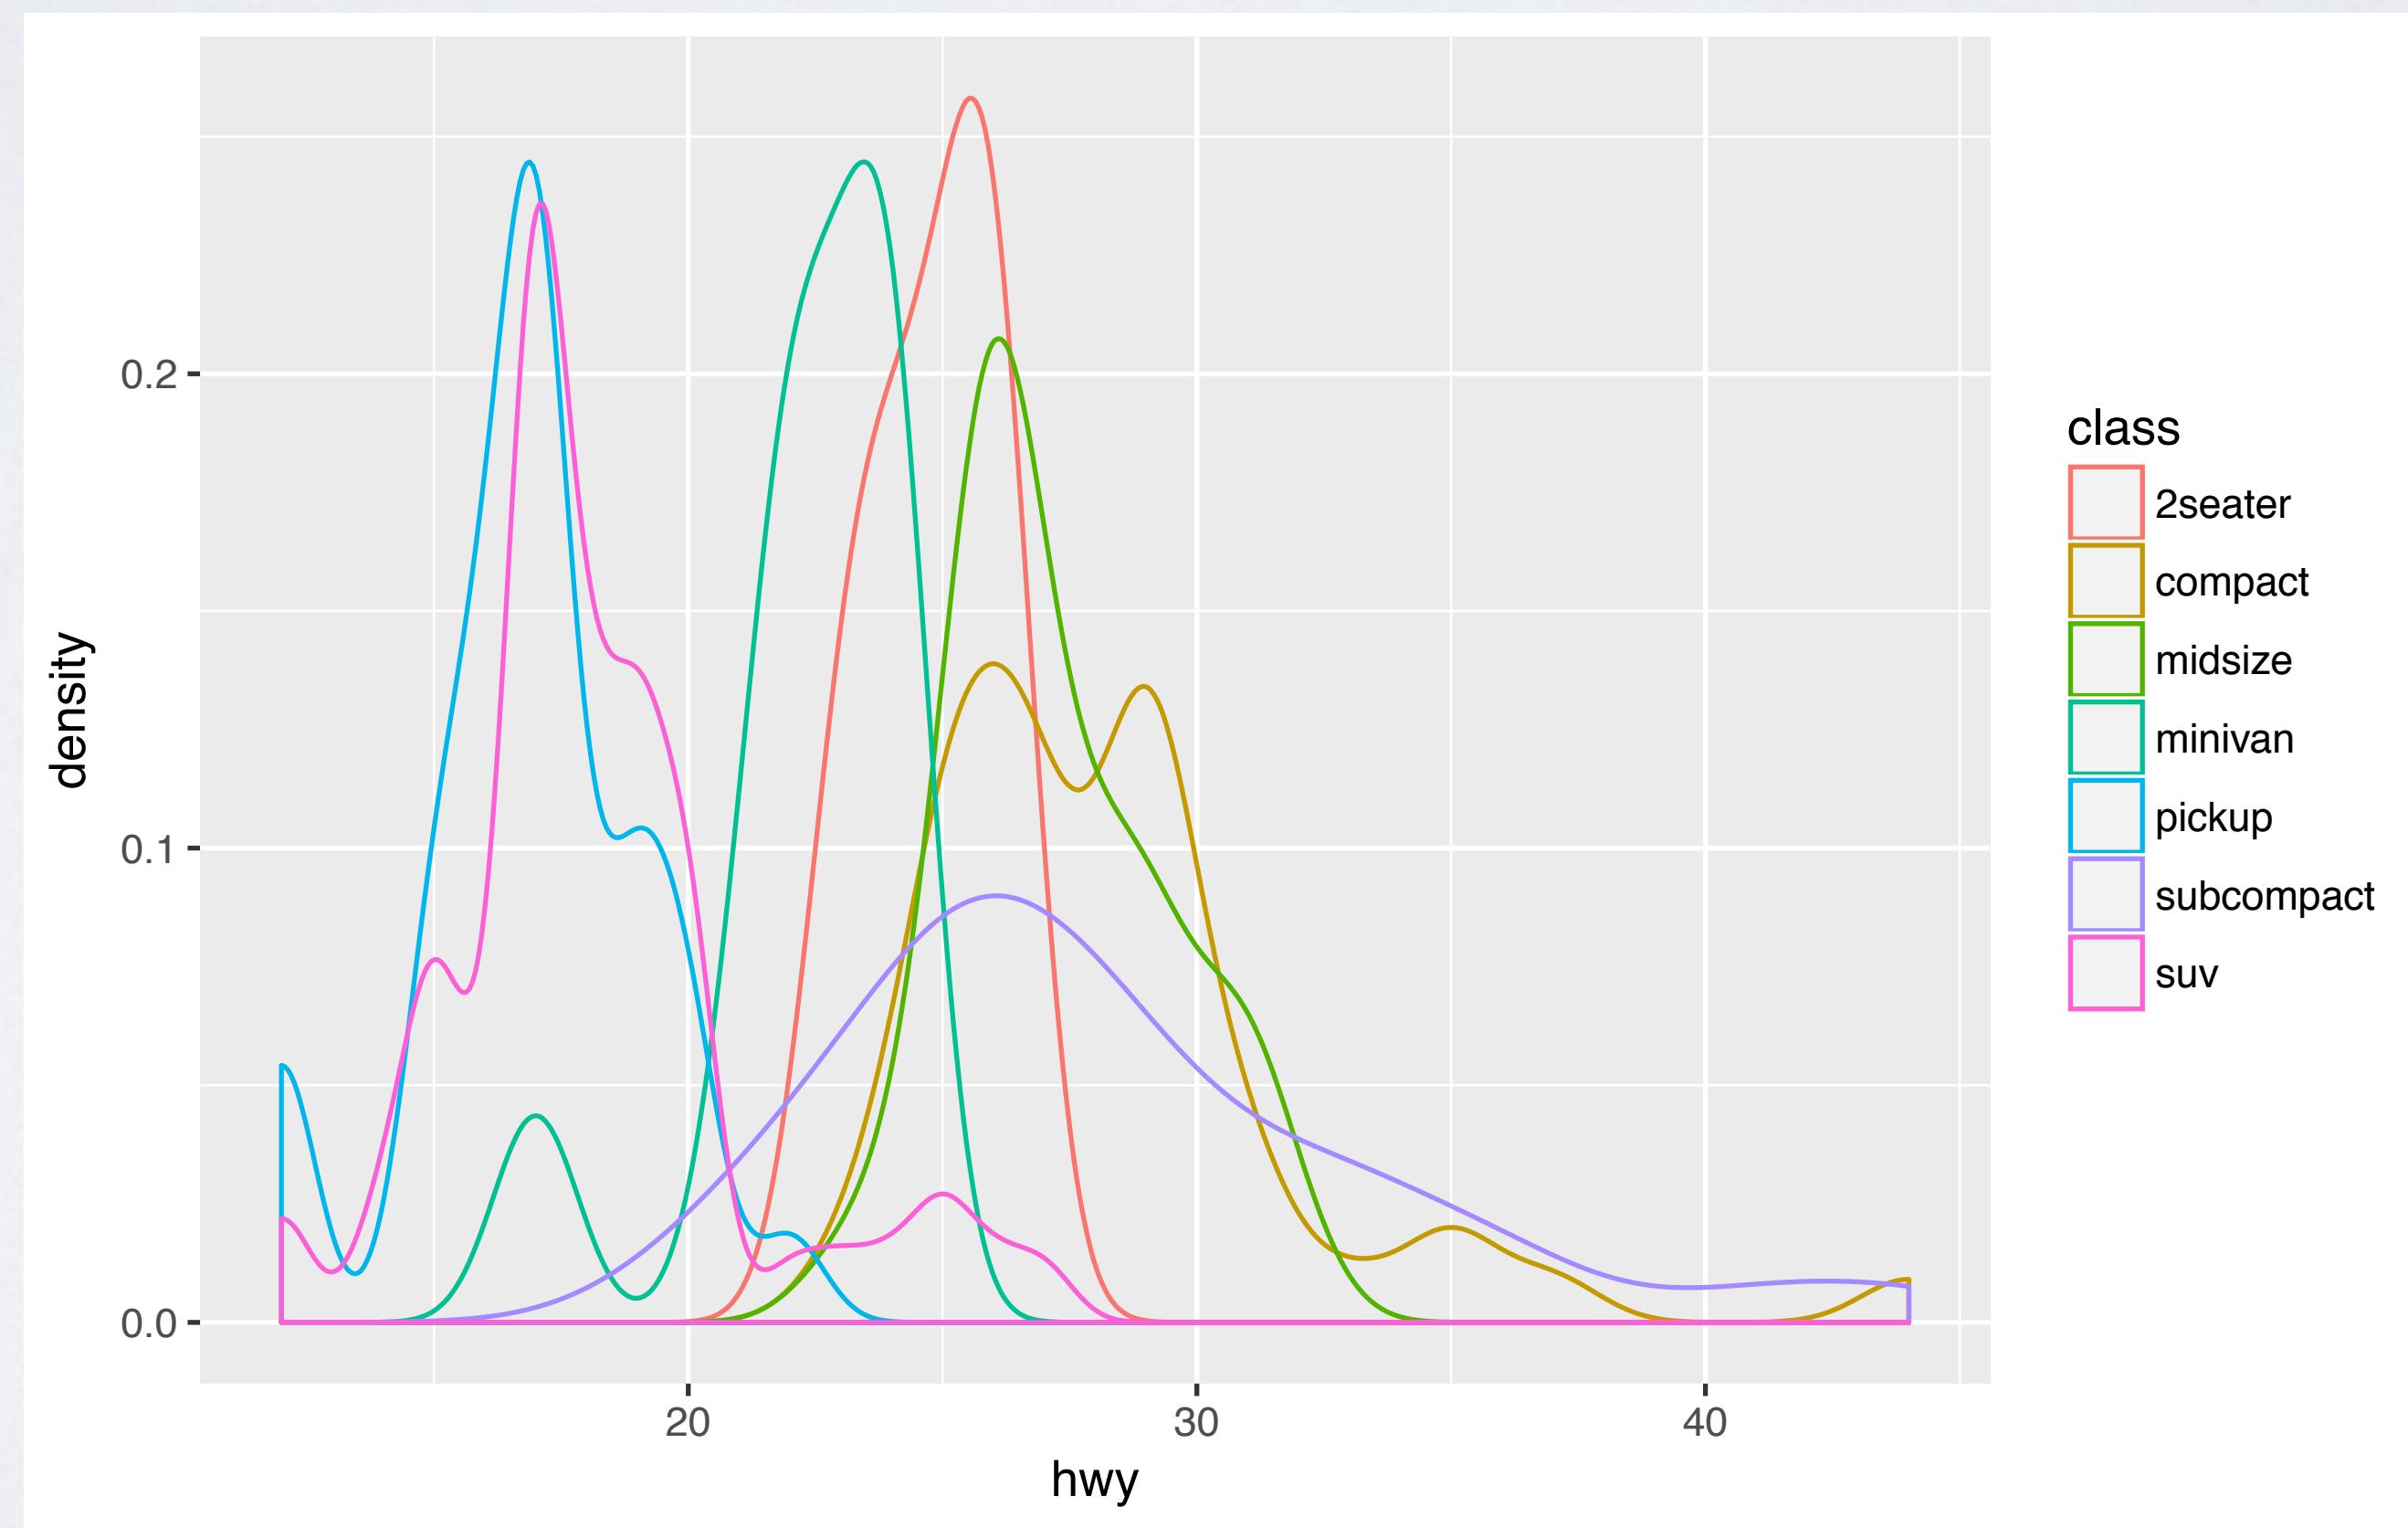

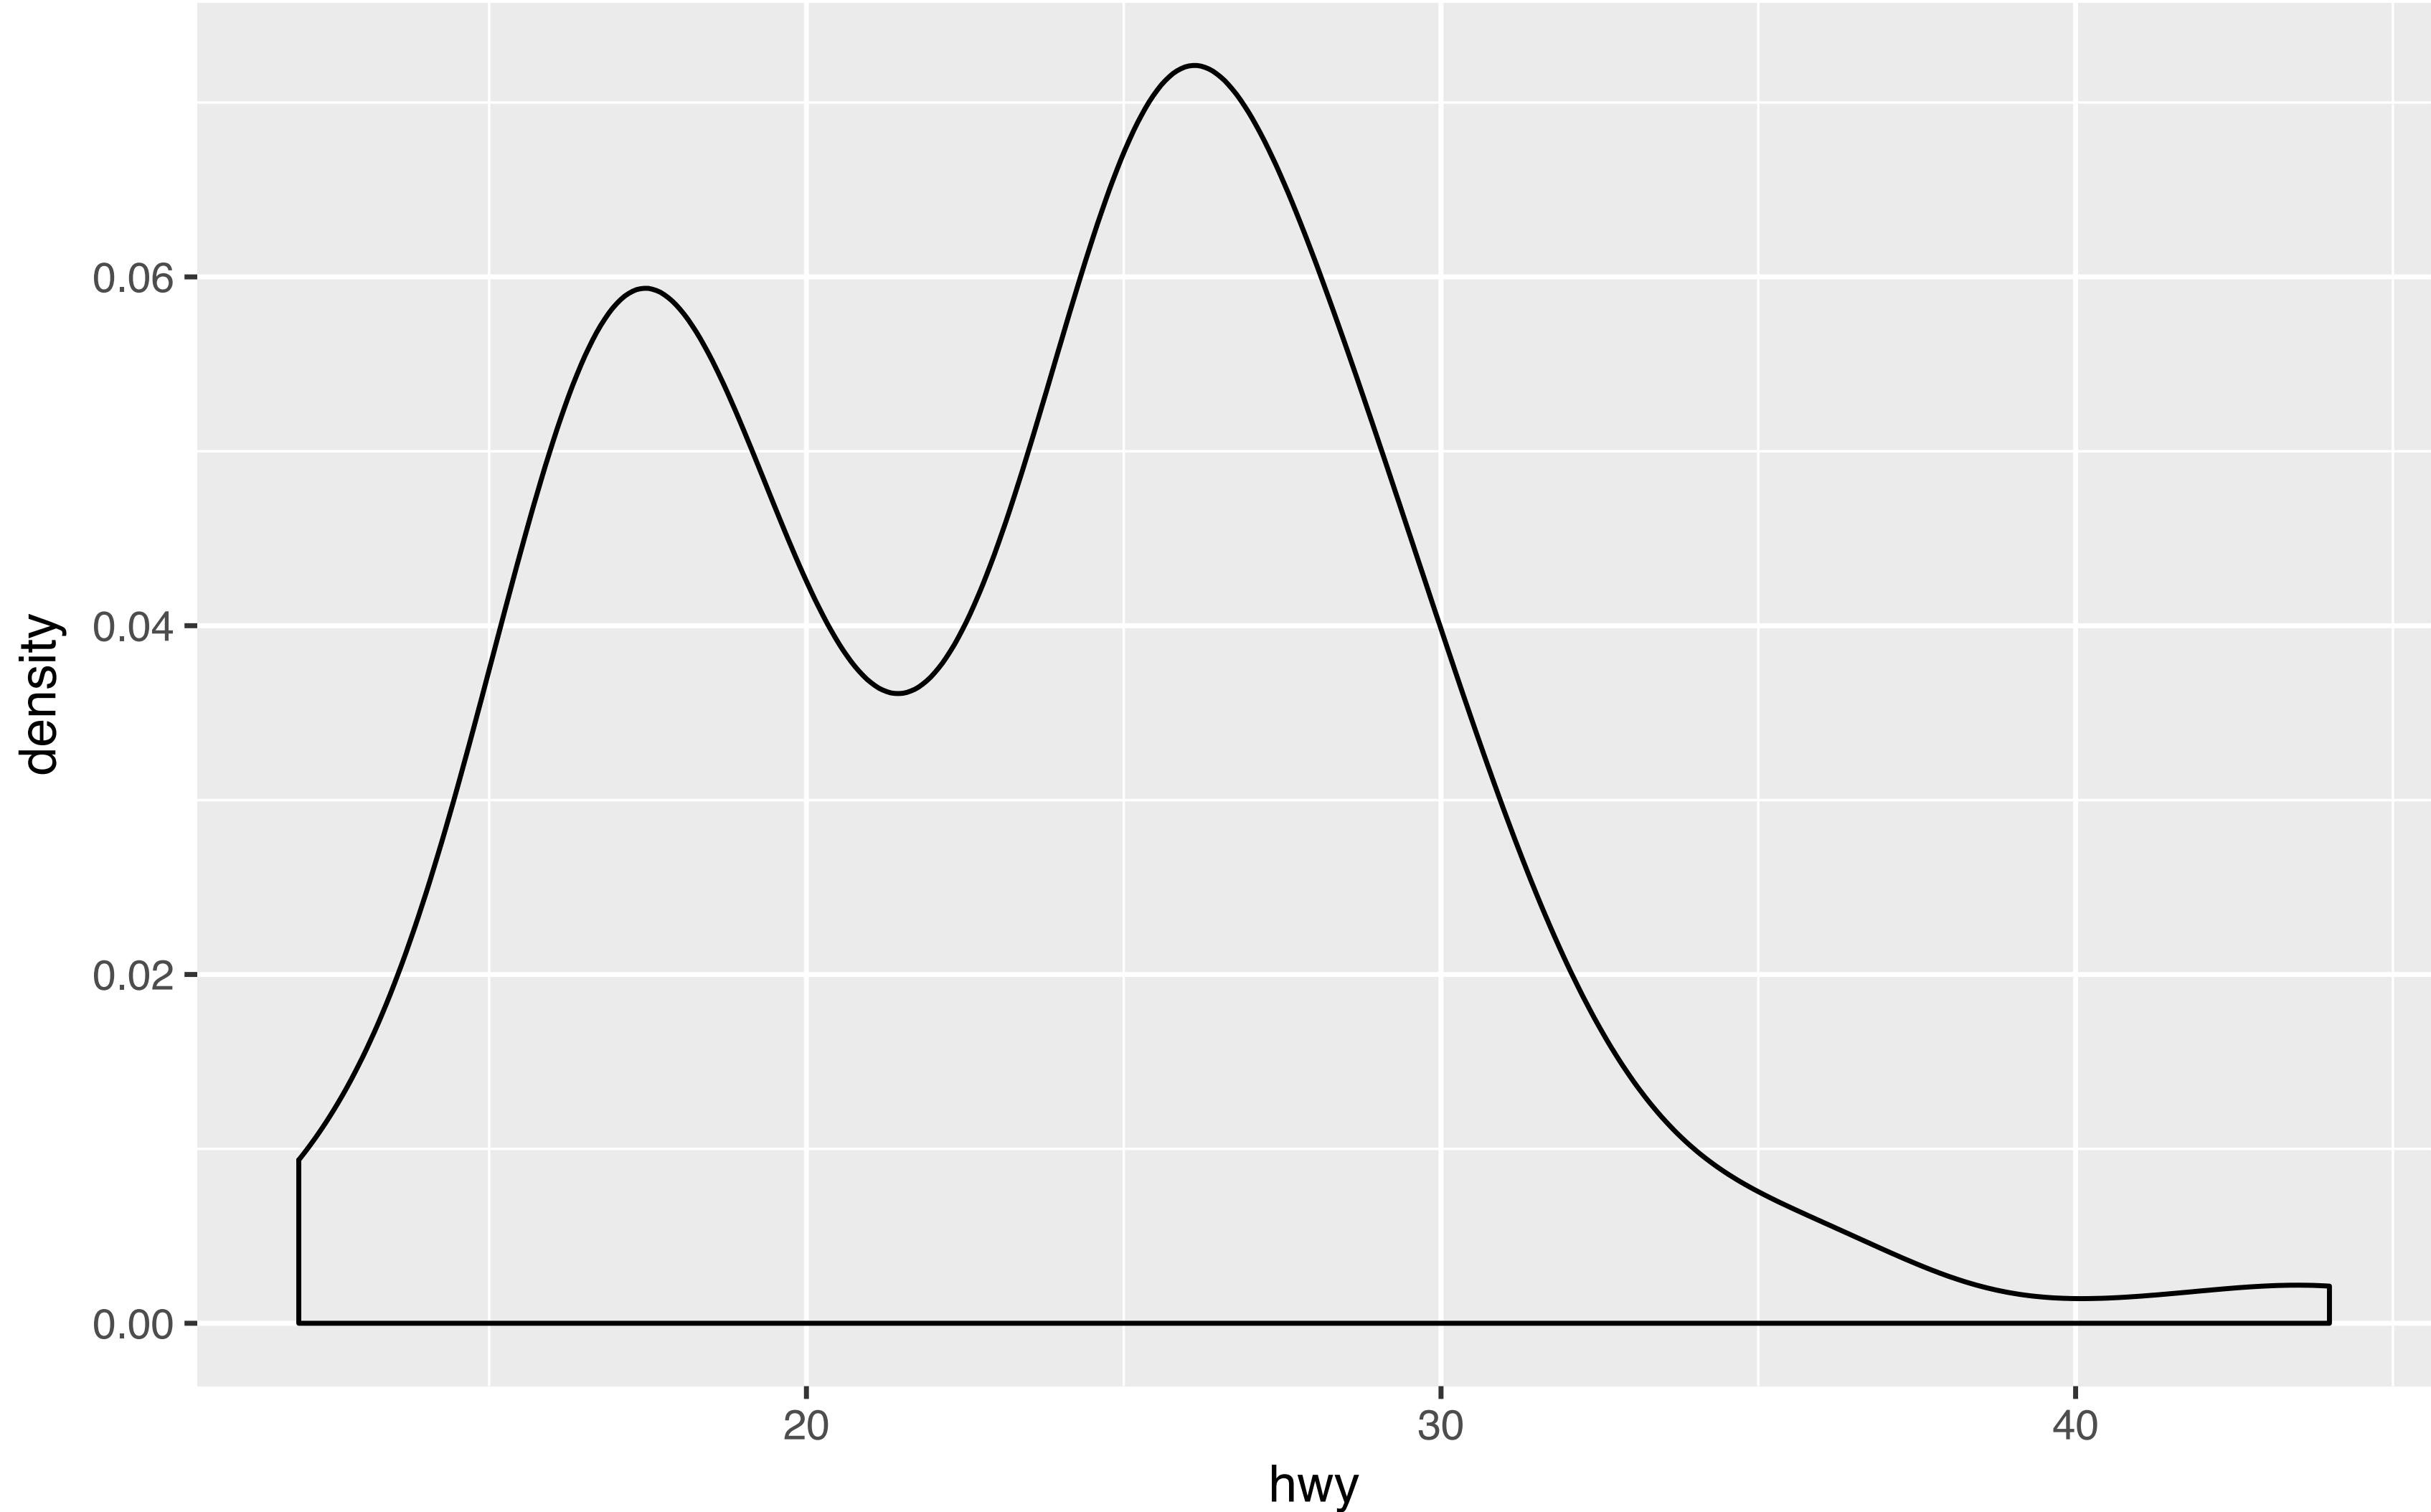

```
ggplot(data = mpg) +  
  geom_histogram(mapping = aes(x = hwy), binwidth = 2)
```

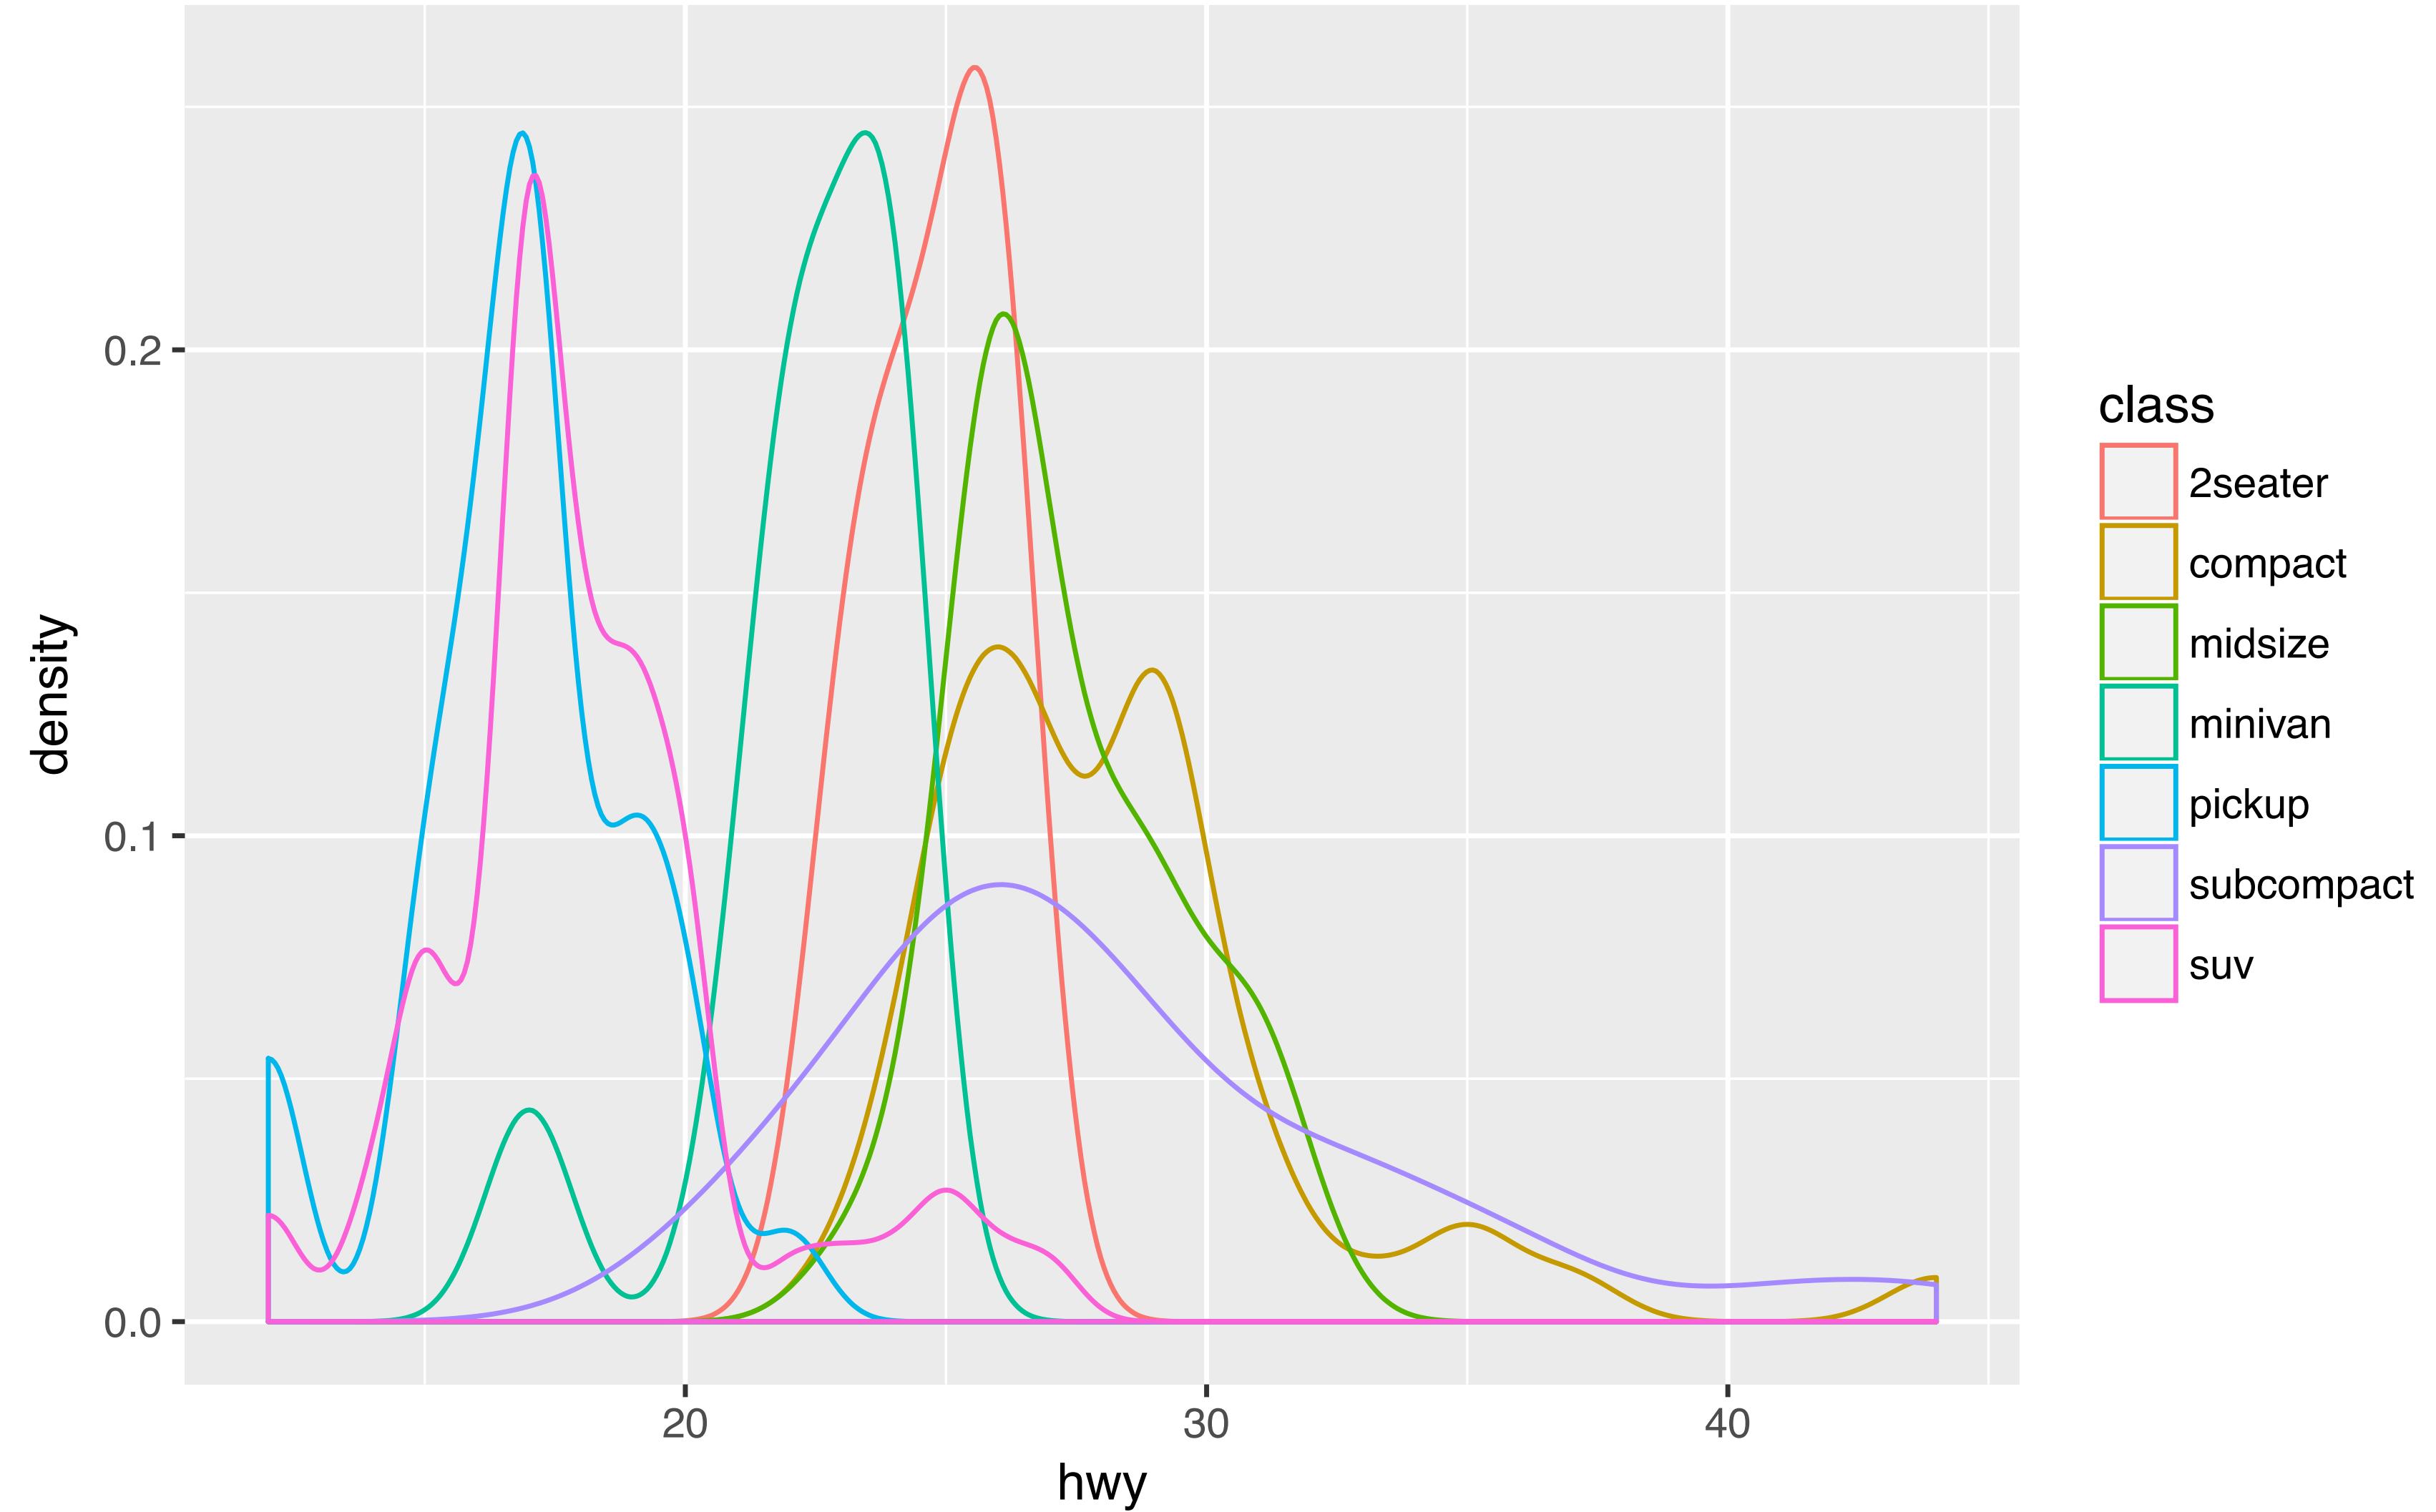

Your Turn 5

With your partner, make the density plot of **hwy** colored by **class** below. Use the cheatsheet. Try your best guess.

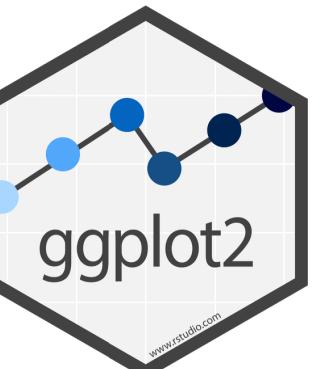

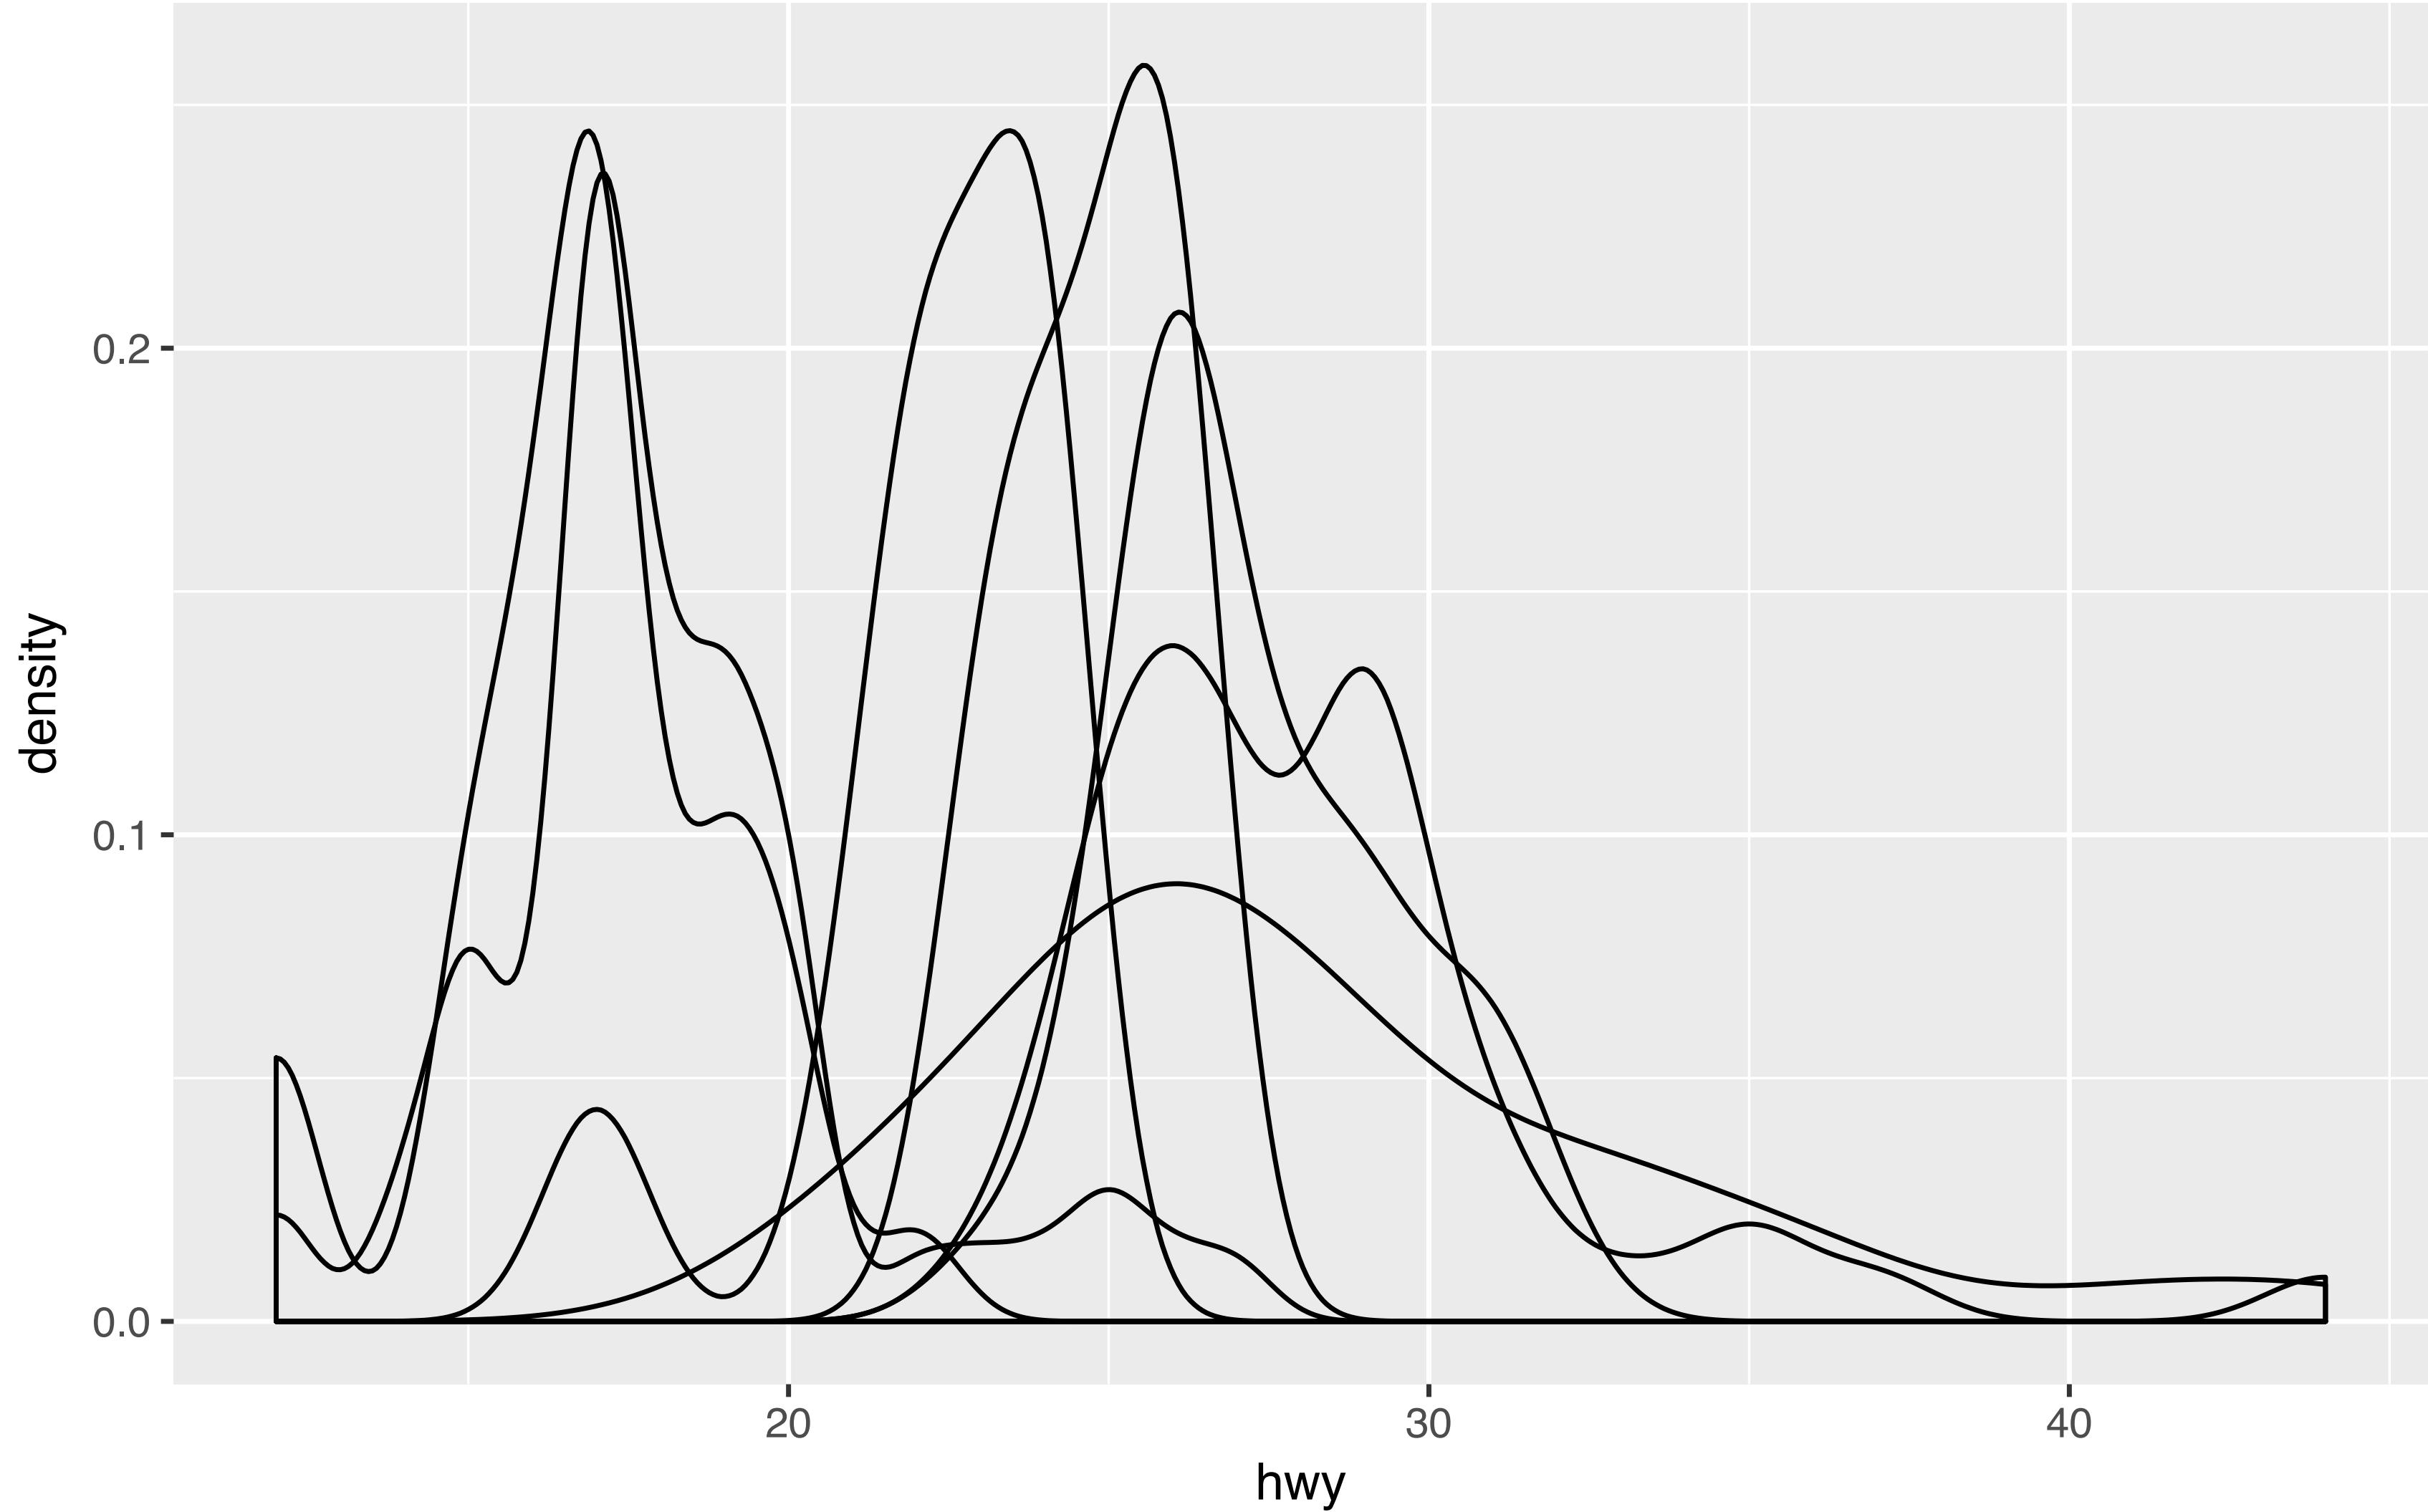

```
ggplot(data = mpg) +  
  geom_density(mapping = aes(x = hwy))
```

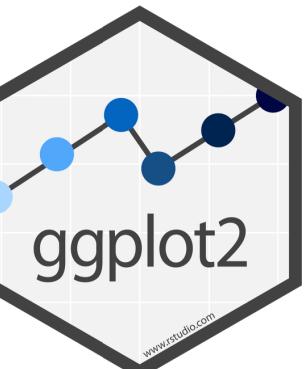

```
ggplot(data = mpg) +  
  geom_density(mapping = aes(x = hwy, color = class))
```

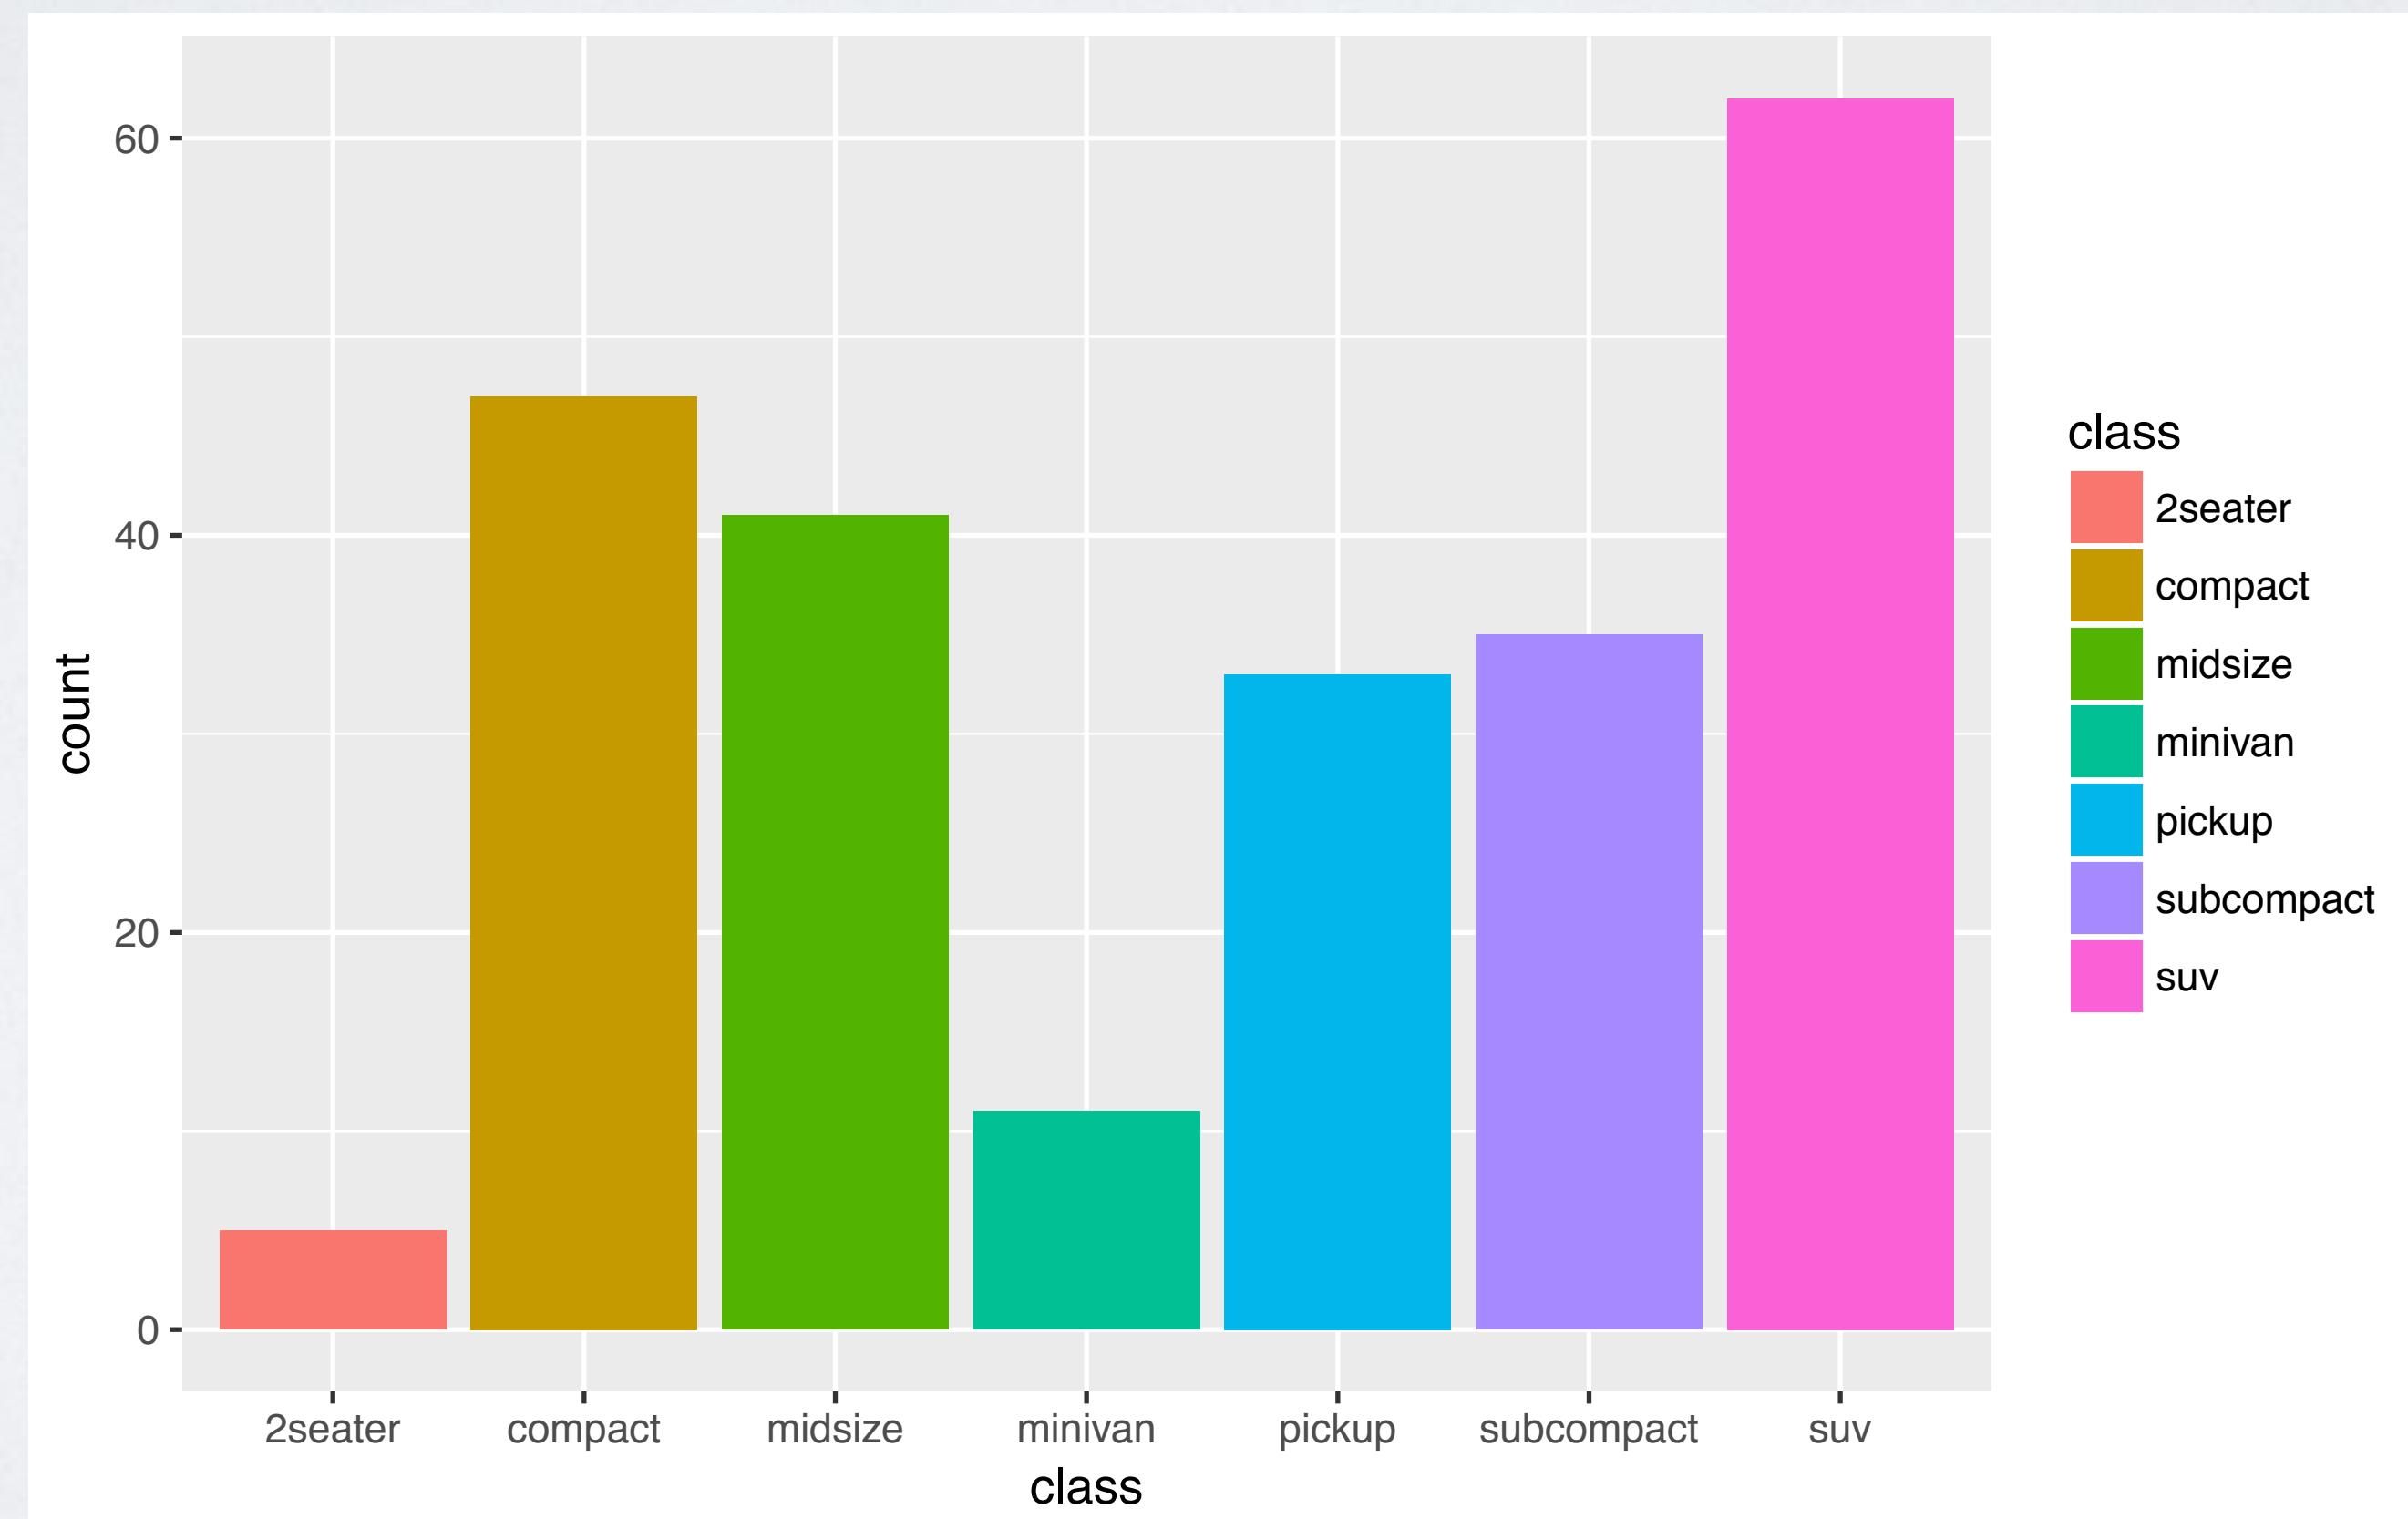

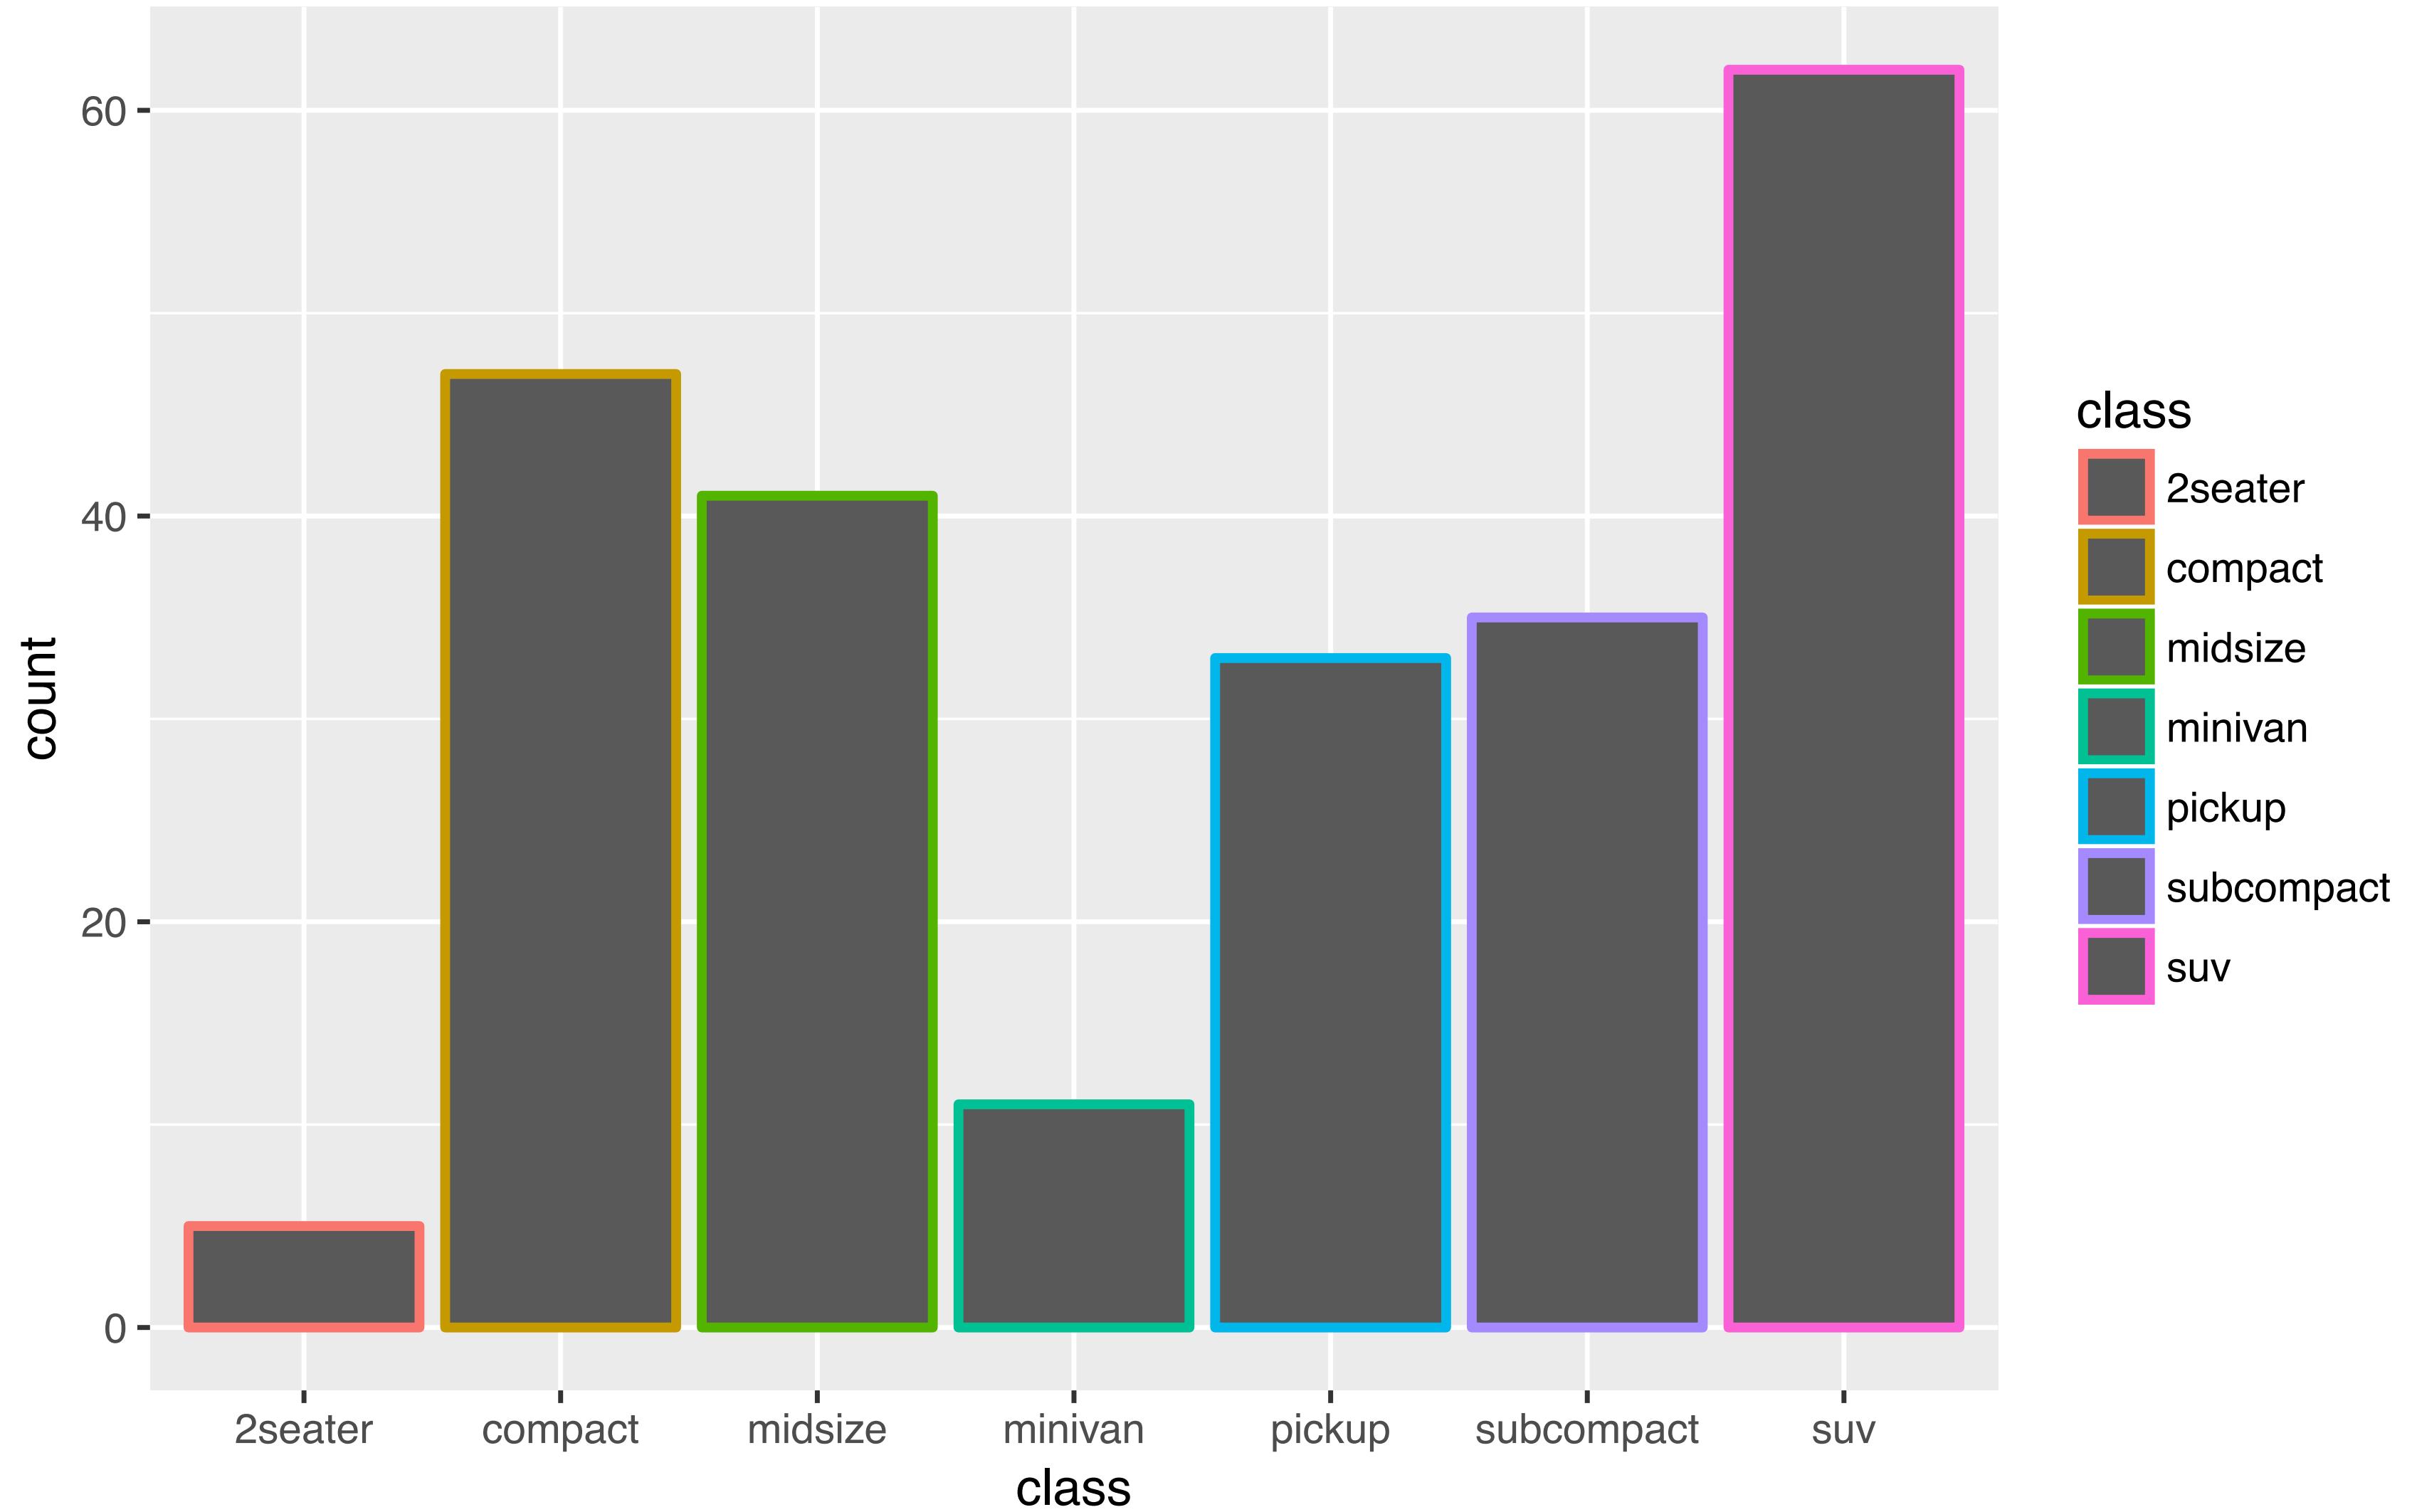

```
ggplot(data = mpg) +  
  geom_density(mapping = aes(x = hwy, group = class))
```

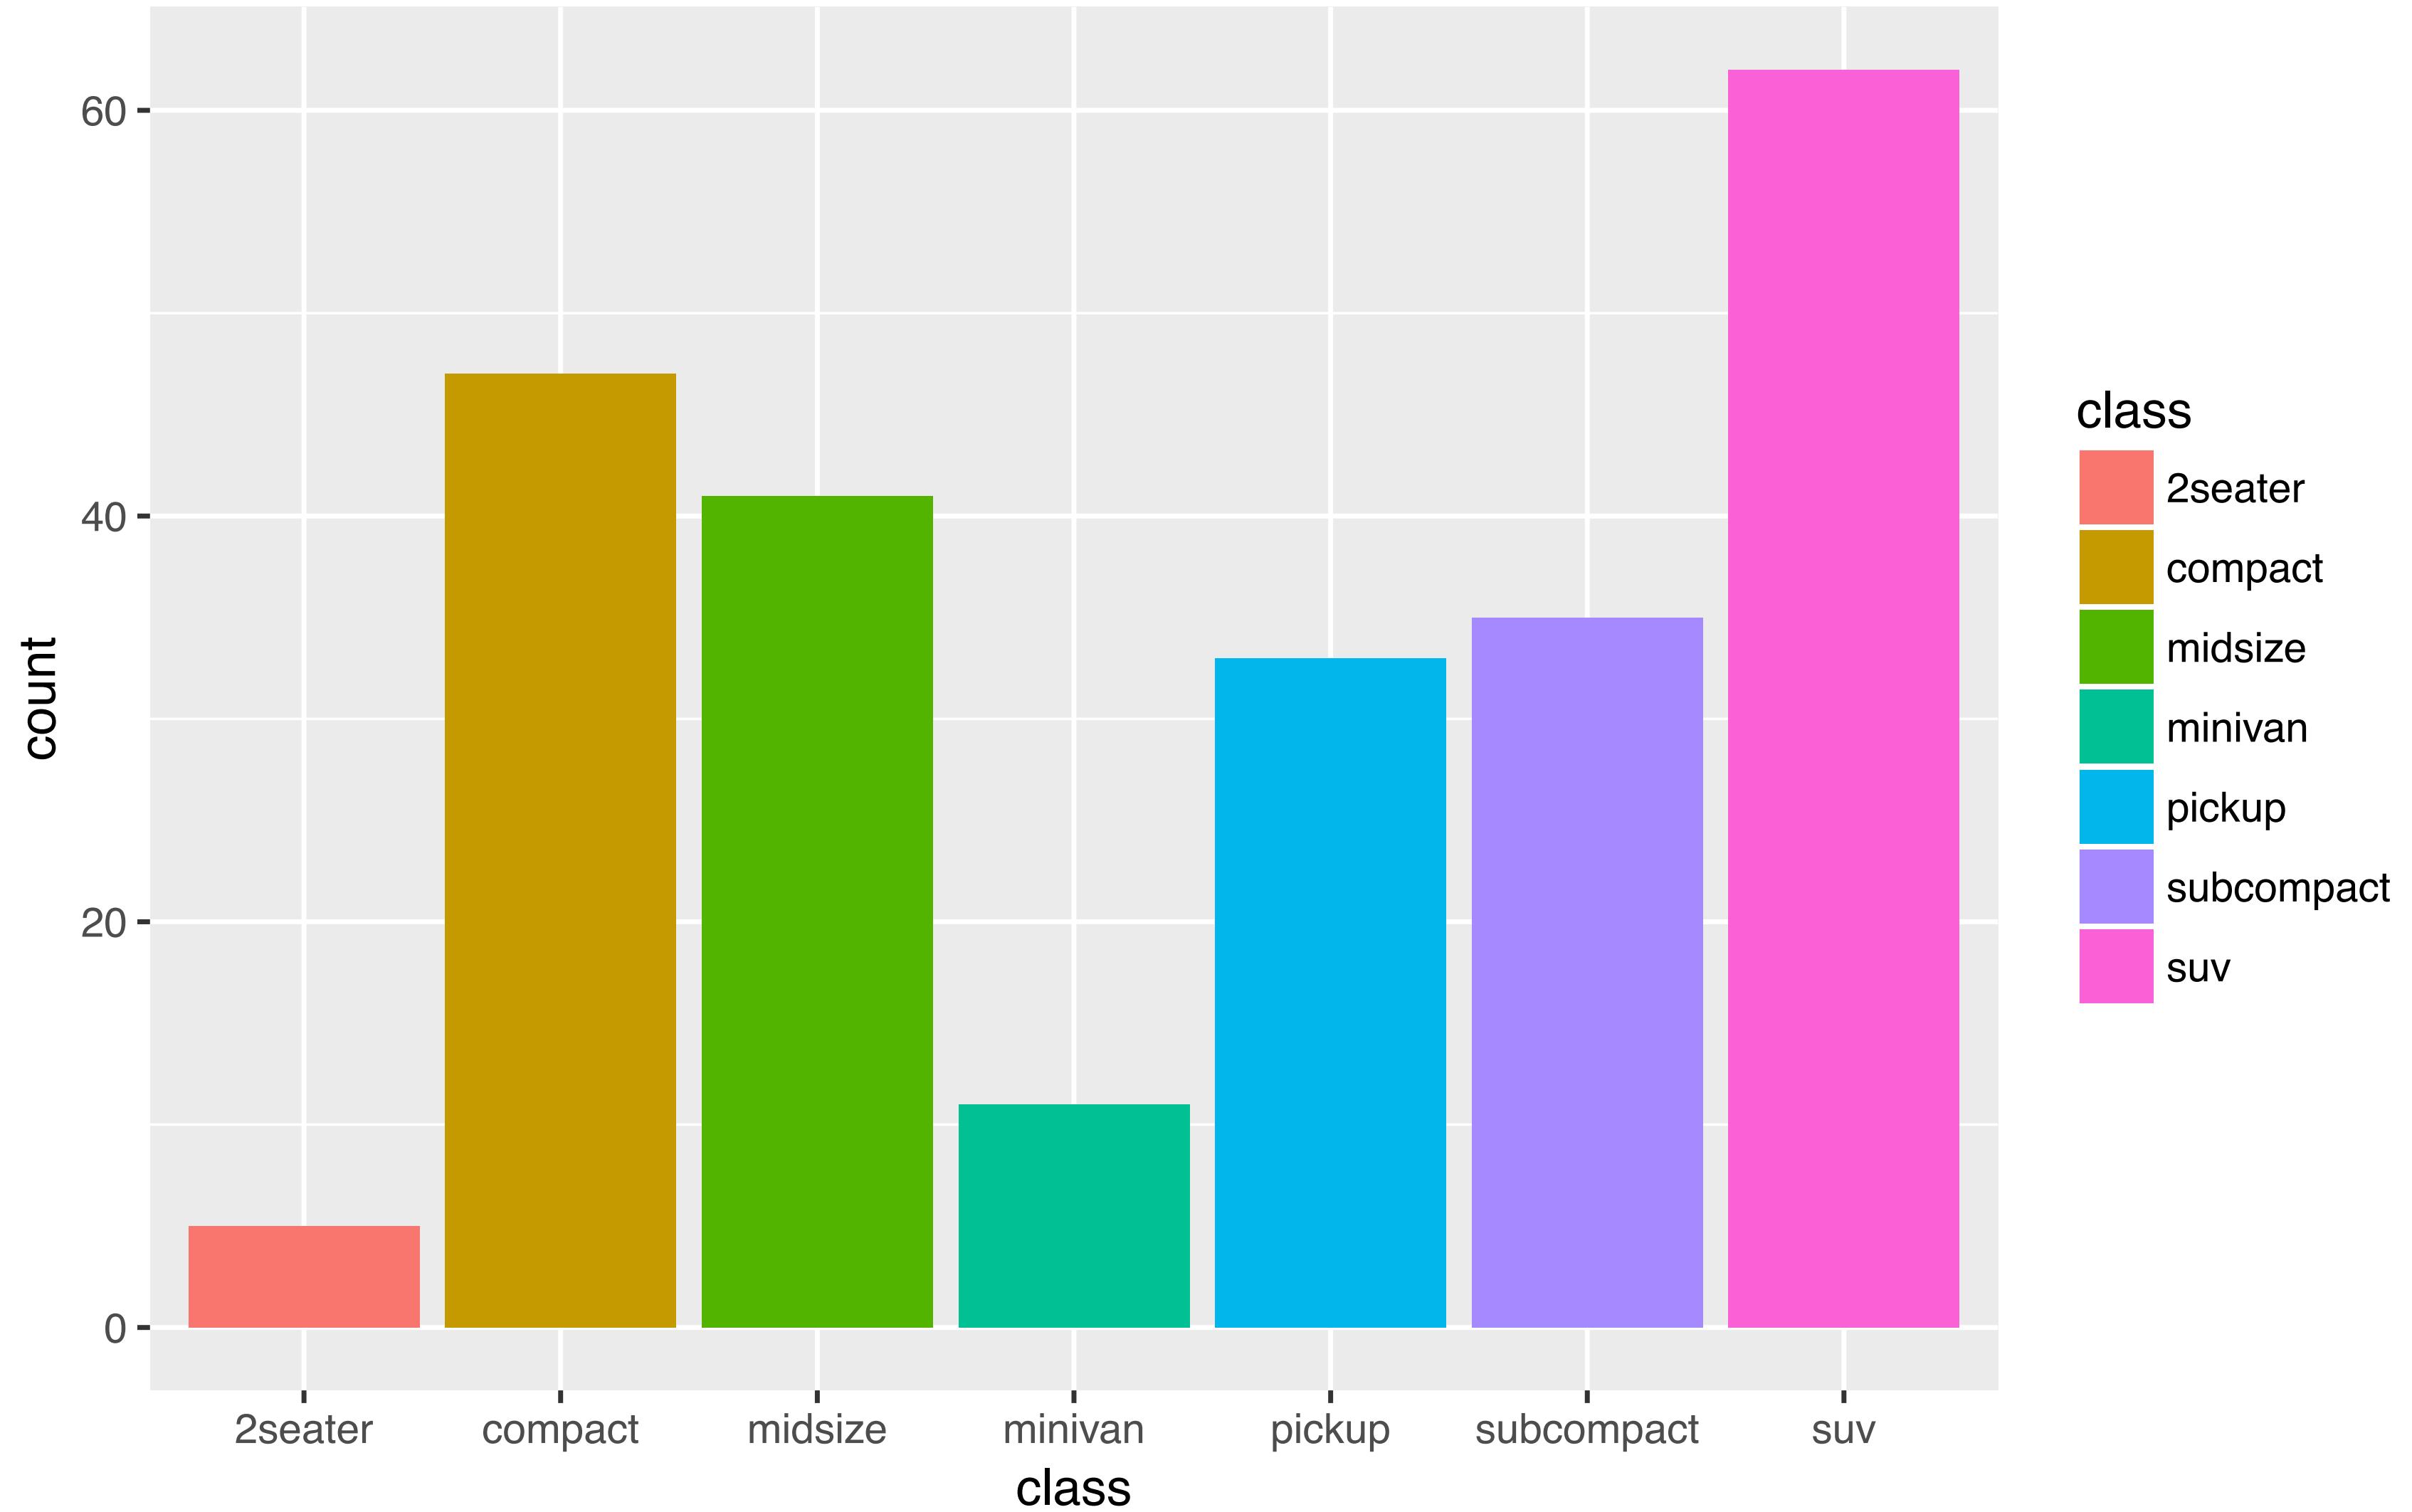

Your Turn 6

With your partner, make the bar chart of **class** colored by **class** below. Use the cheatsheet. Try your best guess.

```
ggplot(data = mpg) +  
  geom_bar(mapping = aes(x = class, color = class))
```

```
ggplot(data = mpg) +  
  geom_bar(mapping = aes(x = class, fill = class))
```

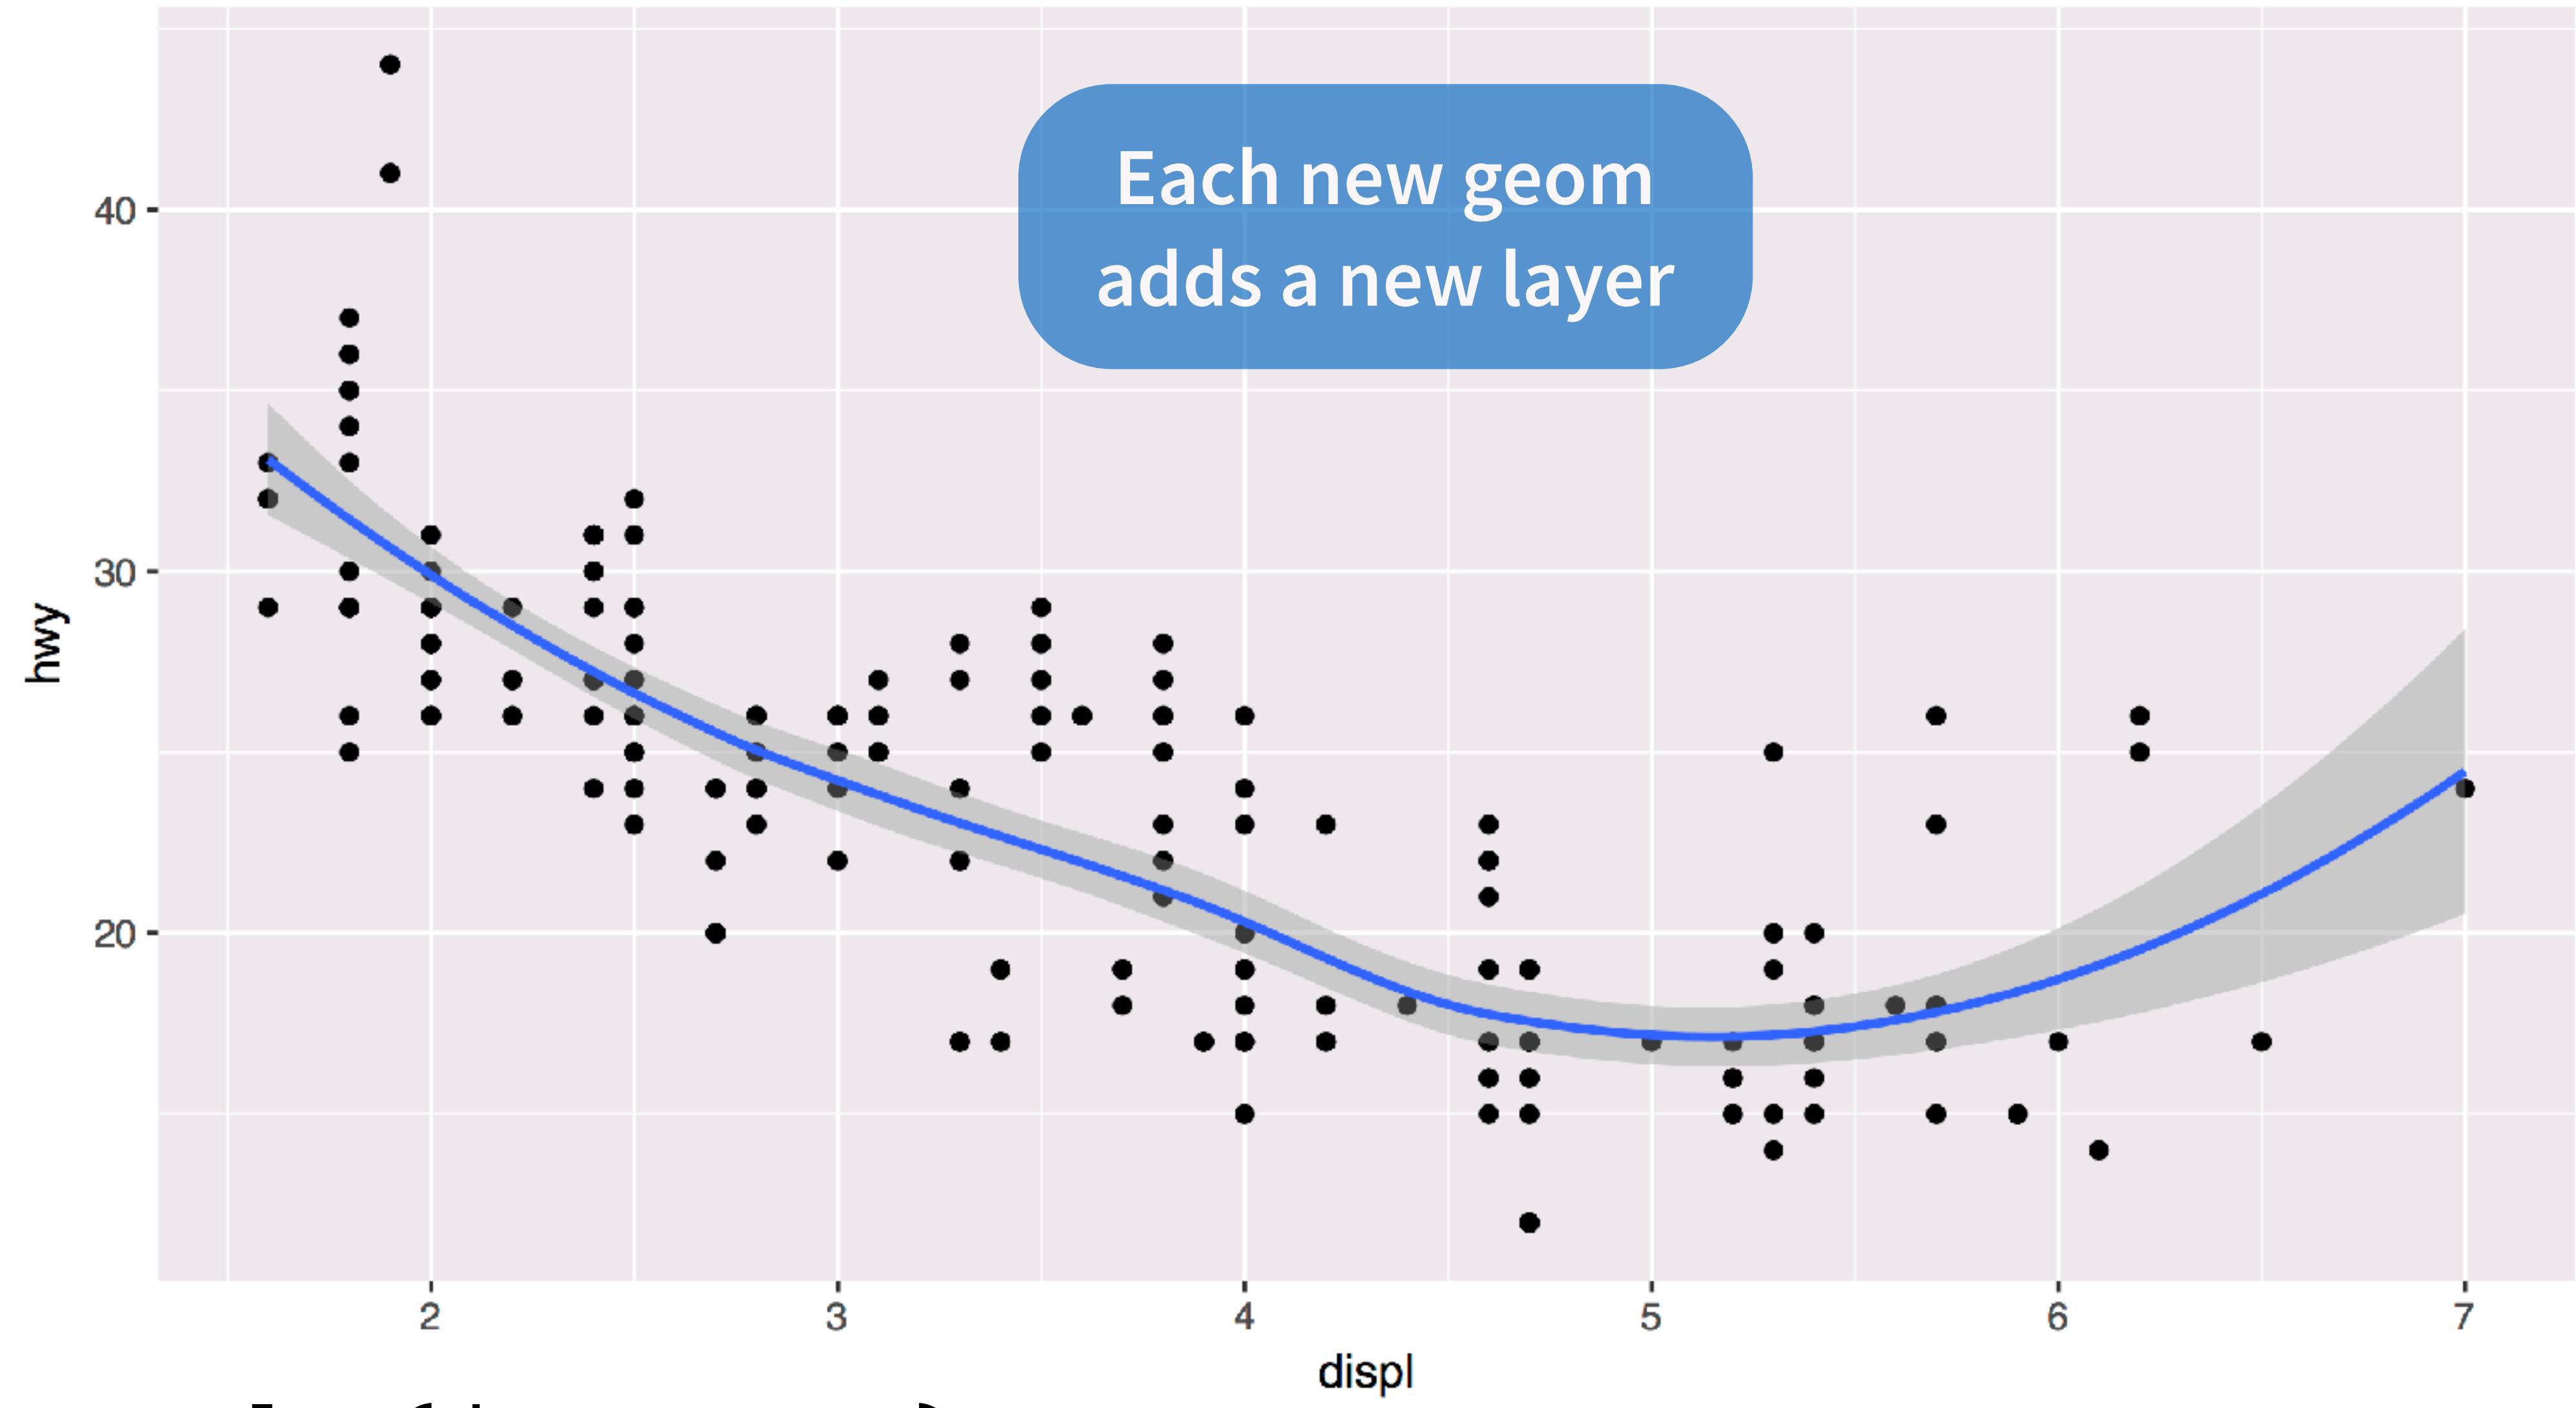

Your Turn 7

With your partner, predict what this code will do.

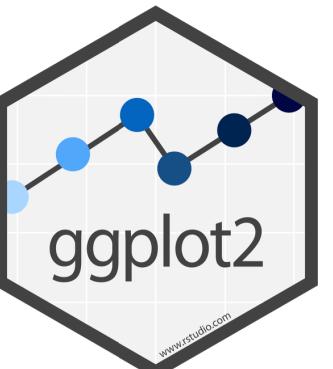

Then run it.

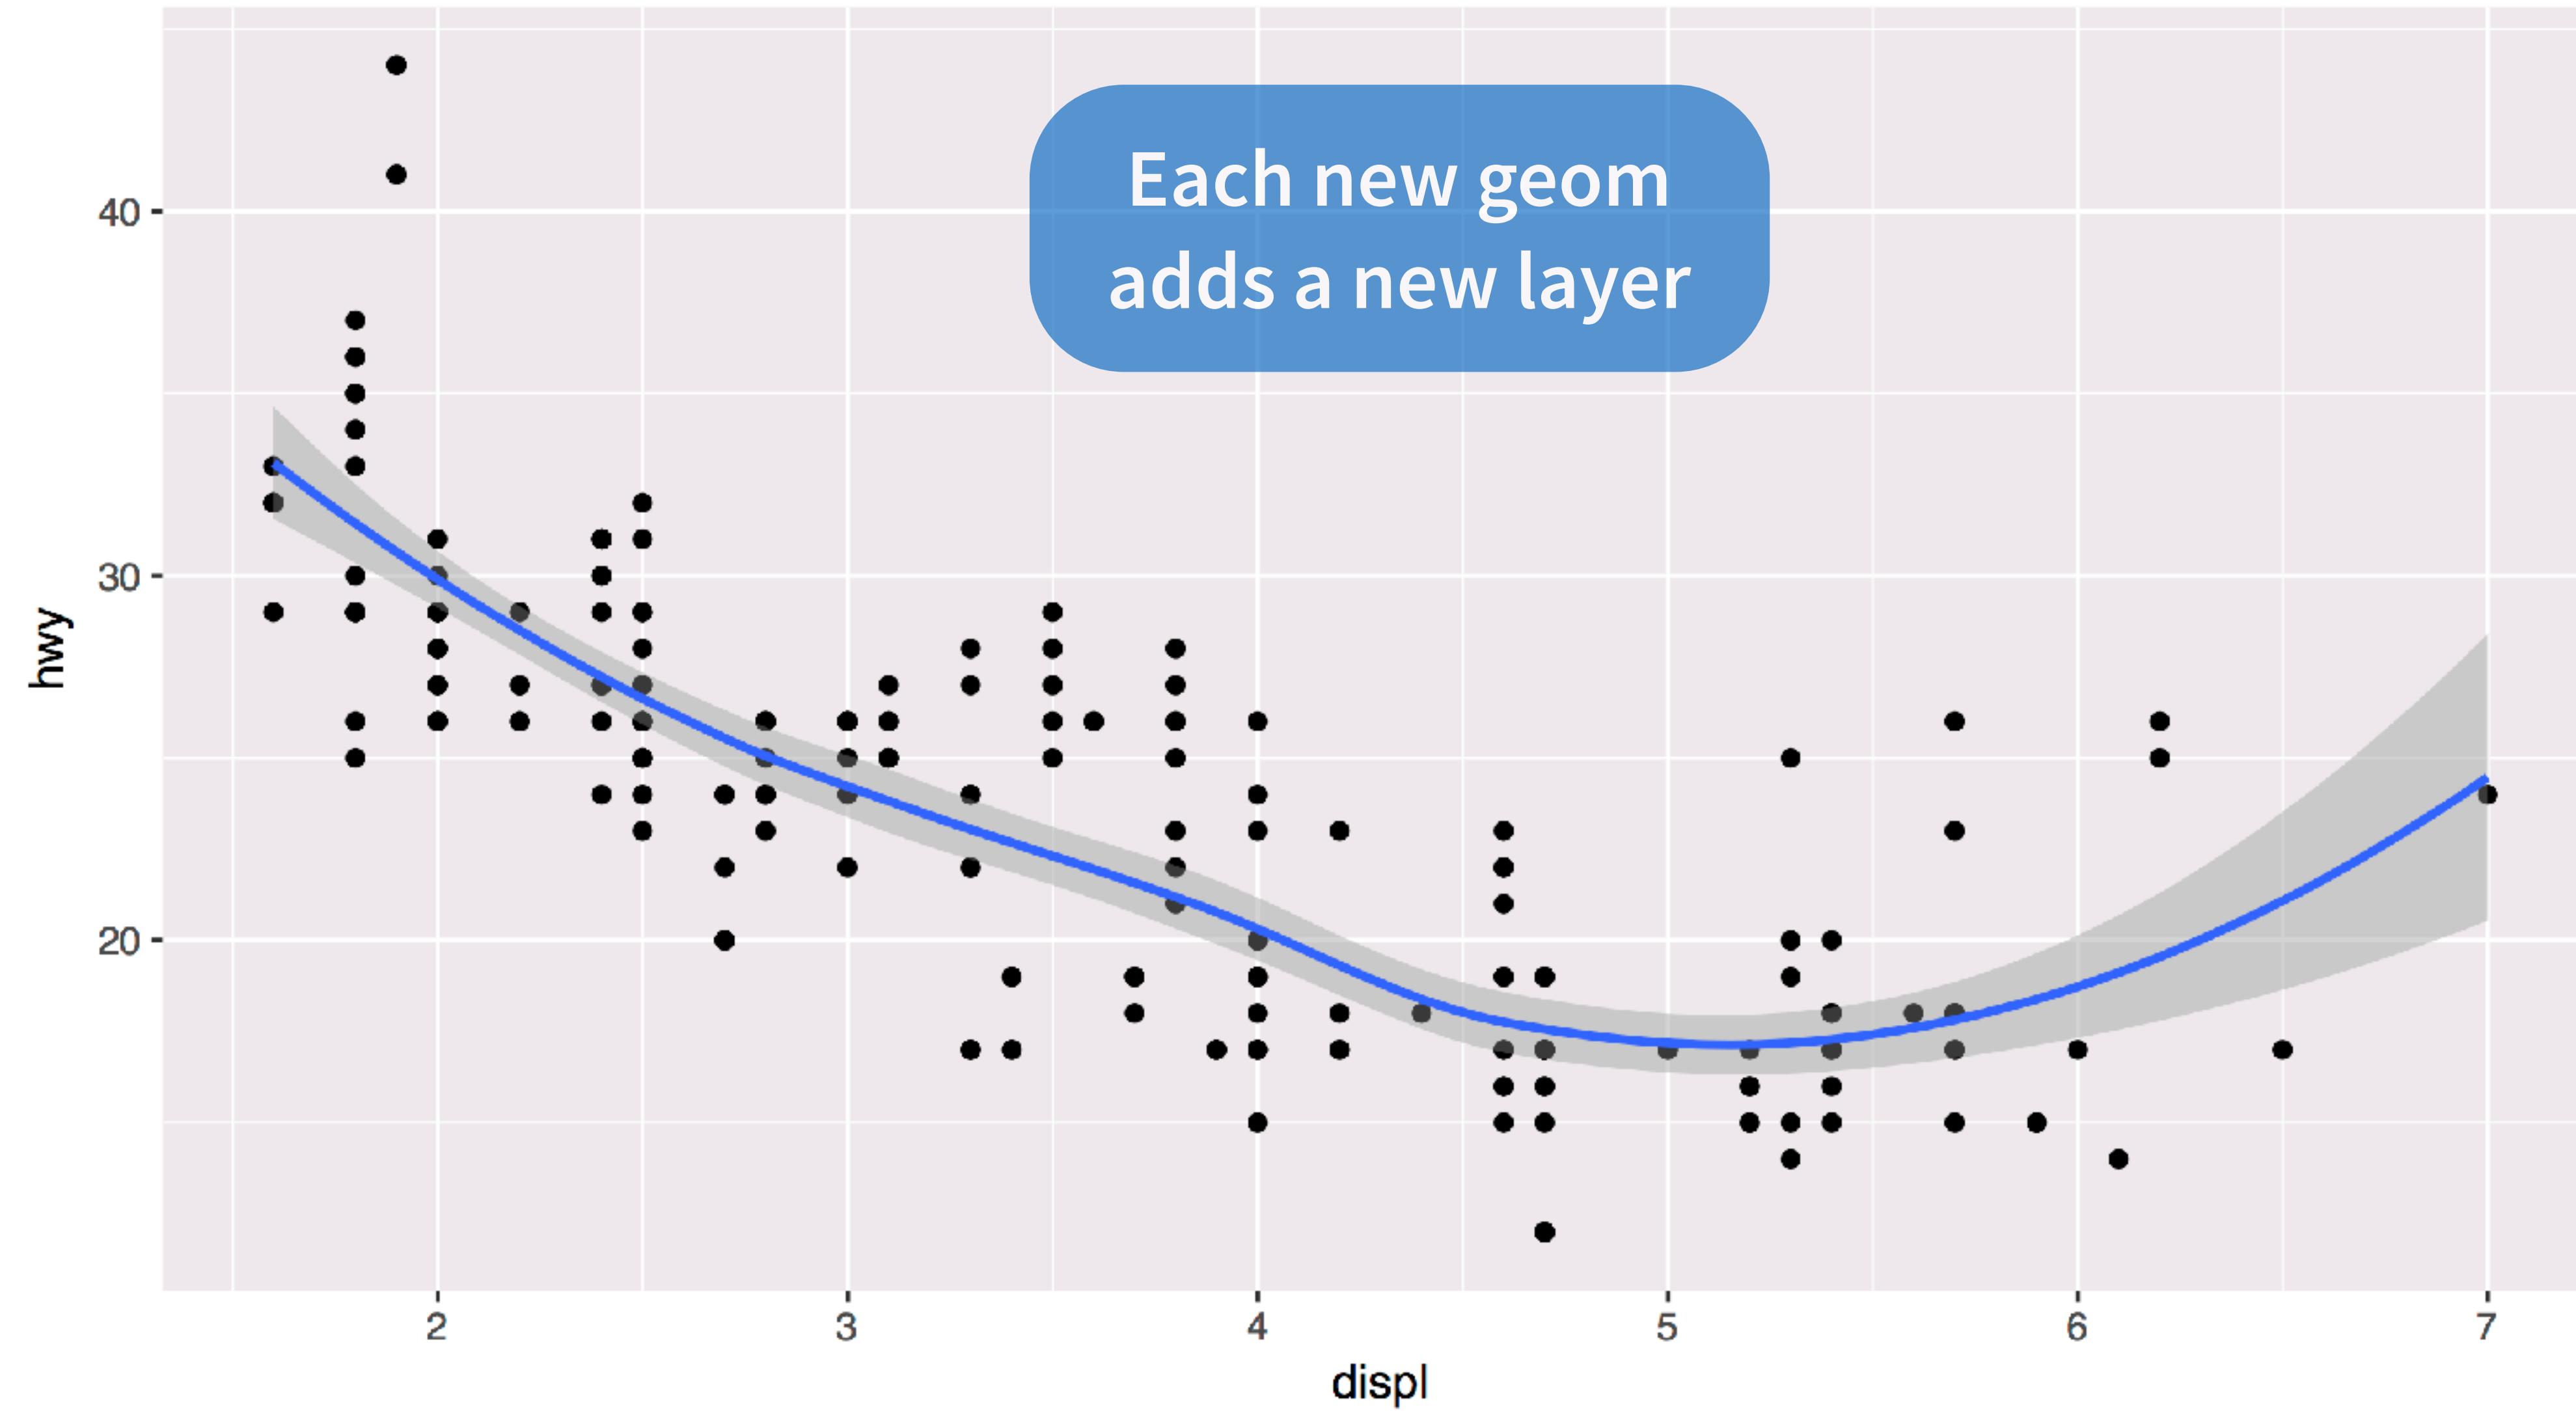

```
ggplot(mpg) +  
  geom_point(aes(displ, hwy)) +  
  geom_smooth(aes(displ, hwy))
```

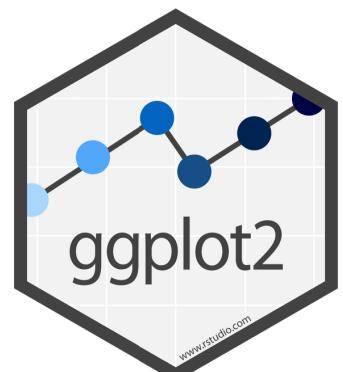

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy)) +  
  geom_smooth(mapping = aes(x = displ, y = hwy))
```

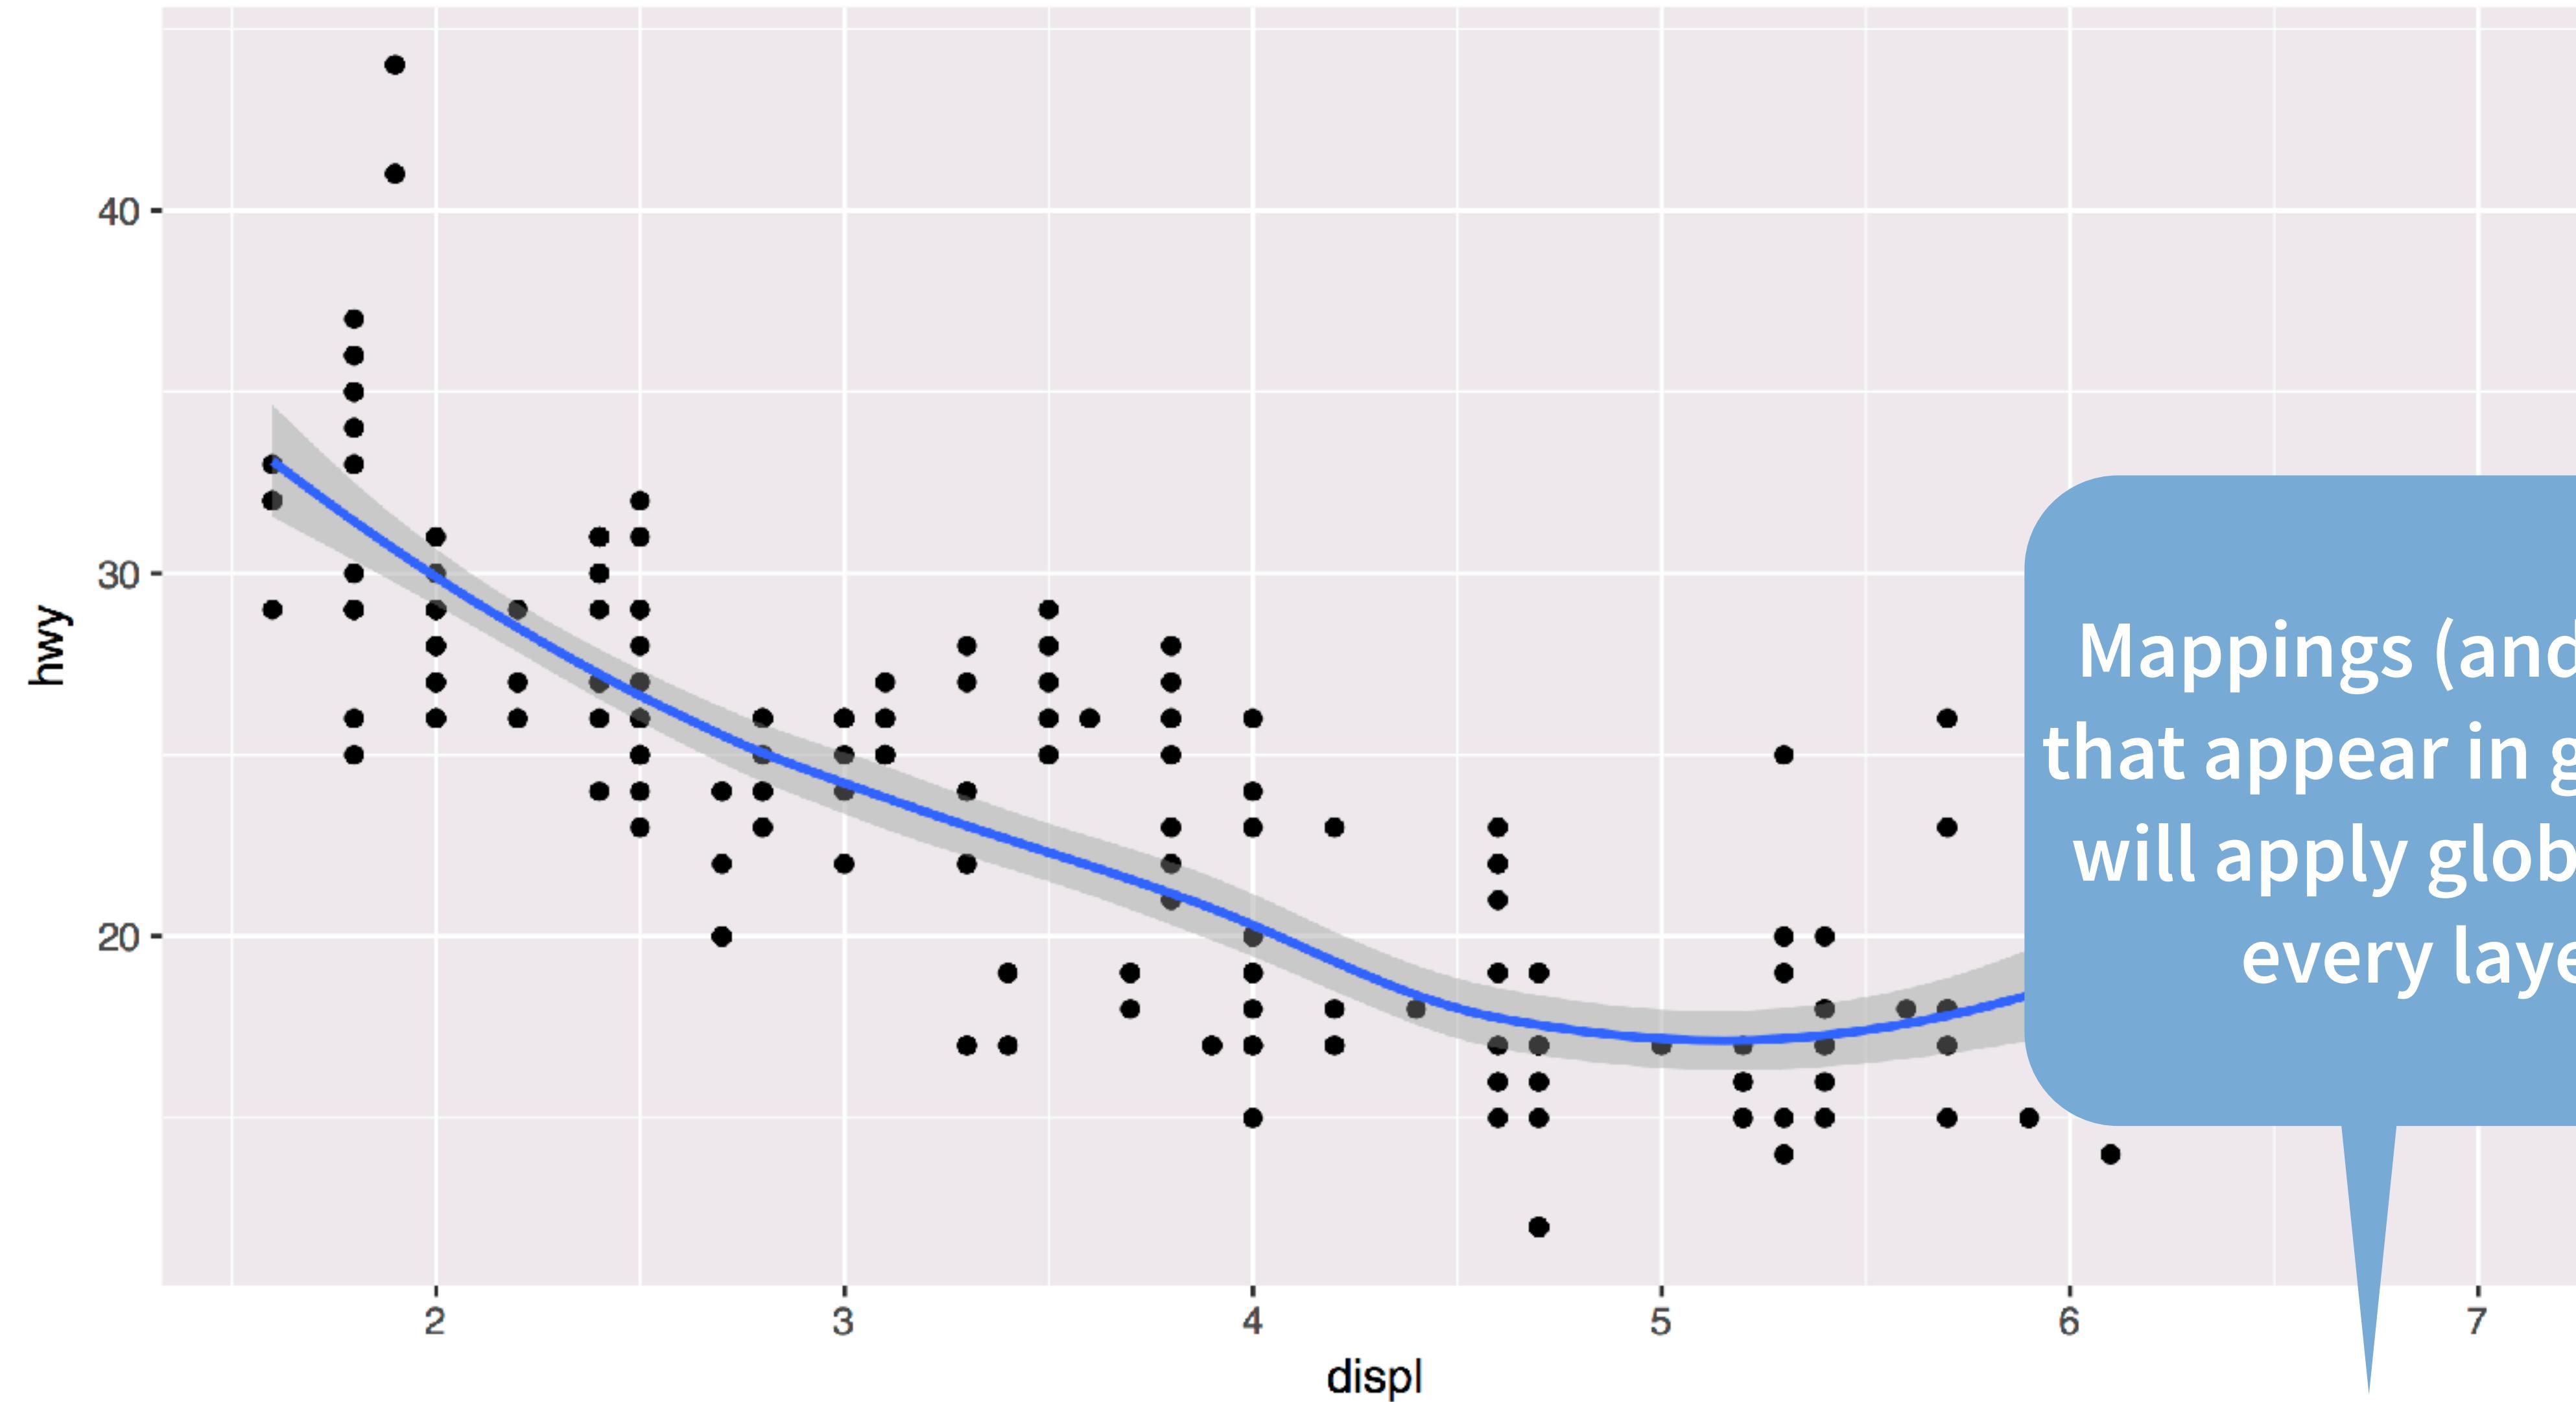

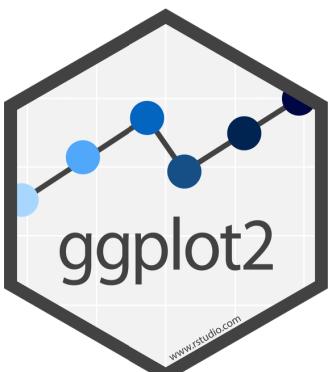

```
ggplot(data = mpg) +  
  geom_point(mapping = aes(x = displ, y = hwy)) +  
  geom_smooth(mapping = aes(x = displ, y = hwy))
```

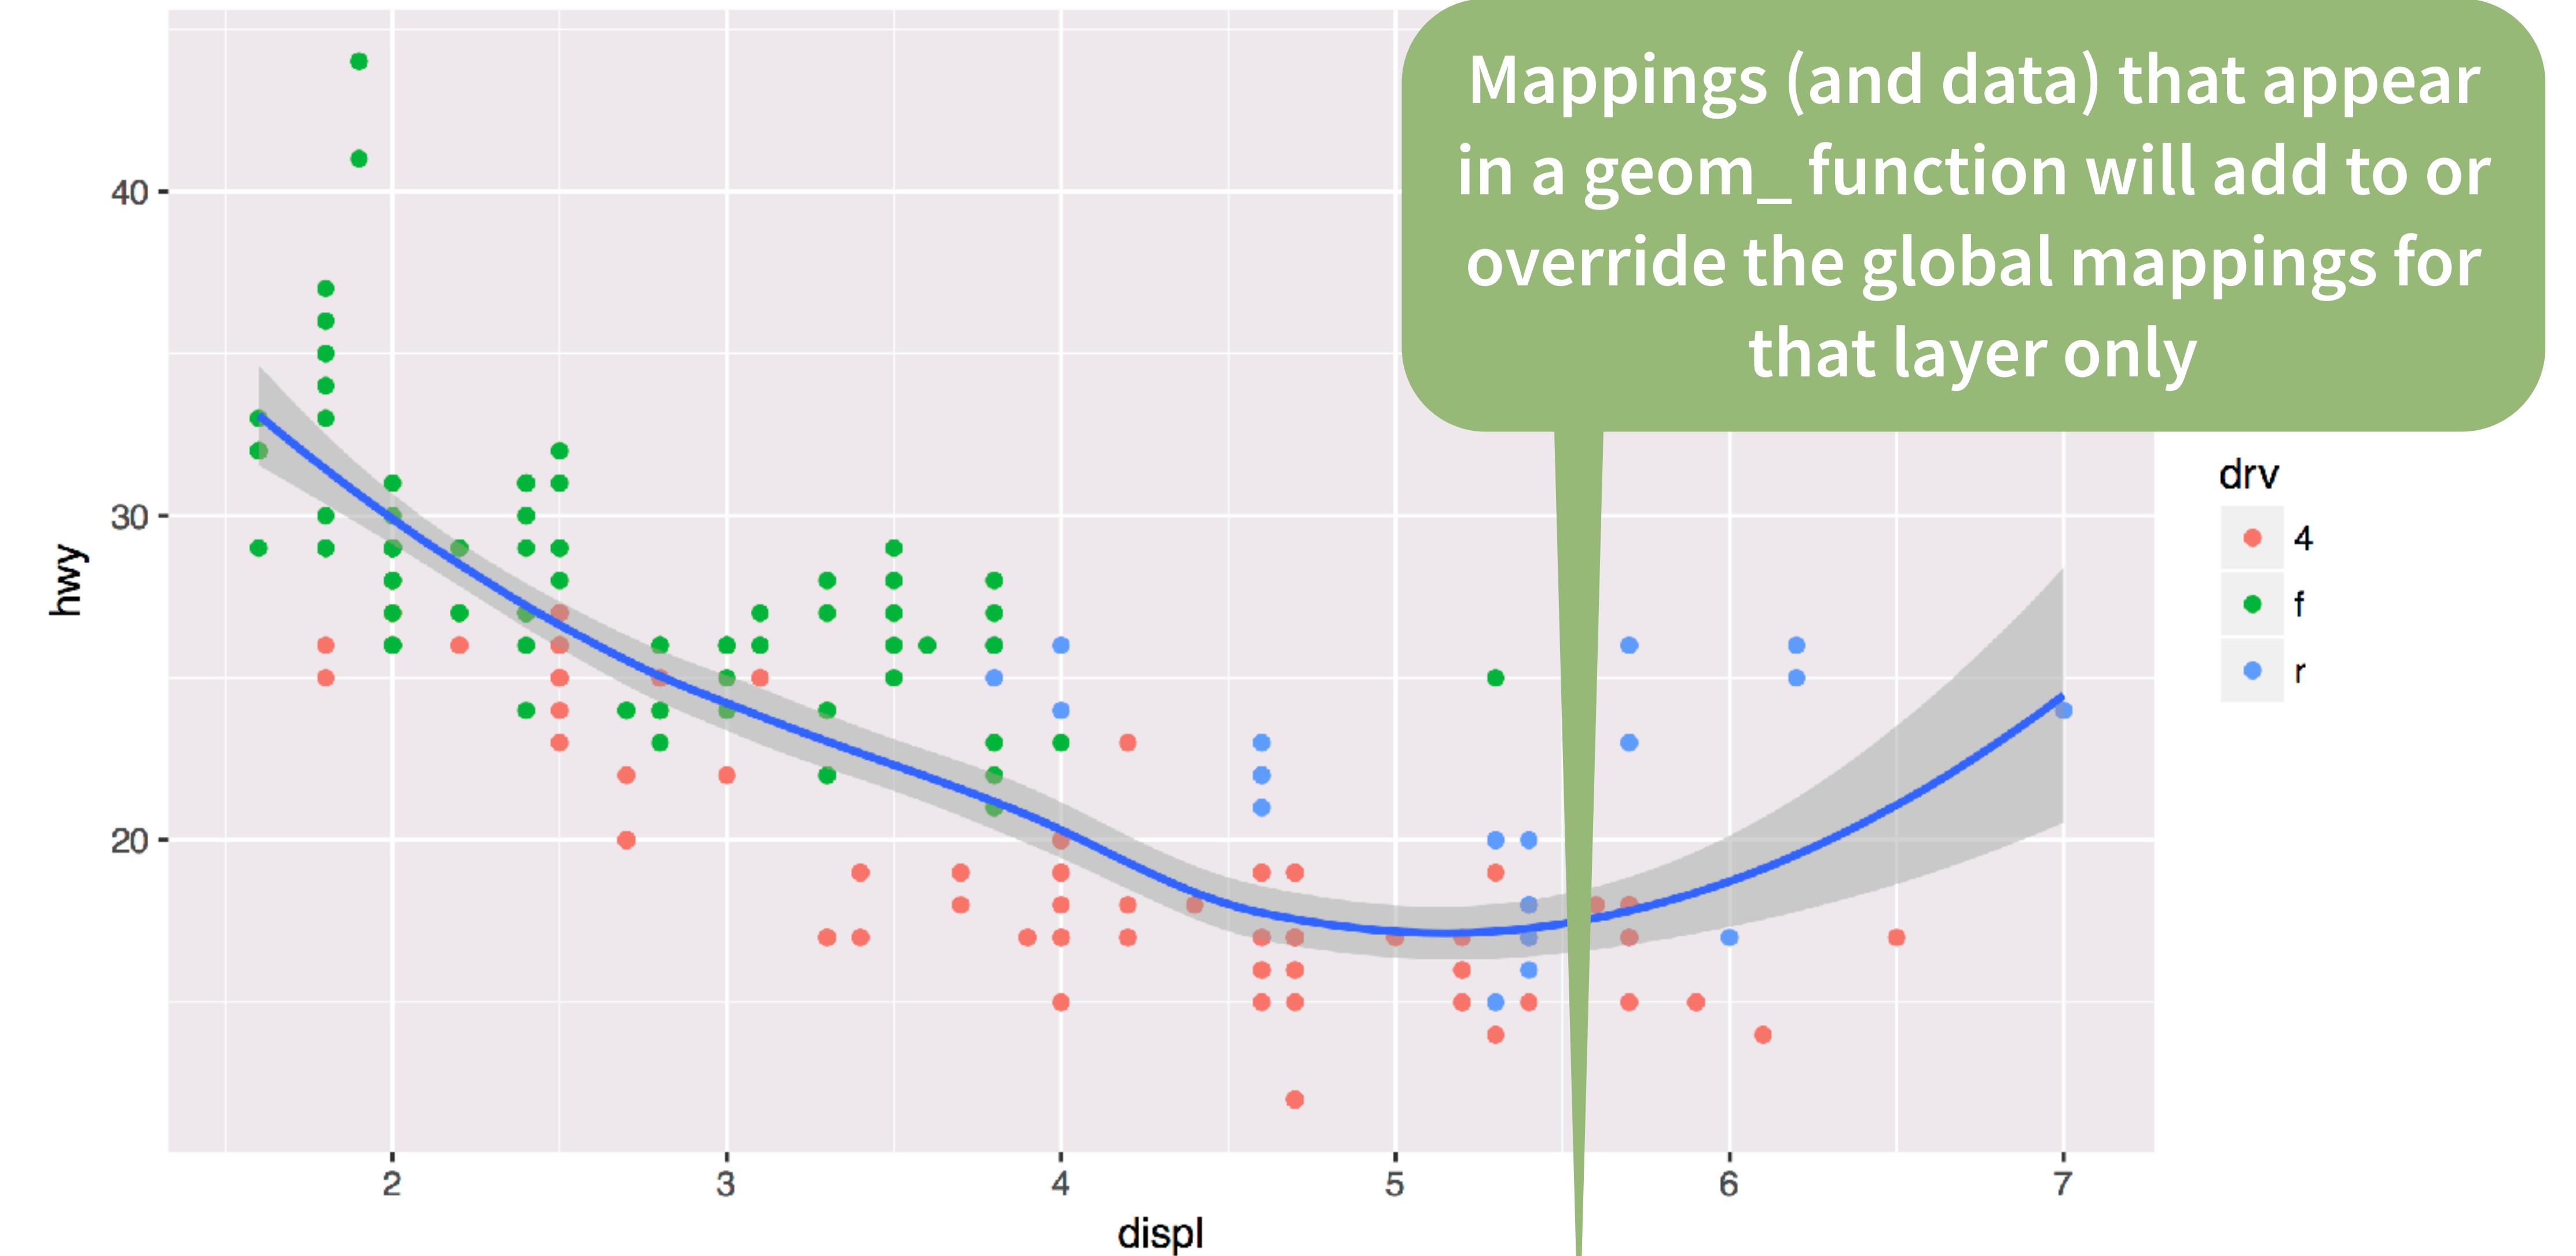

global vs. local

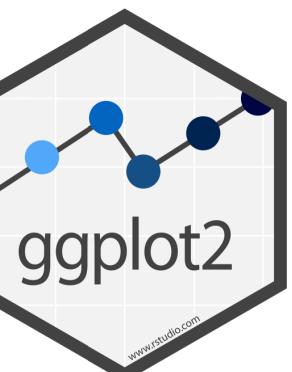

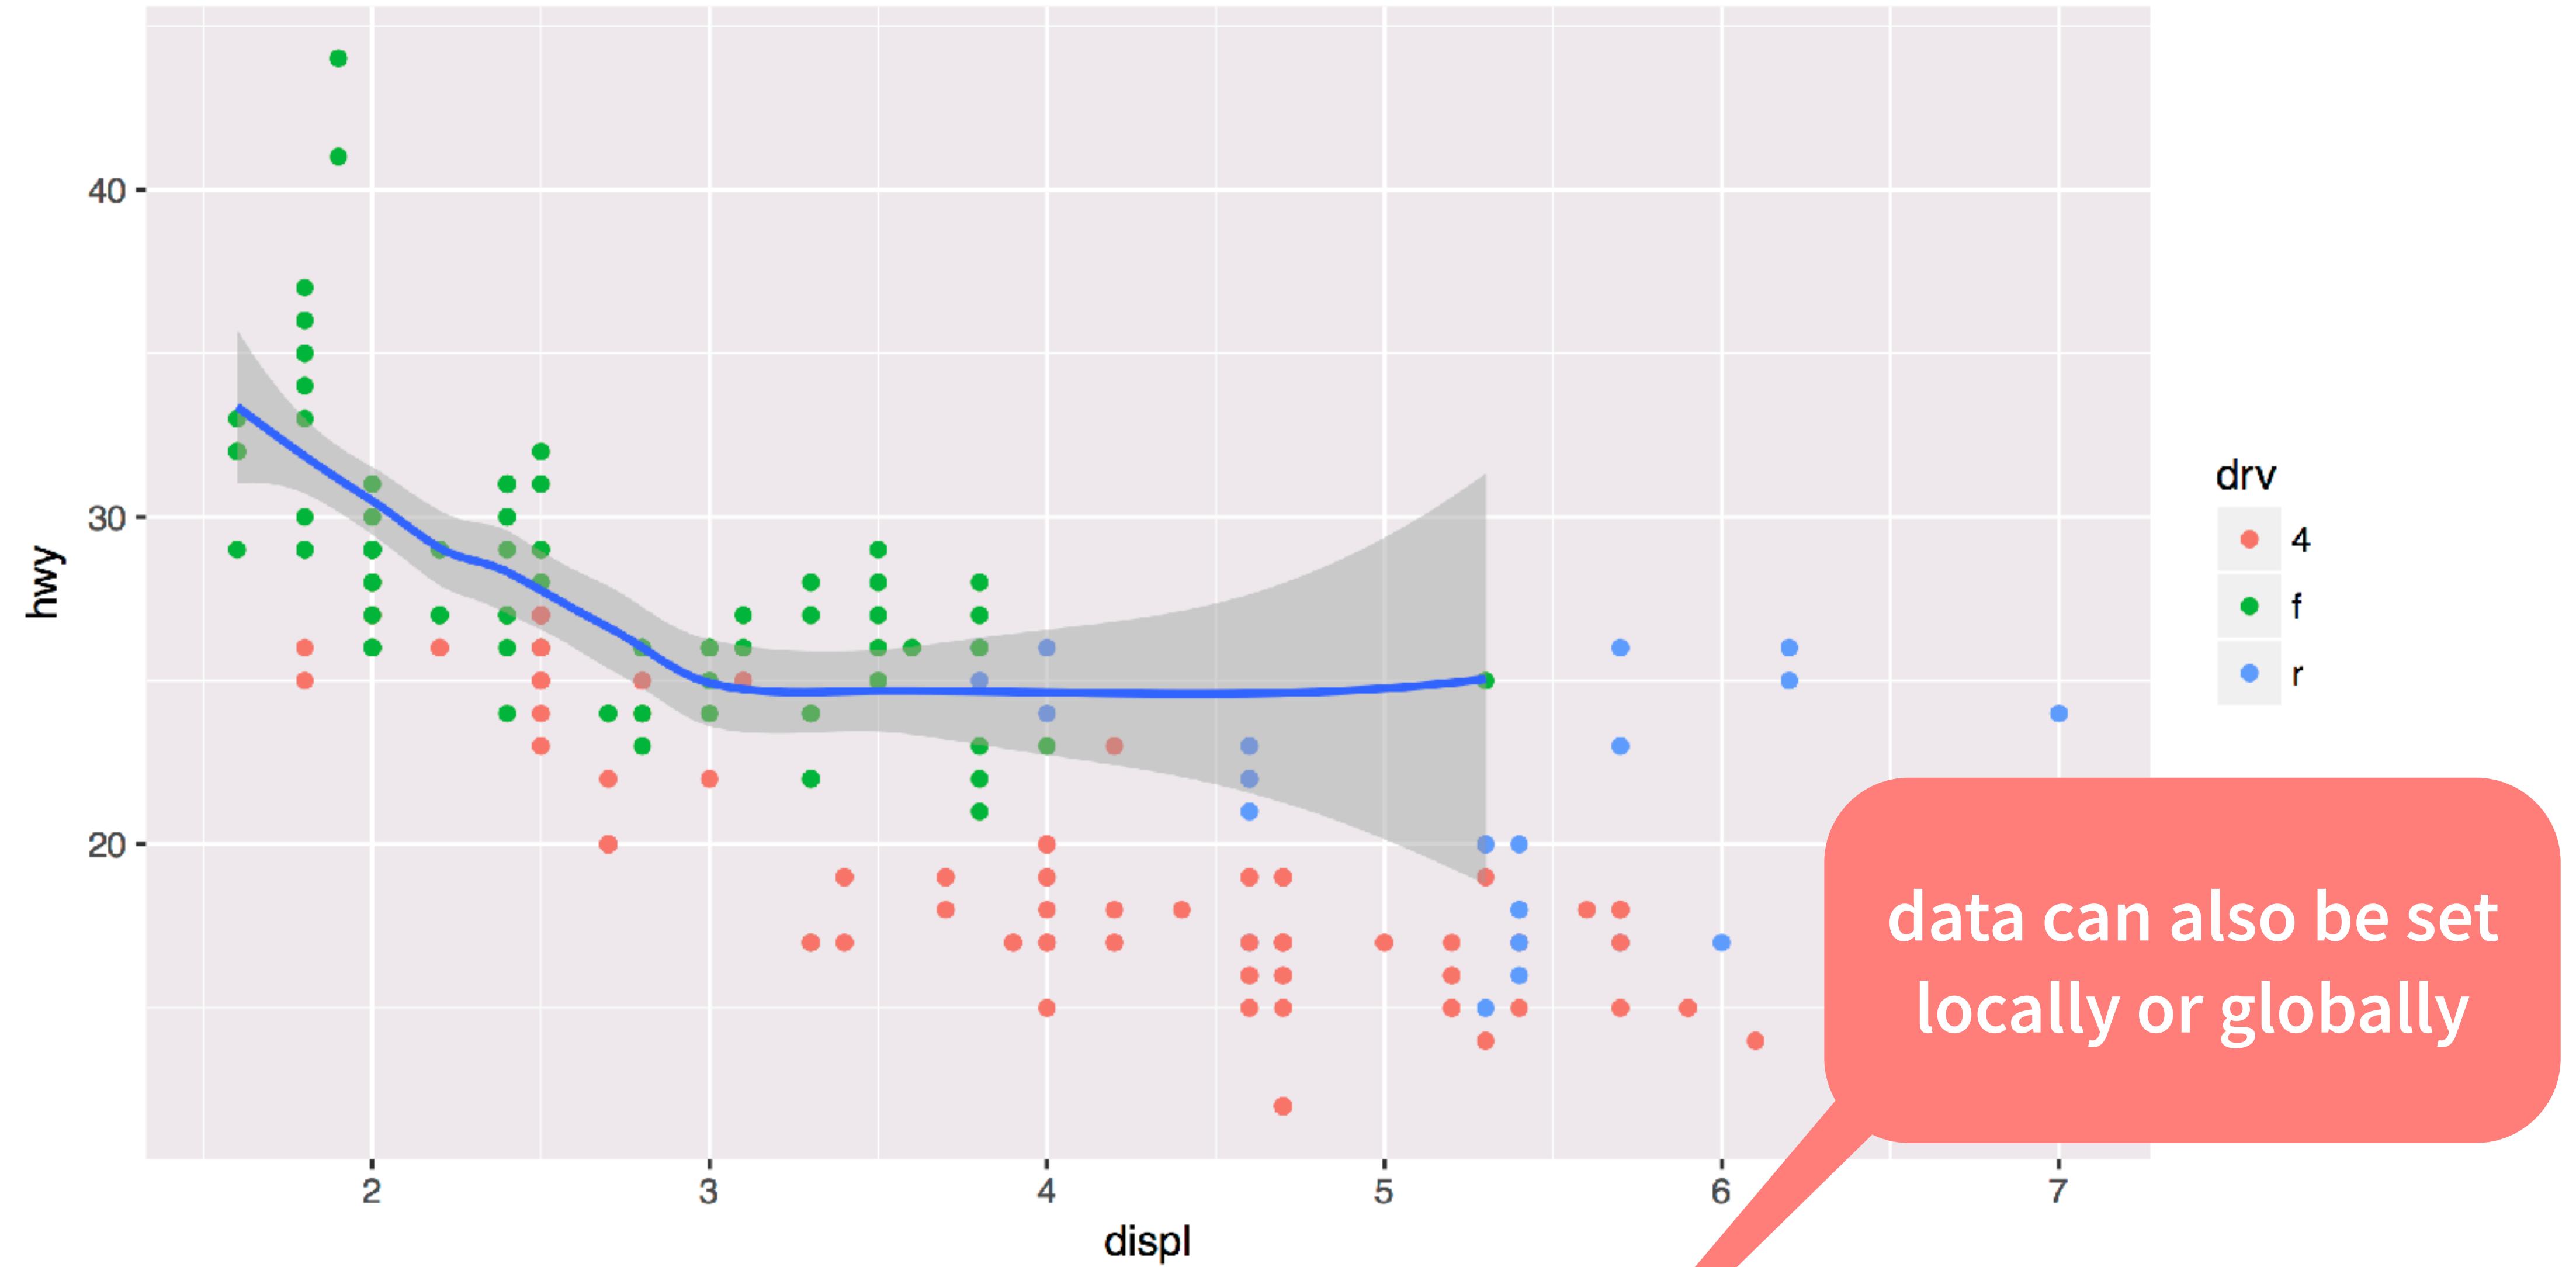

```
ggplot(data = mpg, mapping = aes(x = displ, y = hwy)) +  
  geom_point() +  
  geom_smooth()
```

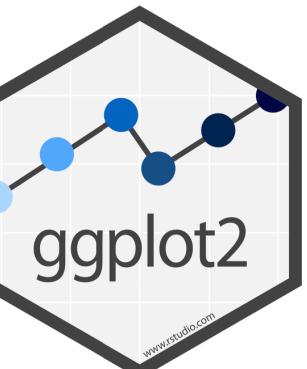

```
ggplot(data = mpg, mapping = aes(x = displ, y = hwy)) +  
  geom_point(mapping = aes(color = drv)) +  
  geom_smooth()
```

```
ggplot(data = mpg, mapping = aes(x = displ, y = hwy)) +  
  geom_point(mapping = aes(color = drv)) +  
  geom_smooth(data = filter(mpg, drv == "f"))
```

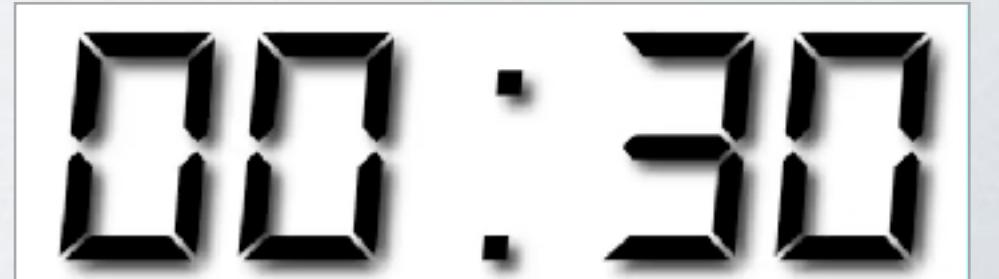

Saving graphs

Your Turn 8

What does this command return?

`getwd()`

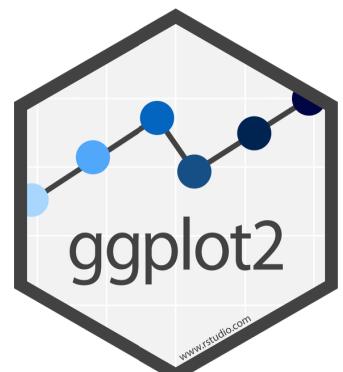

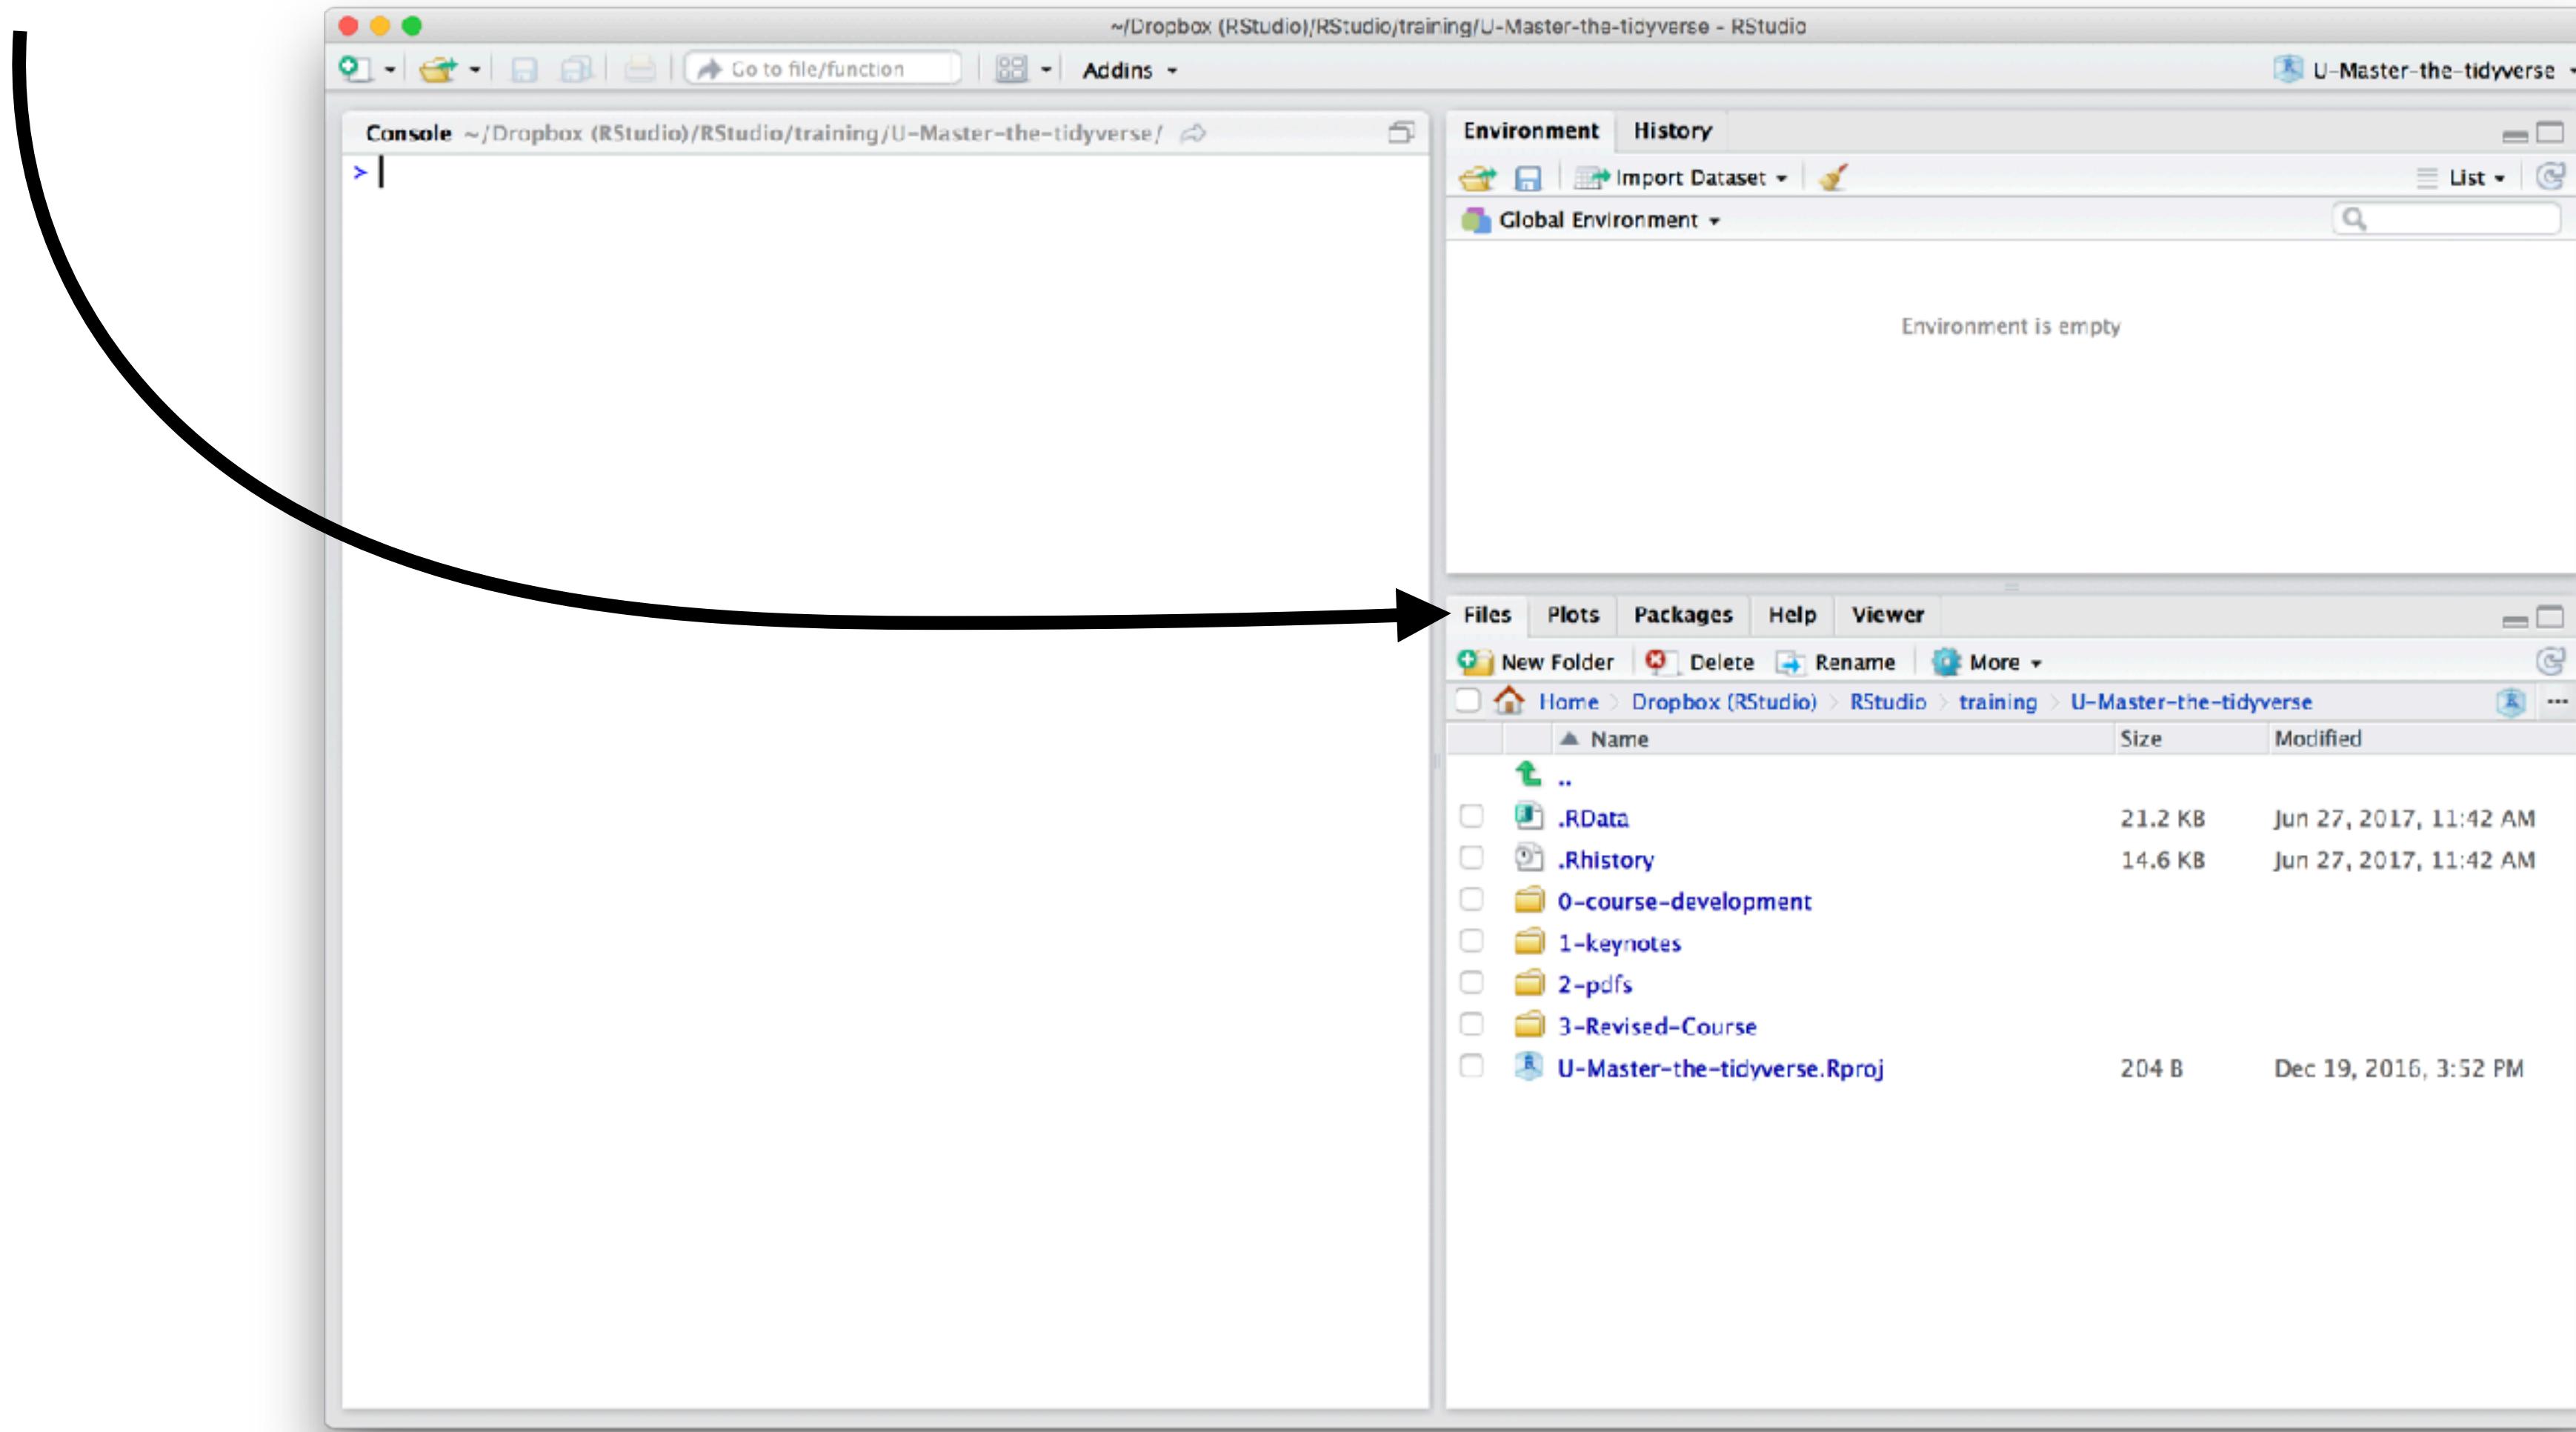

Working directory

R associates itself with a folder (i.e. directory) on your computer.

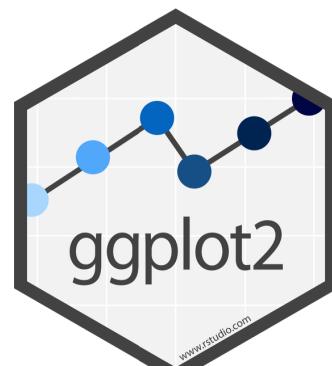

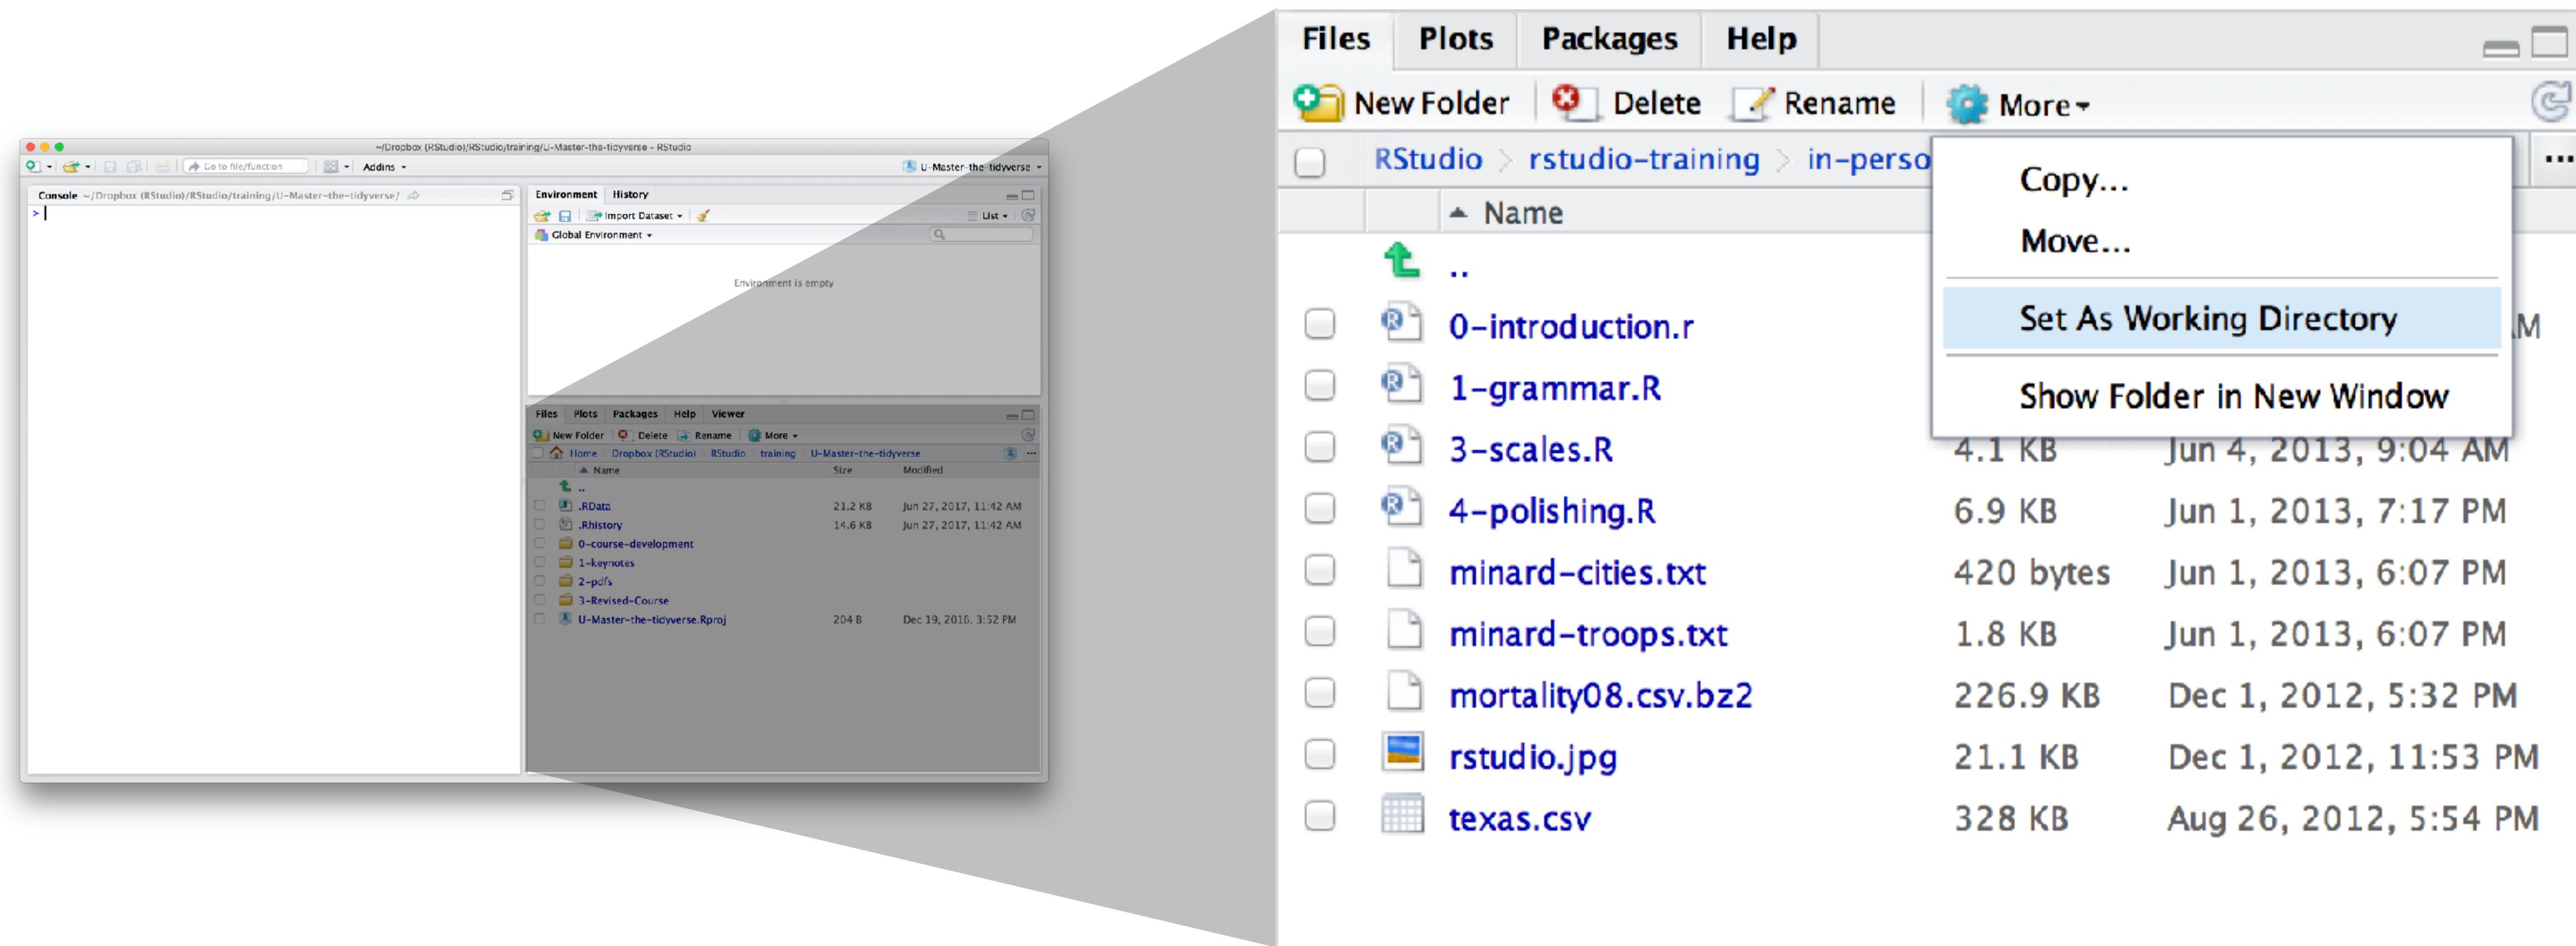

- This folder is known as your "**working directory**"
- When you save files, R will save them here
- When you load files, R will look for them here

The files pane of the IDE displays the contents of your working directory

Changing the Working directory

Navigate in the files pane to a new directory. Click
More > Set As Working Directory

Saving plots

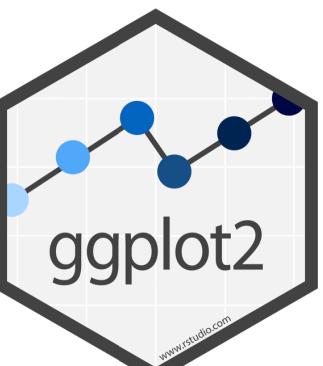

ggsave() saves the last plot.

Uses size on screen:

```
ggsave("my-plot.pdf")  
ggsave("my-plot.png")
```

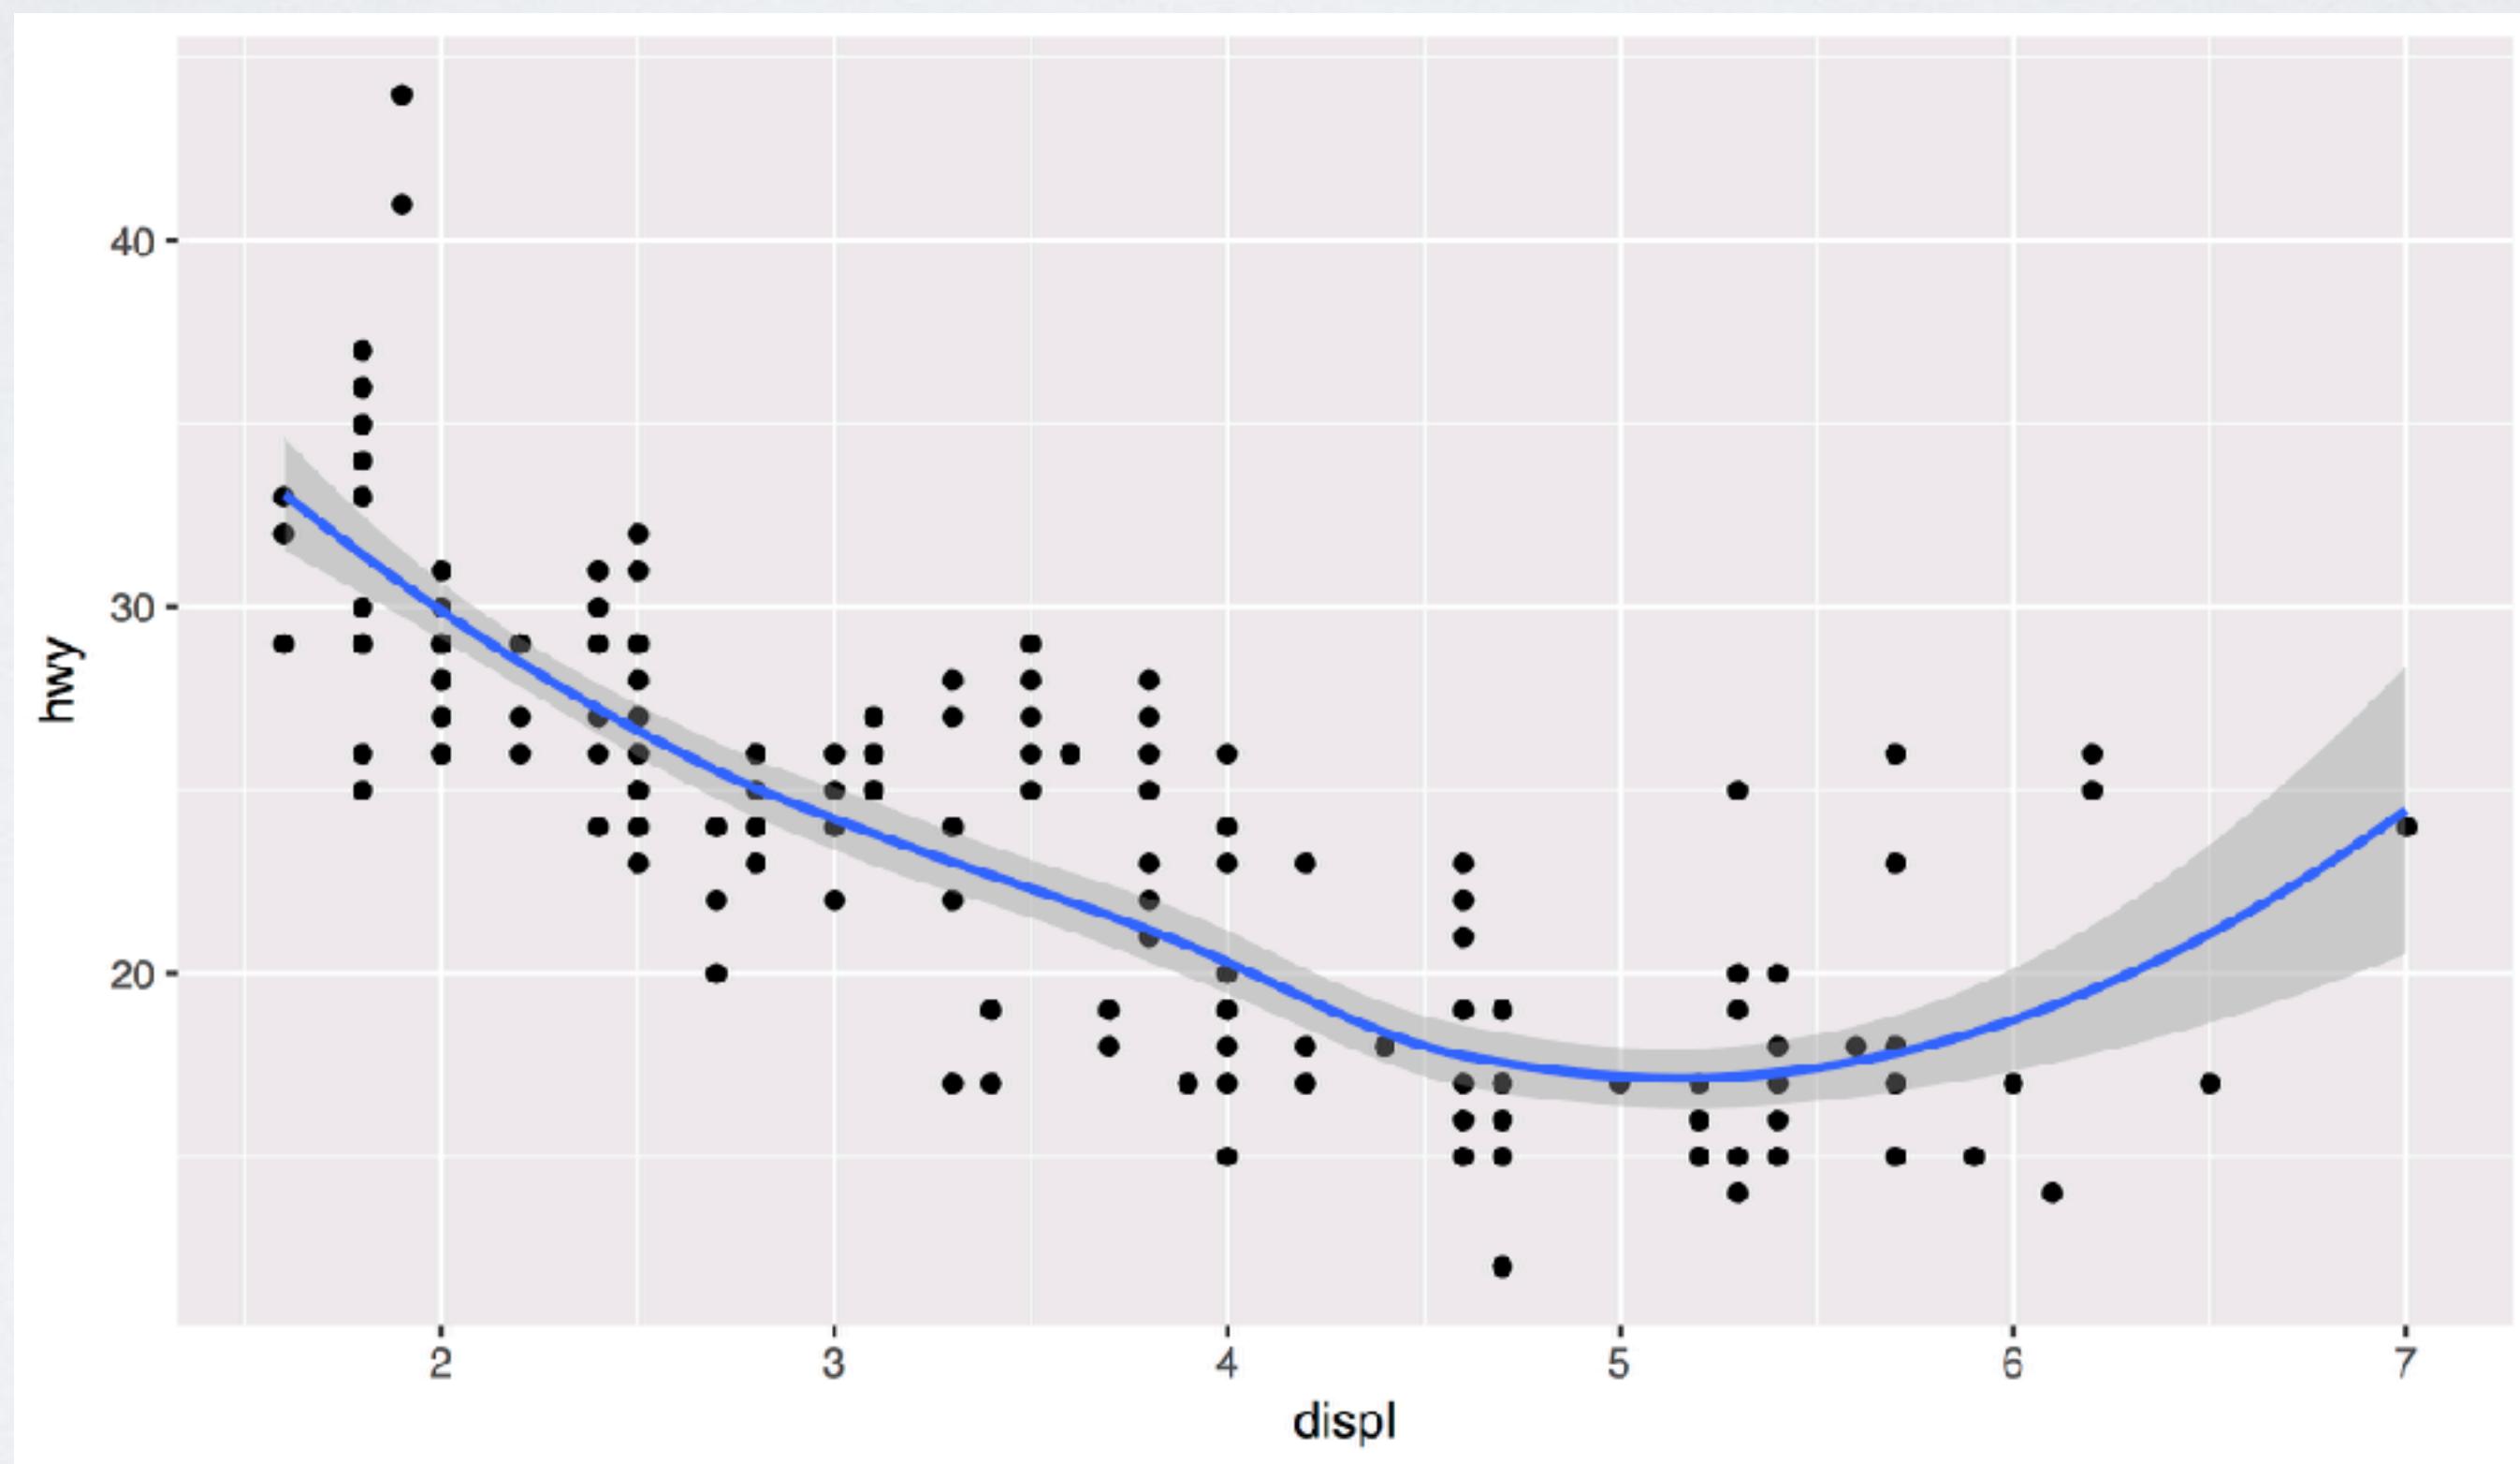

Specify size in inches

```
ggsave("my-plot.pdf", width = 6, height = 6)
```

Your Turn 9

Save your last plot and then locate it in your files pane.
(You may have to refresh the files list).

Grammar of Graphics

To make a graph

[template]

```
ggplot(data = <DATA>) +  
<GEOM_FUNCTION>(mapping = aes(<MAPPINGS>))
```

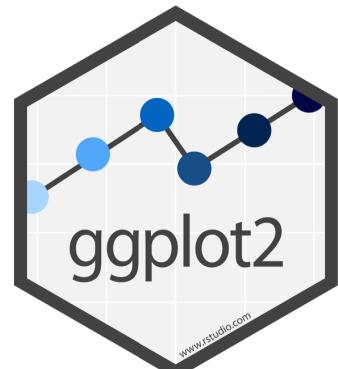

To make a graph

mpg	cyl	disp	hp
21.0	6	160.0	2
21.0	6	160.0	2
22.8	4	108.0	1
21.4	6	258.0	2
18.7	8	360.0	3
18.1	6	225.0	2
14.3	8	360.0	5
24.4	4	146.7	1
22.8	4	140.8	1
19.2	6	167.6	2
17.8	6	167.6	2
16.4	8	275.8	3
17.3	8	275.8	3
15.2	8	275.8	3
10.4	8	472.0	4
10.4	8	460.0	4
14.7	8	440.0	4
32.4	4	78.7	1
30.4	4	75.7	1
33.9	4	71.1	1

data

1. Pick a **data** set

```
ggplot(data = <DATA>) +  
<GEOM_FUNCTION>(mapping = aes(<MAPPINGS>))
```

To make a graph

mpg	cyl	disp	hp
21.0	6	160.0	2
21.0	6	160.0	2
22.8	4	108.0	1
21.4	6	258.0	2
18.7	8	360.0	3
18.1	6	225.0	2
14.3	8	360.0	5
24.4	4	146.7	1
22.8	4	140.8	1
19.2	6	167.6	2
17.8	6	167.6	2
16.4	8	275.8	3
17.3	8	275.8	3
15.2	8	275.8	3
10.4	8	472.0	4
10.4	8	460.0	4
14.7	8	440.0	4
32.4	4	78.7	1
30.4	4	75.7	1
33.9	4	71.1	1

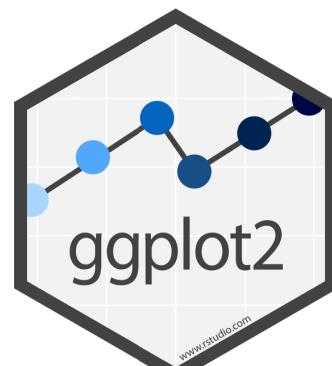

data

geom

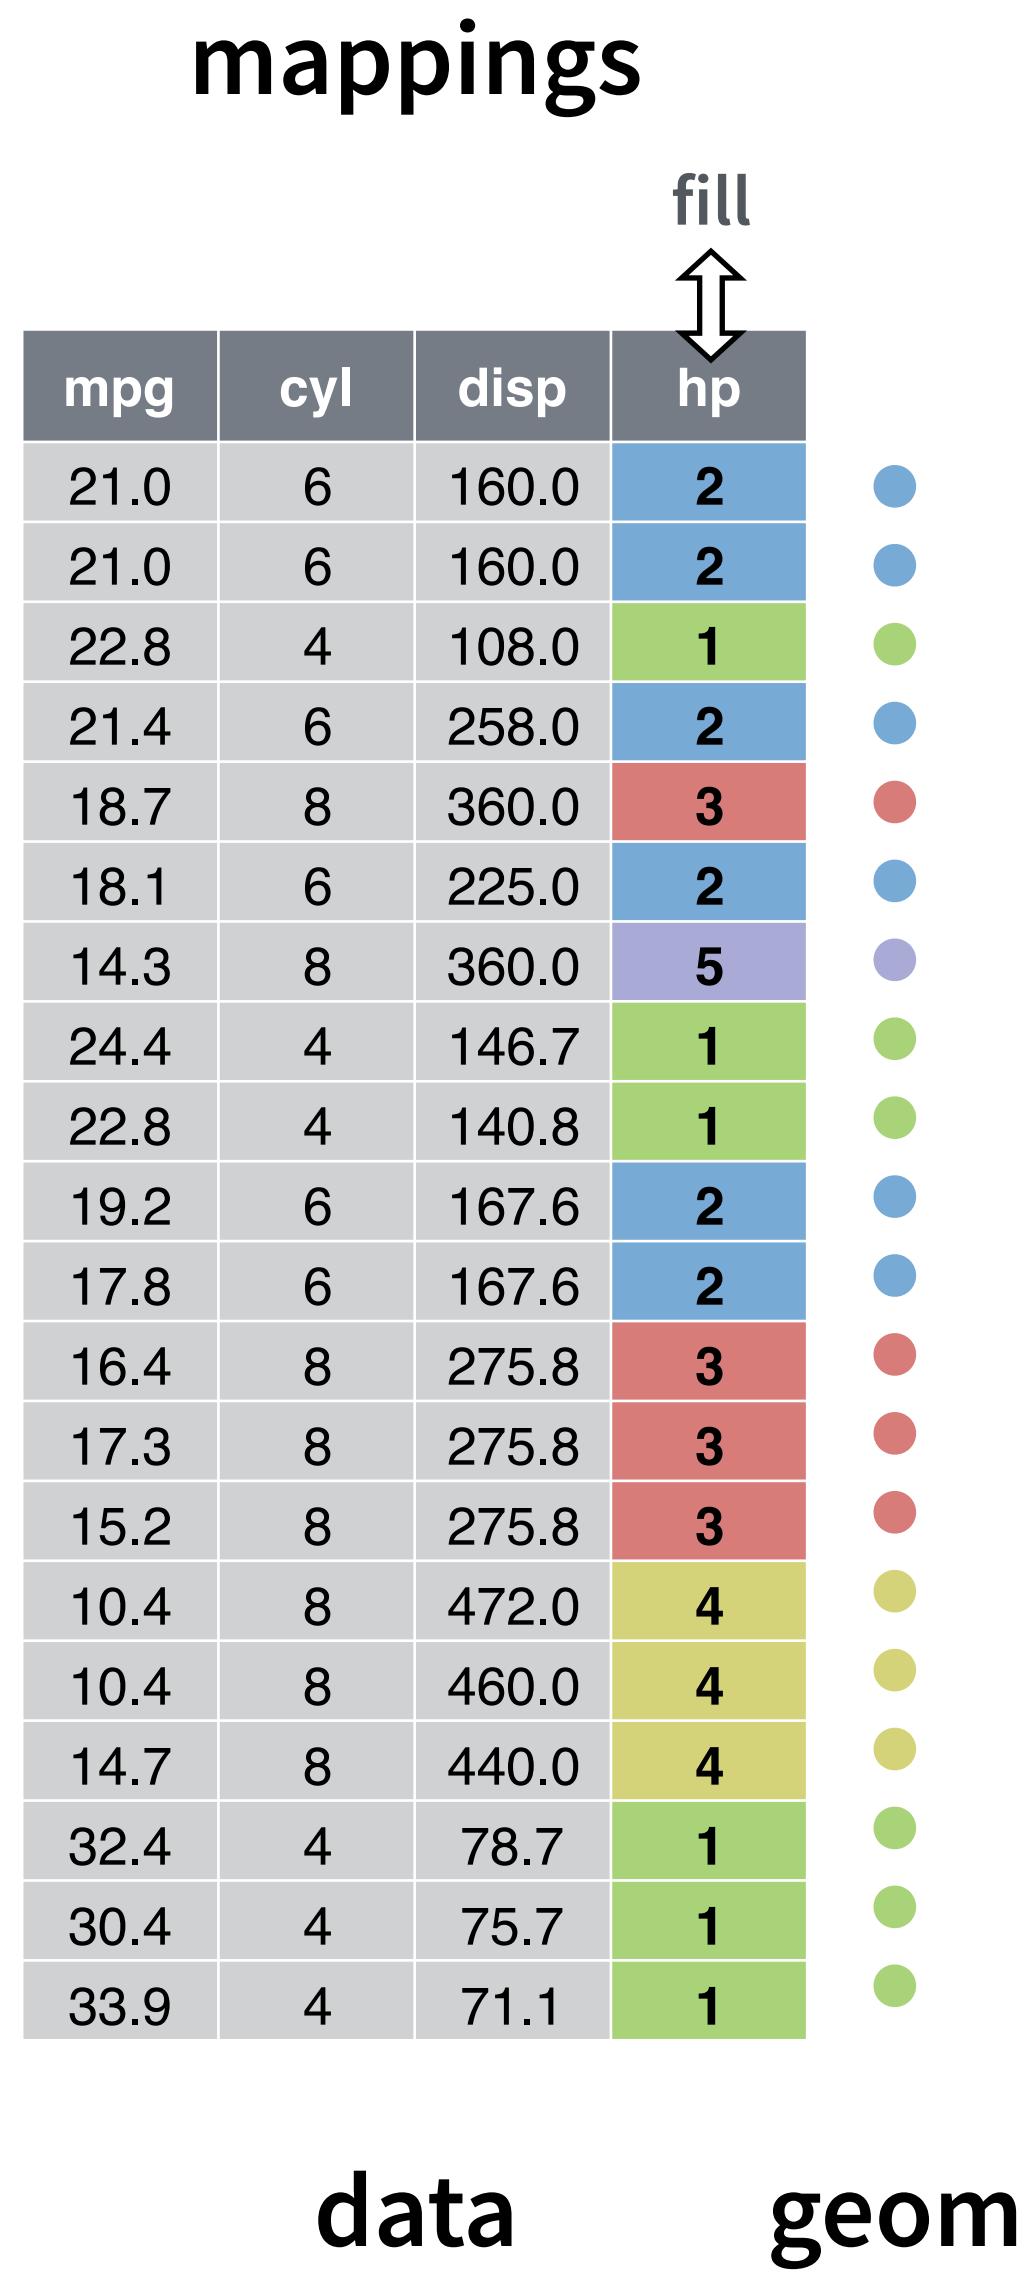

1. Pick a **data** set

```
ggplot(data = <DATA>) +  
<GEOM_FUNCTION>(mapping = aes(<MAPPINGS>))
```

2. Choose a **geom**
to display cases

To make a graph

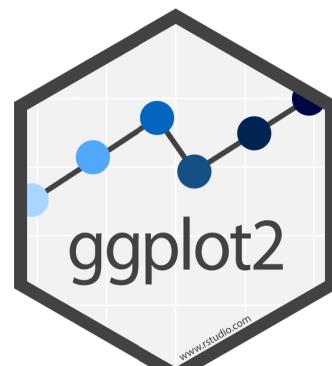

1. Pick a **data** set

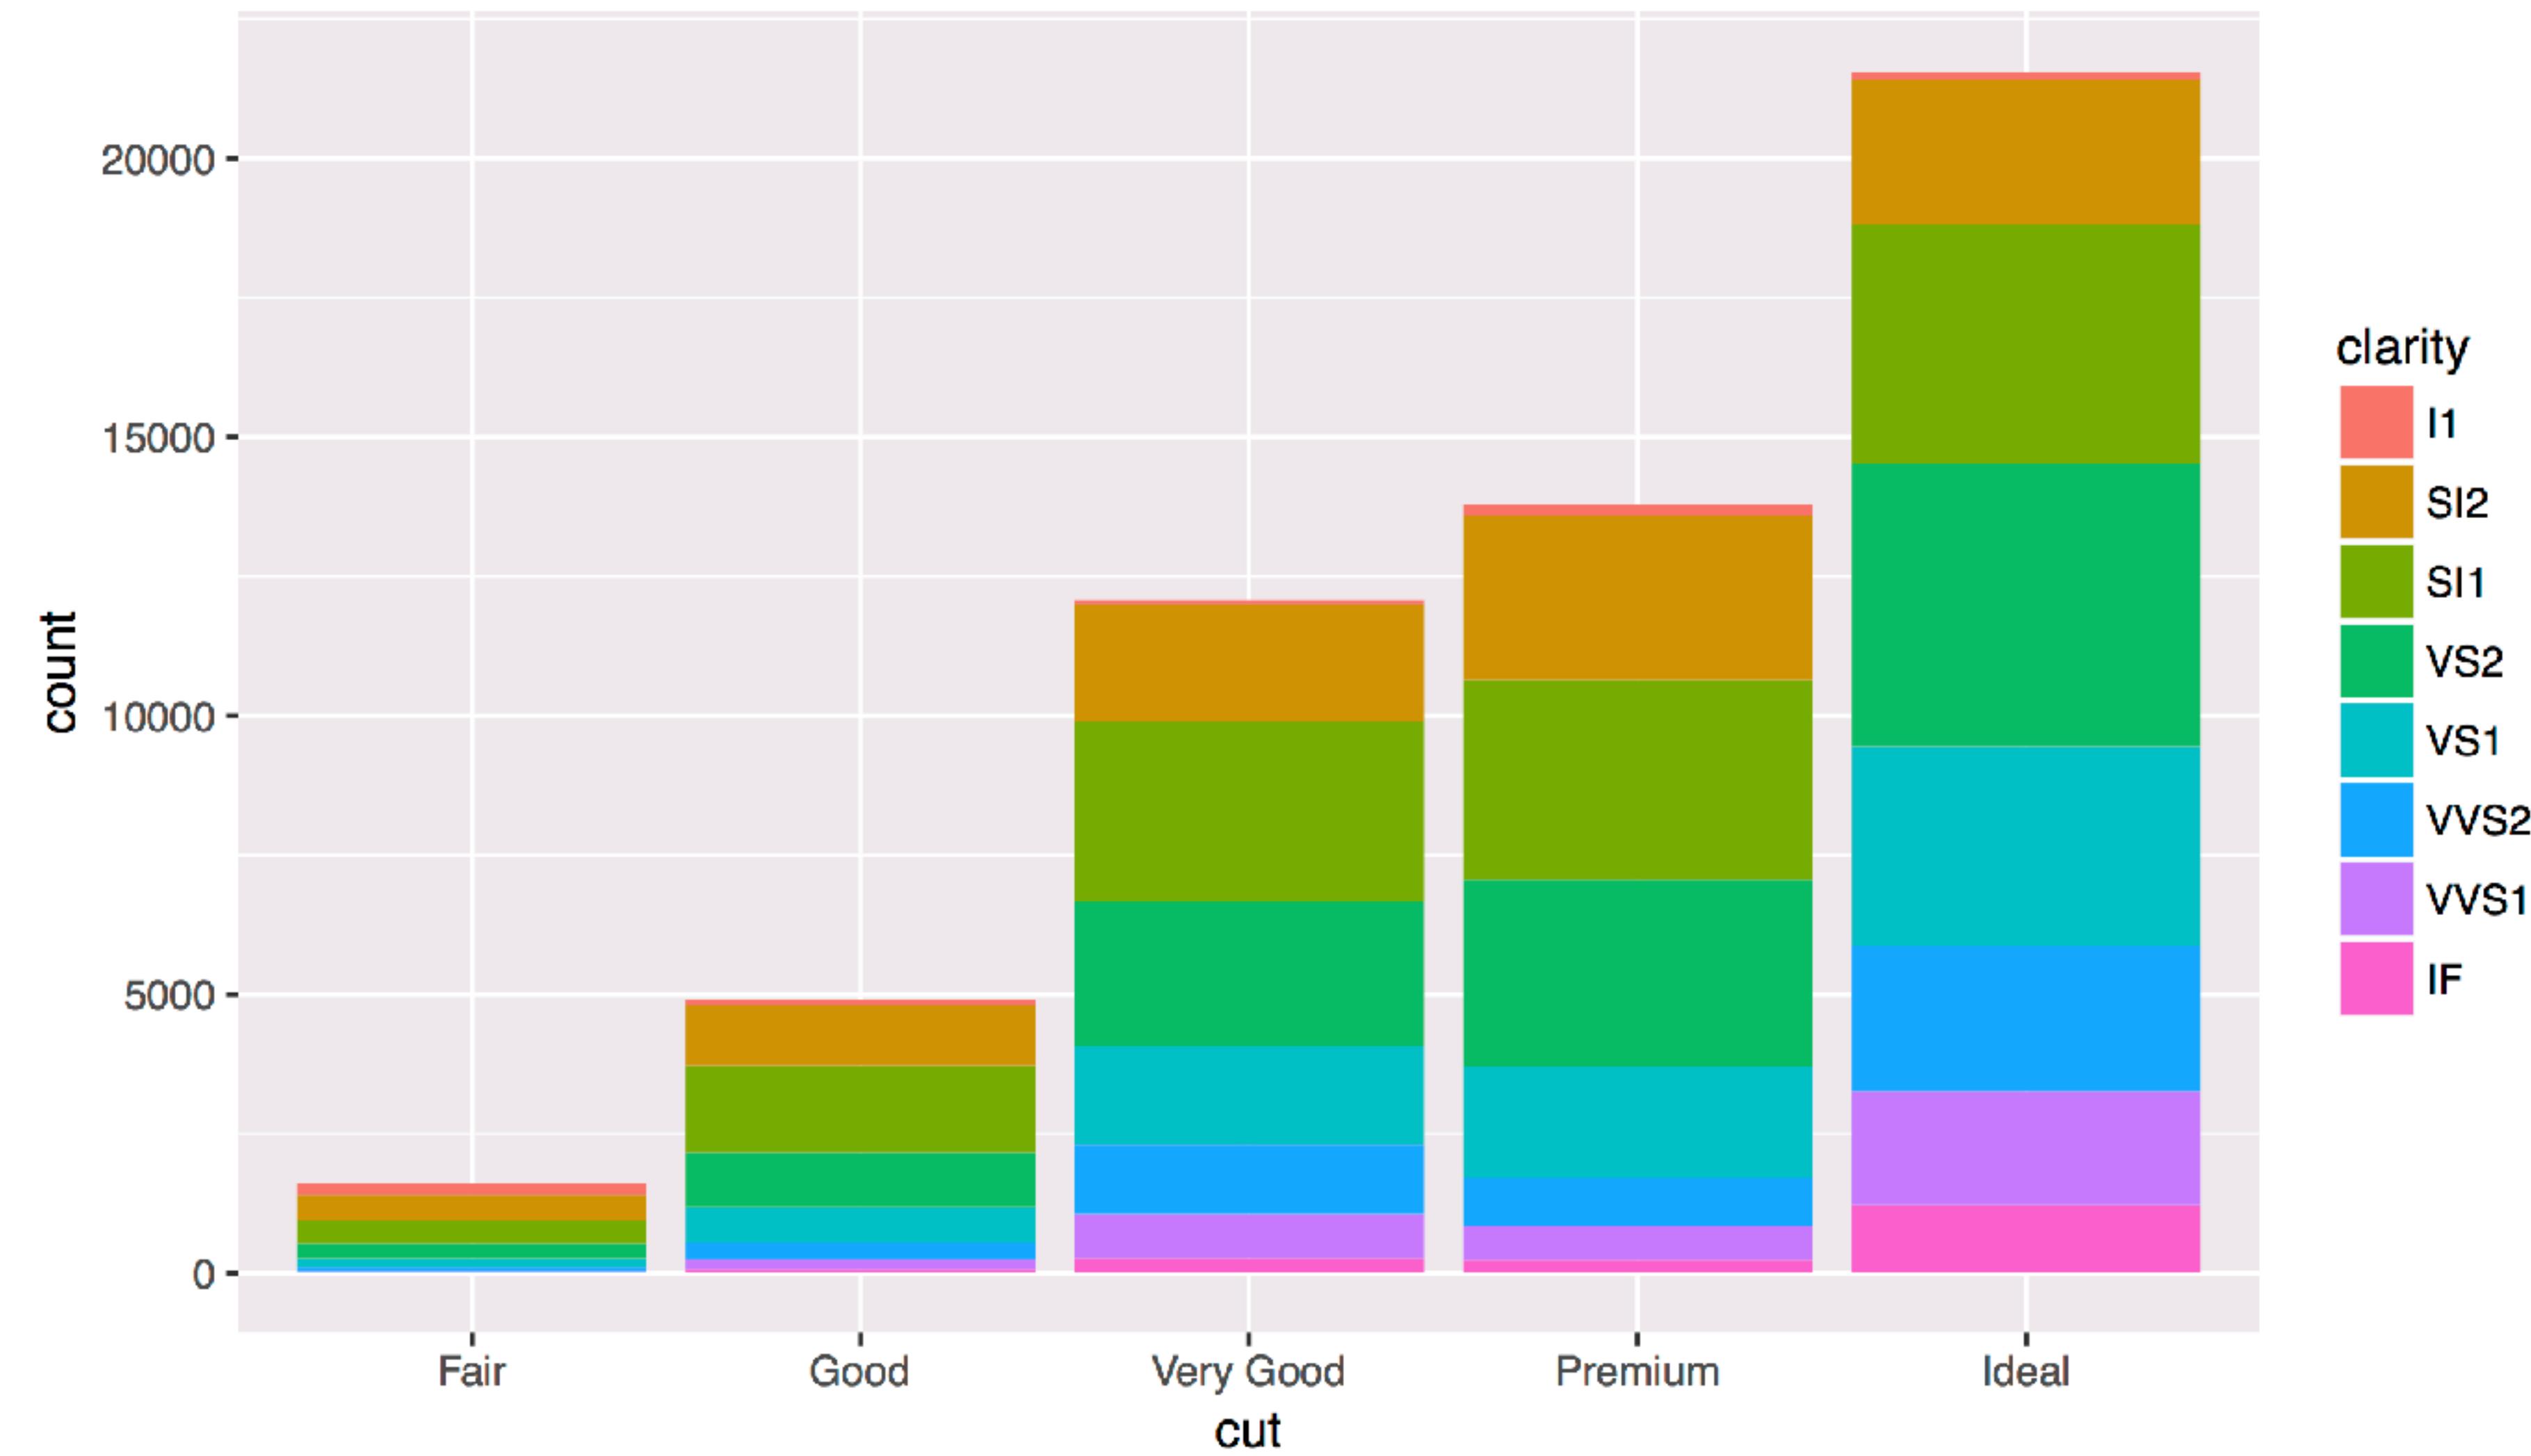

```
ggplot(data = <DATA>) +  
<GEOM_FUNCTION>(mapping = aes(<MAPPINGS>))
```

2. Choose a **geom**
to display cases

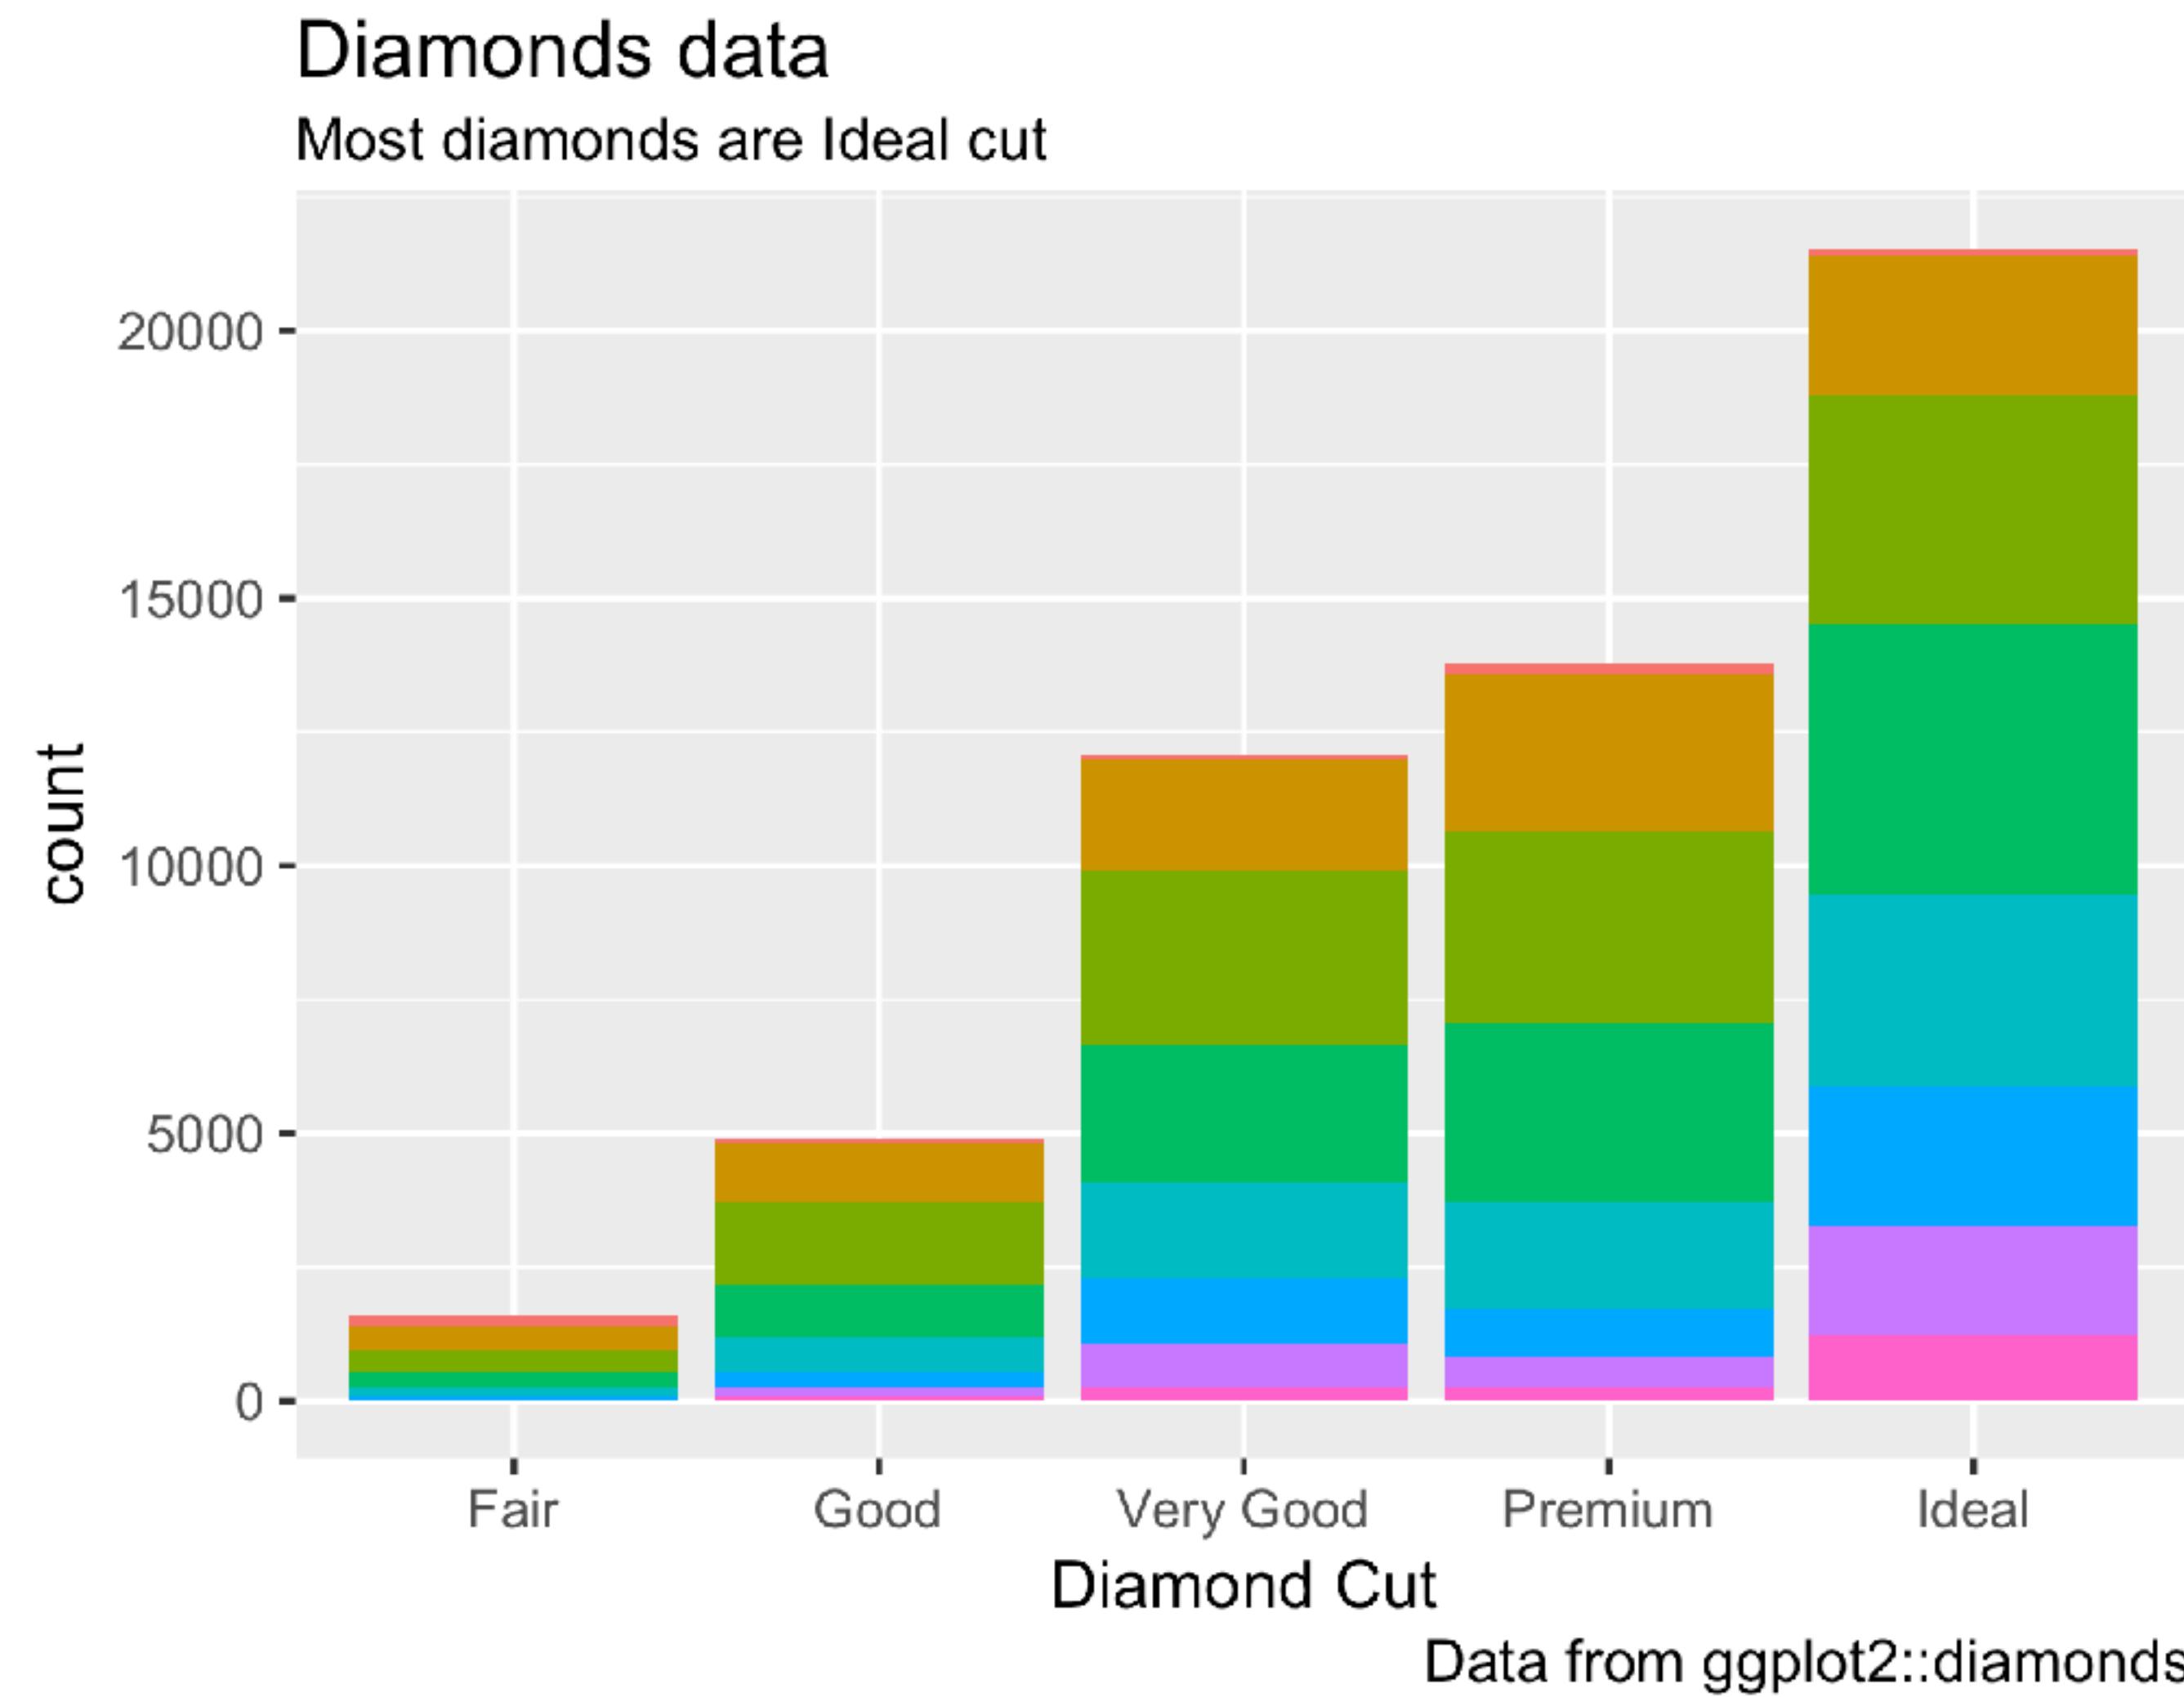

3. **Map** aesthetic
properties to
variables

what else?

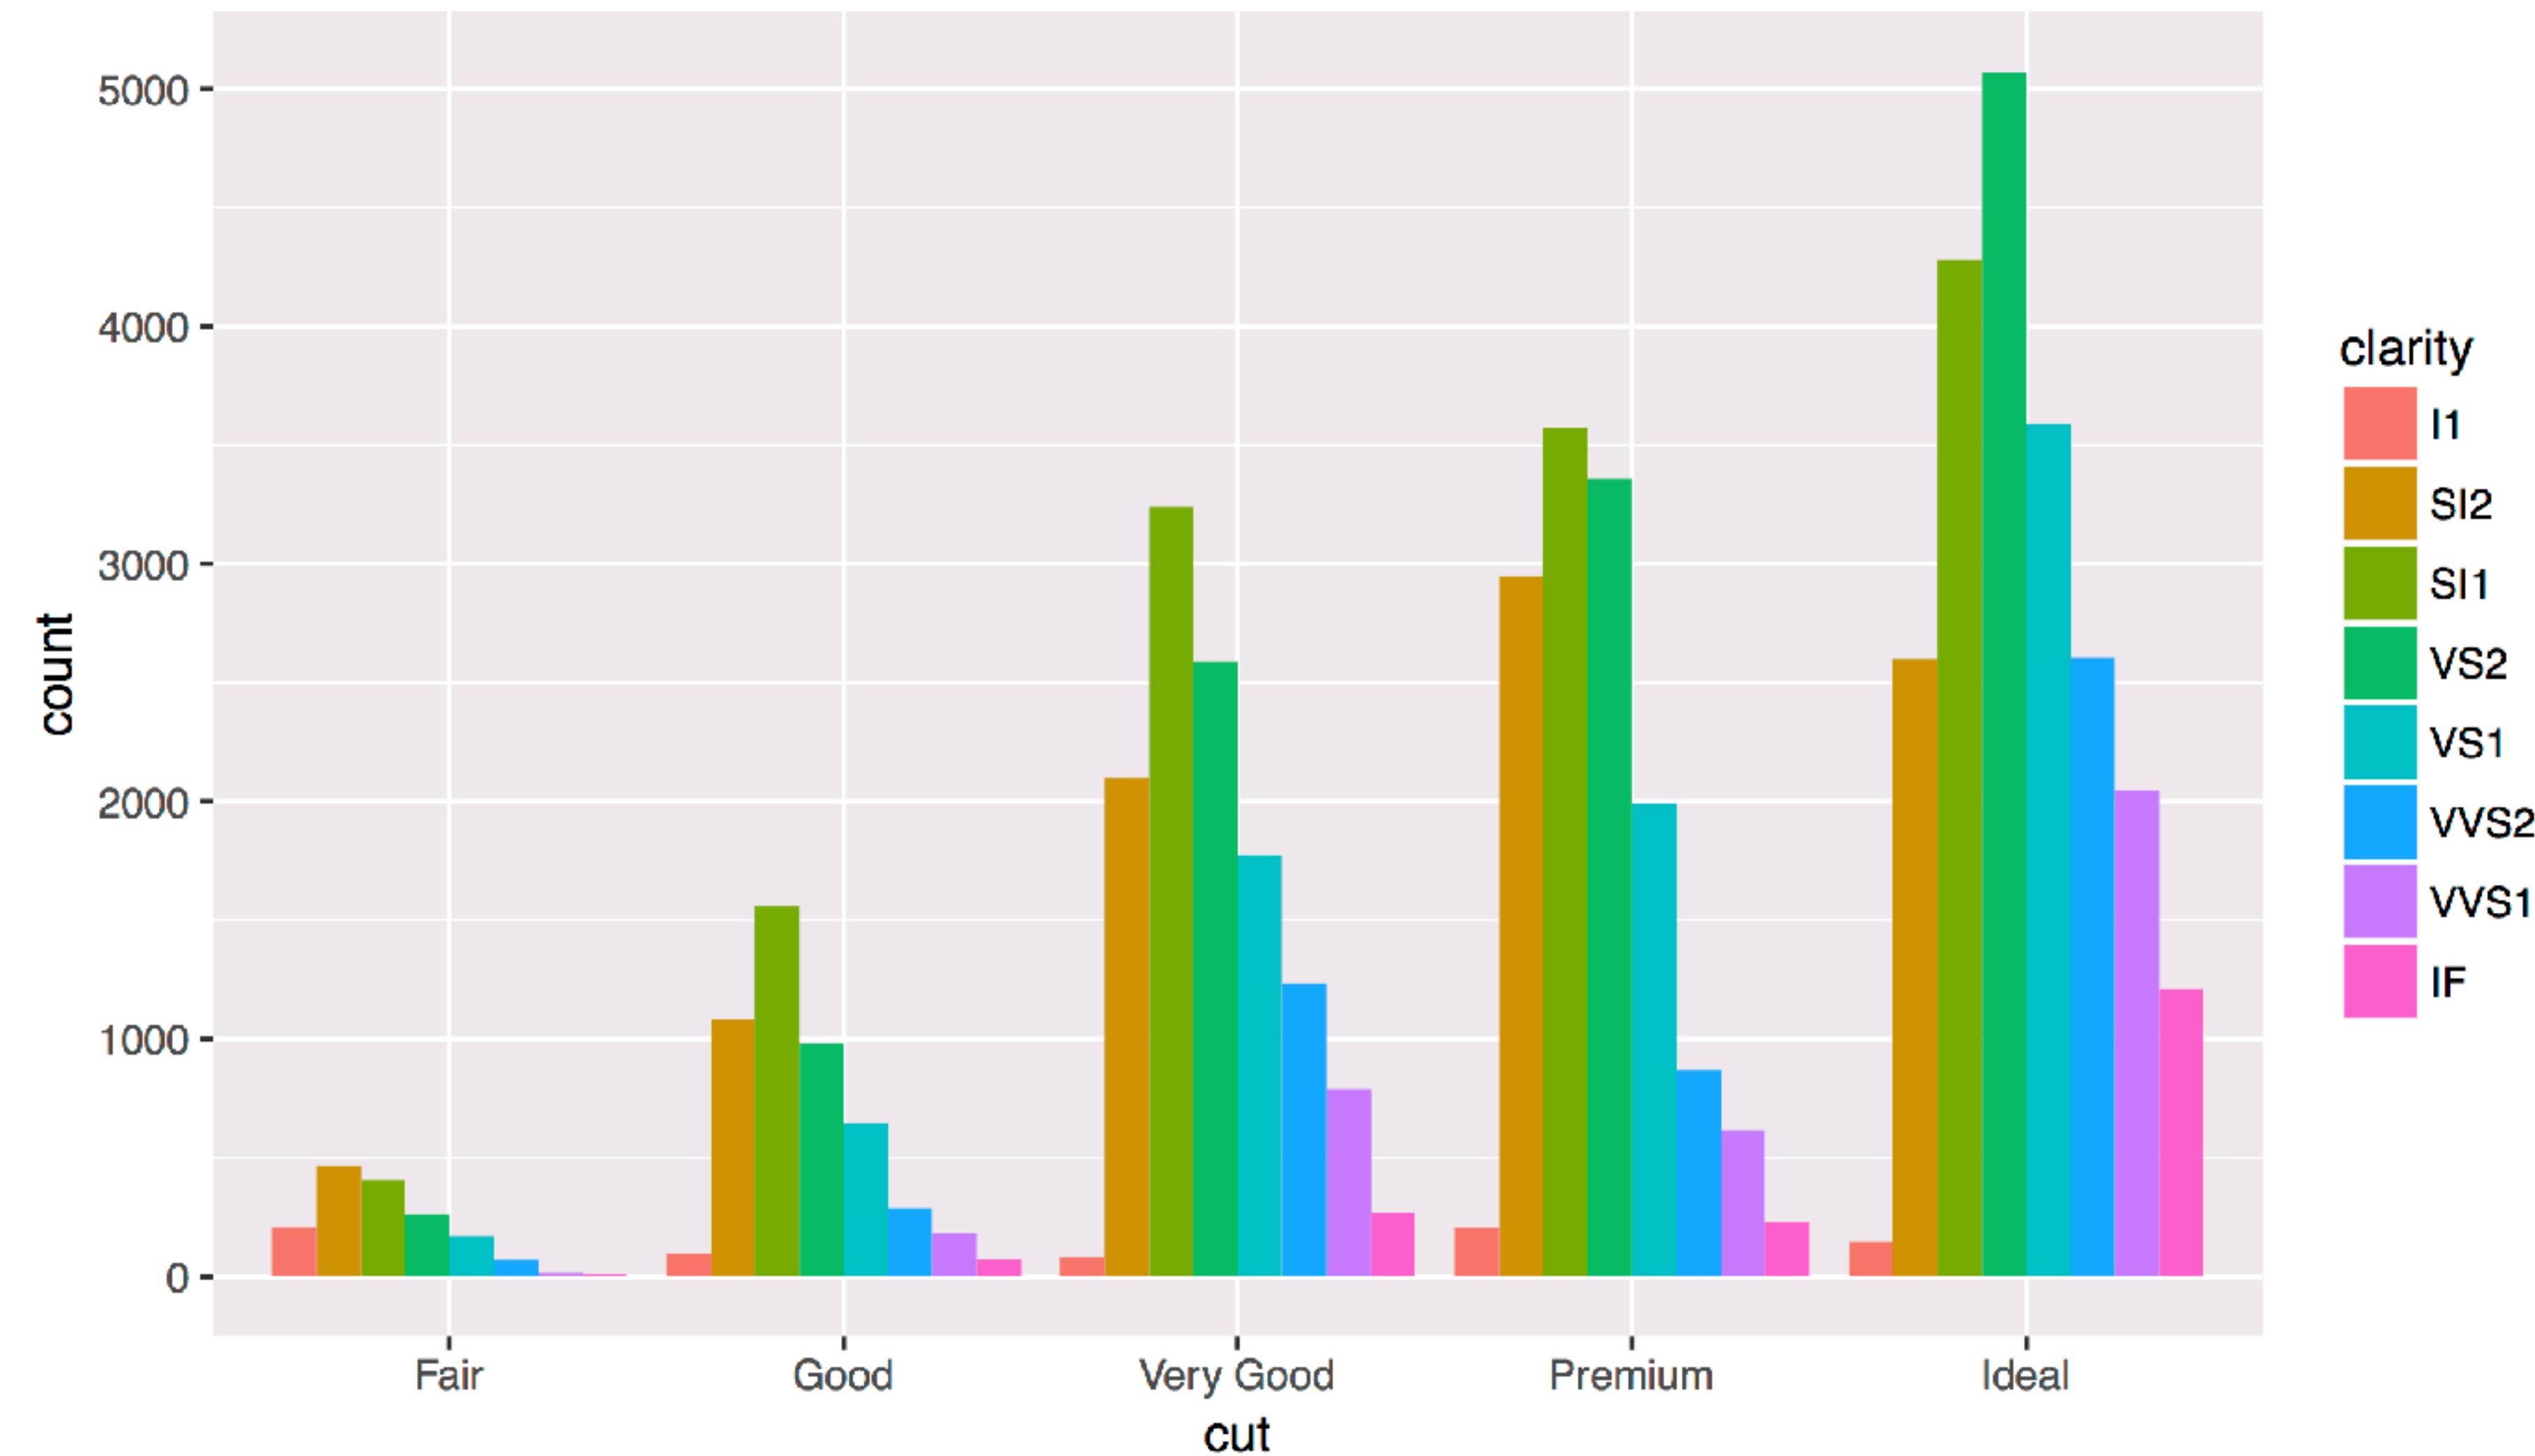

Titles and captions

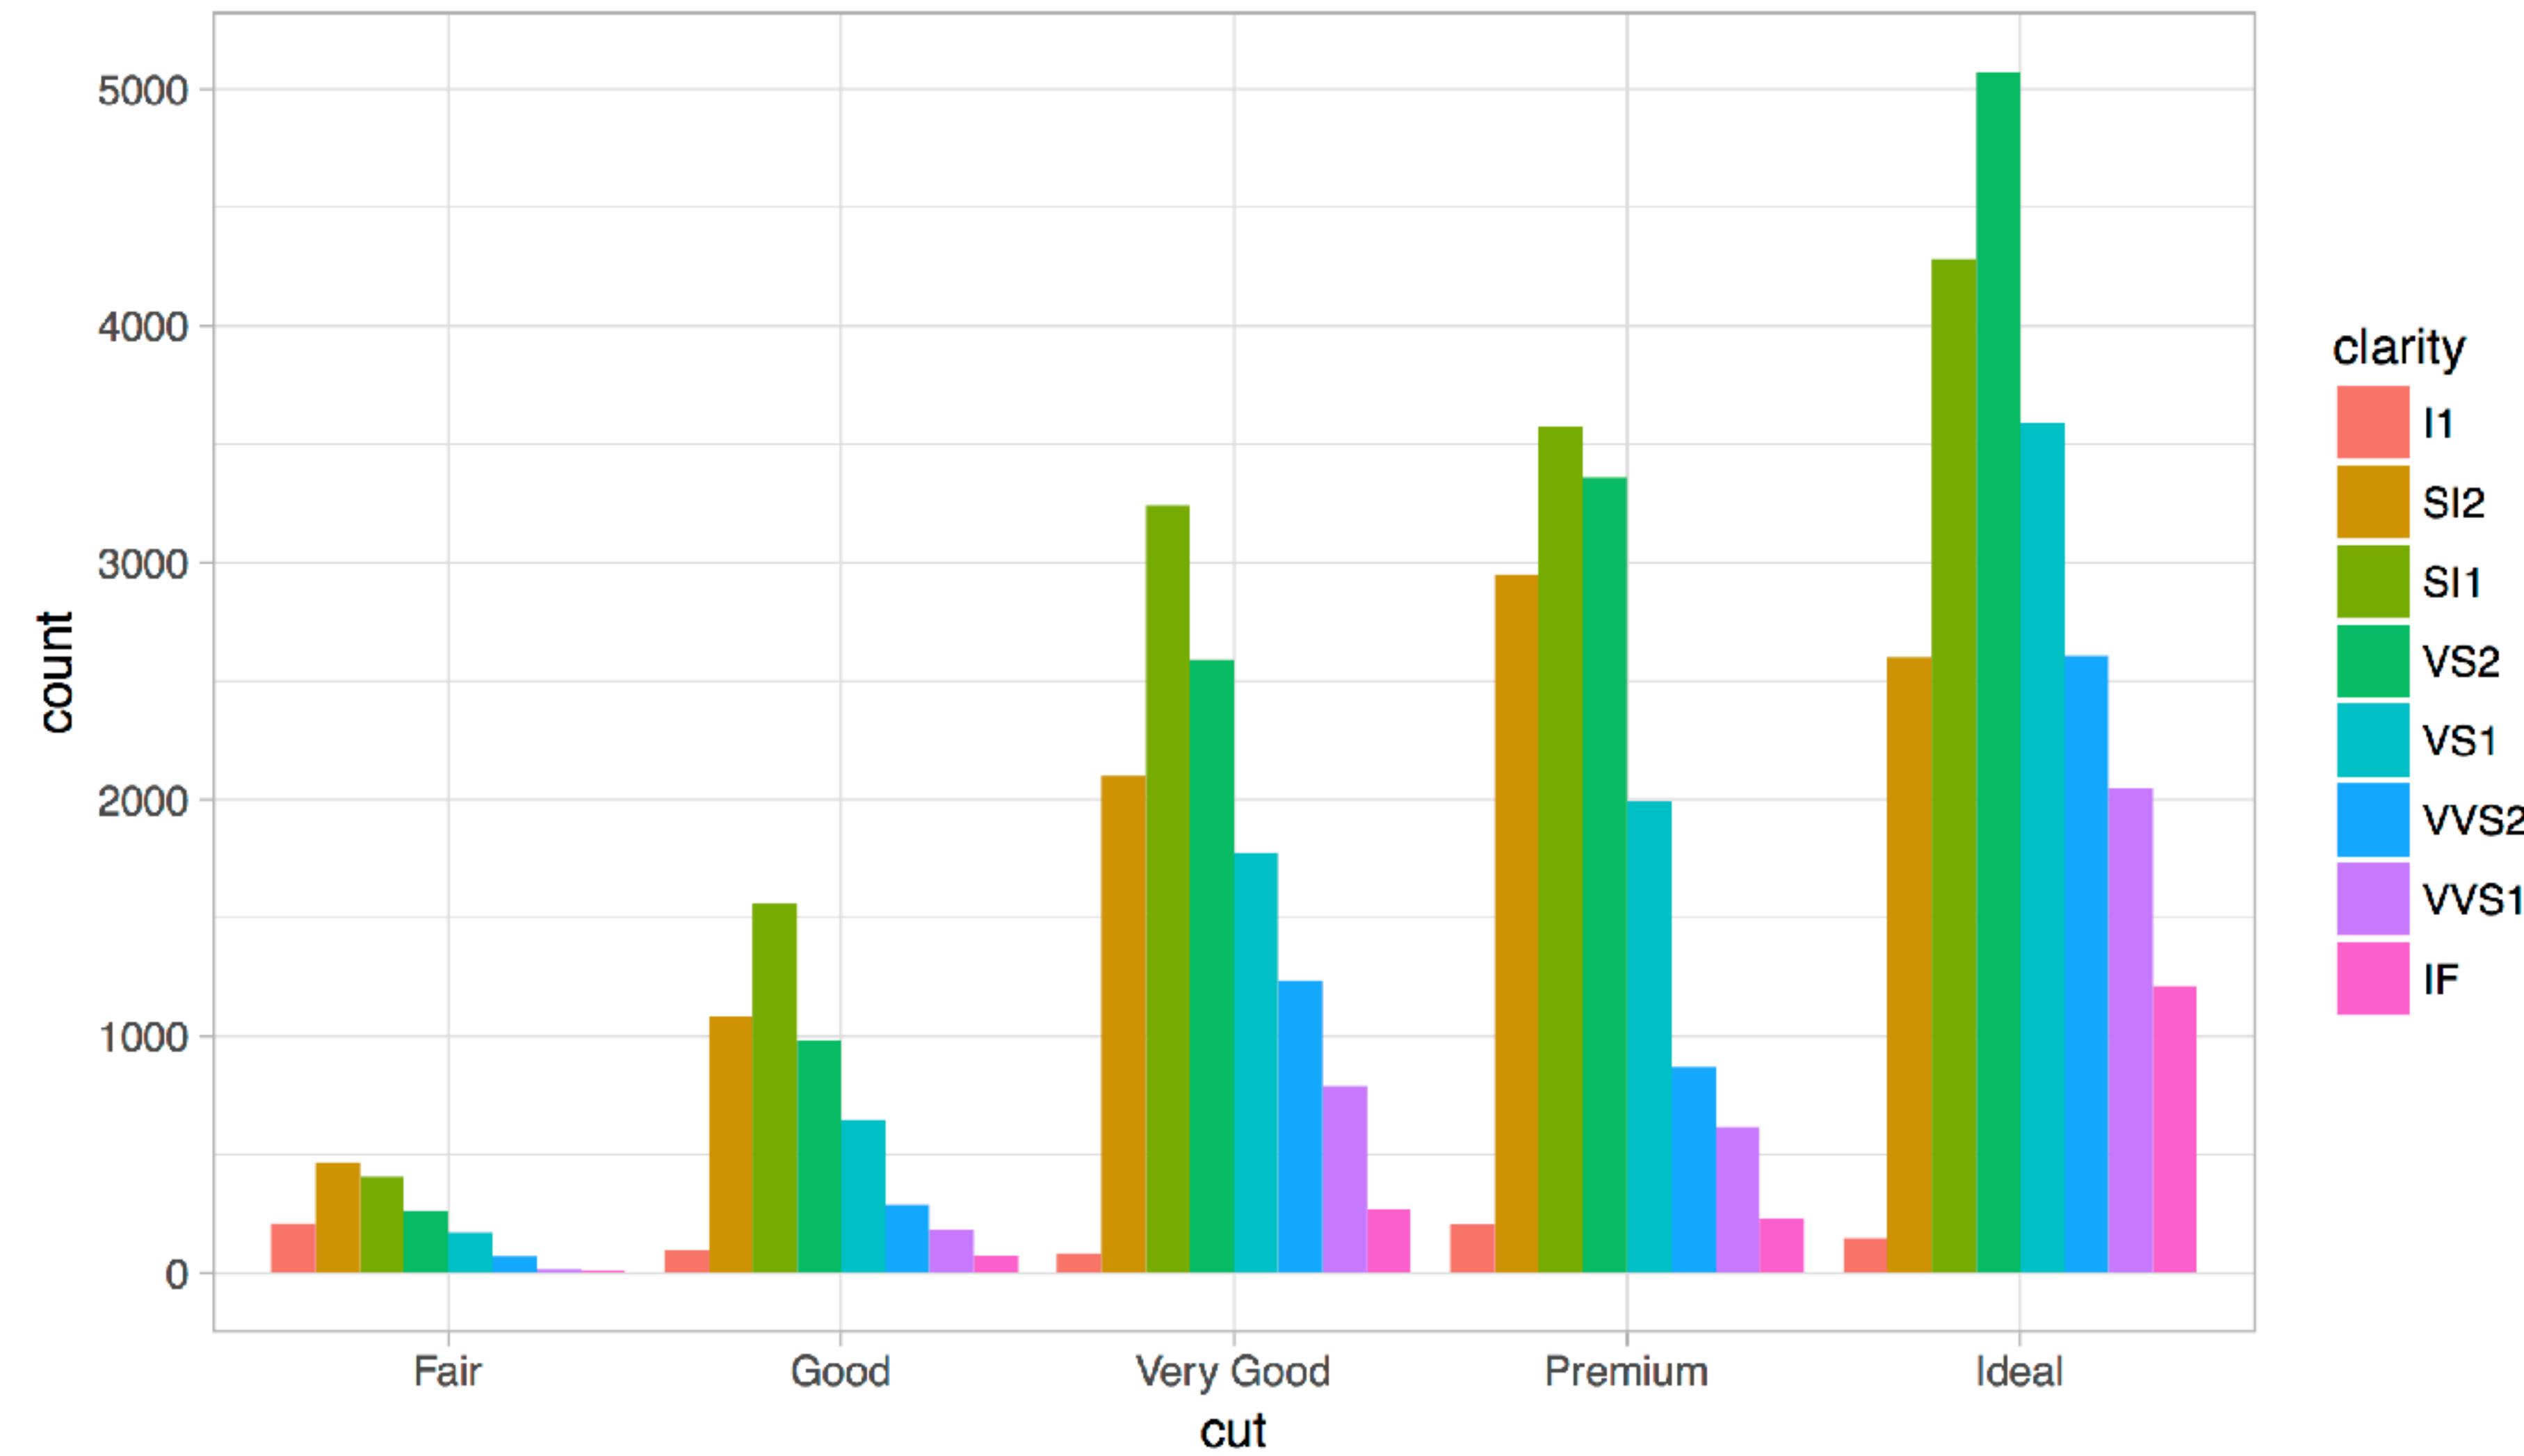

Position Adjustments

How overlapping objects are arranged

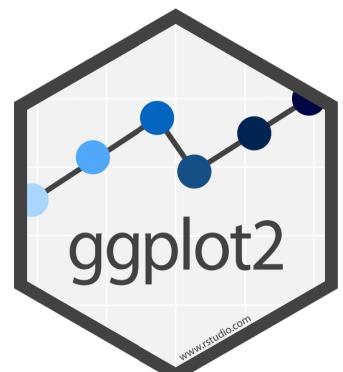

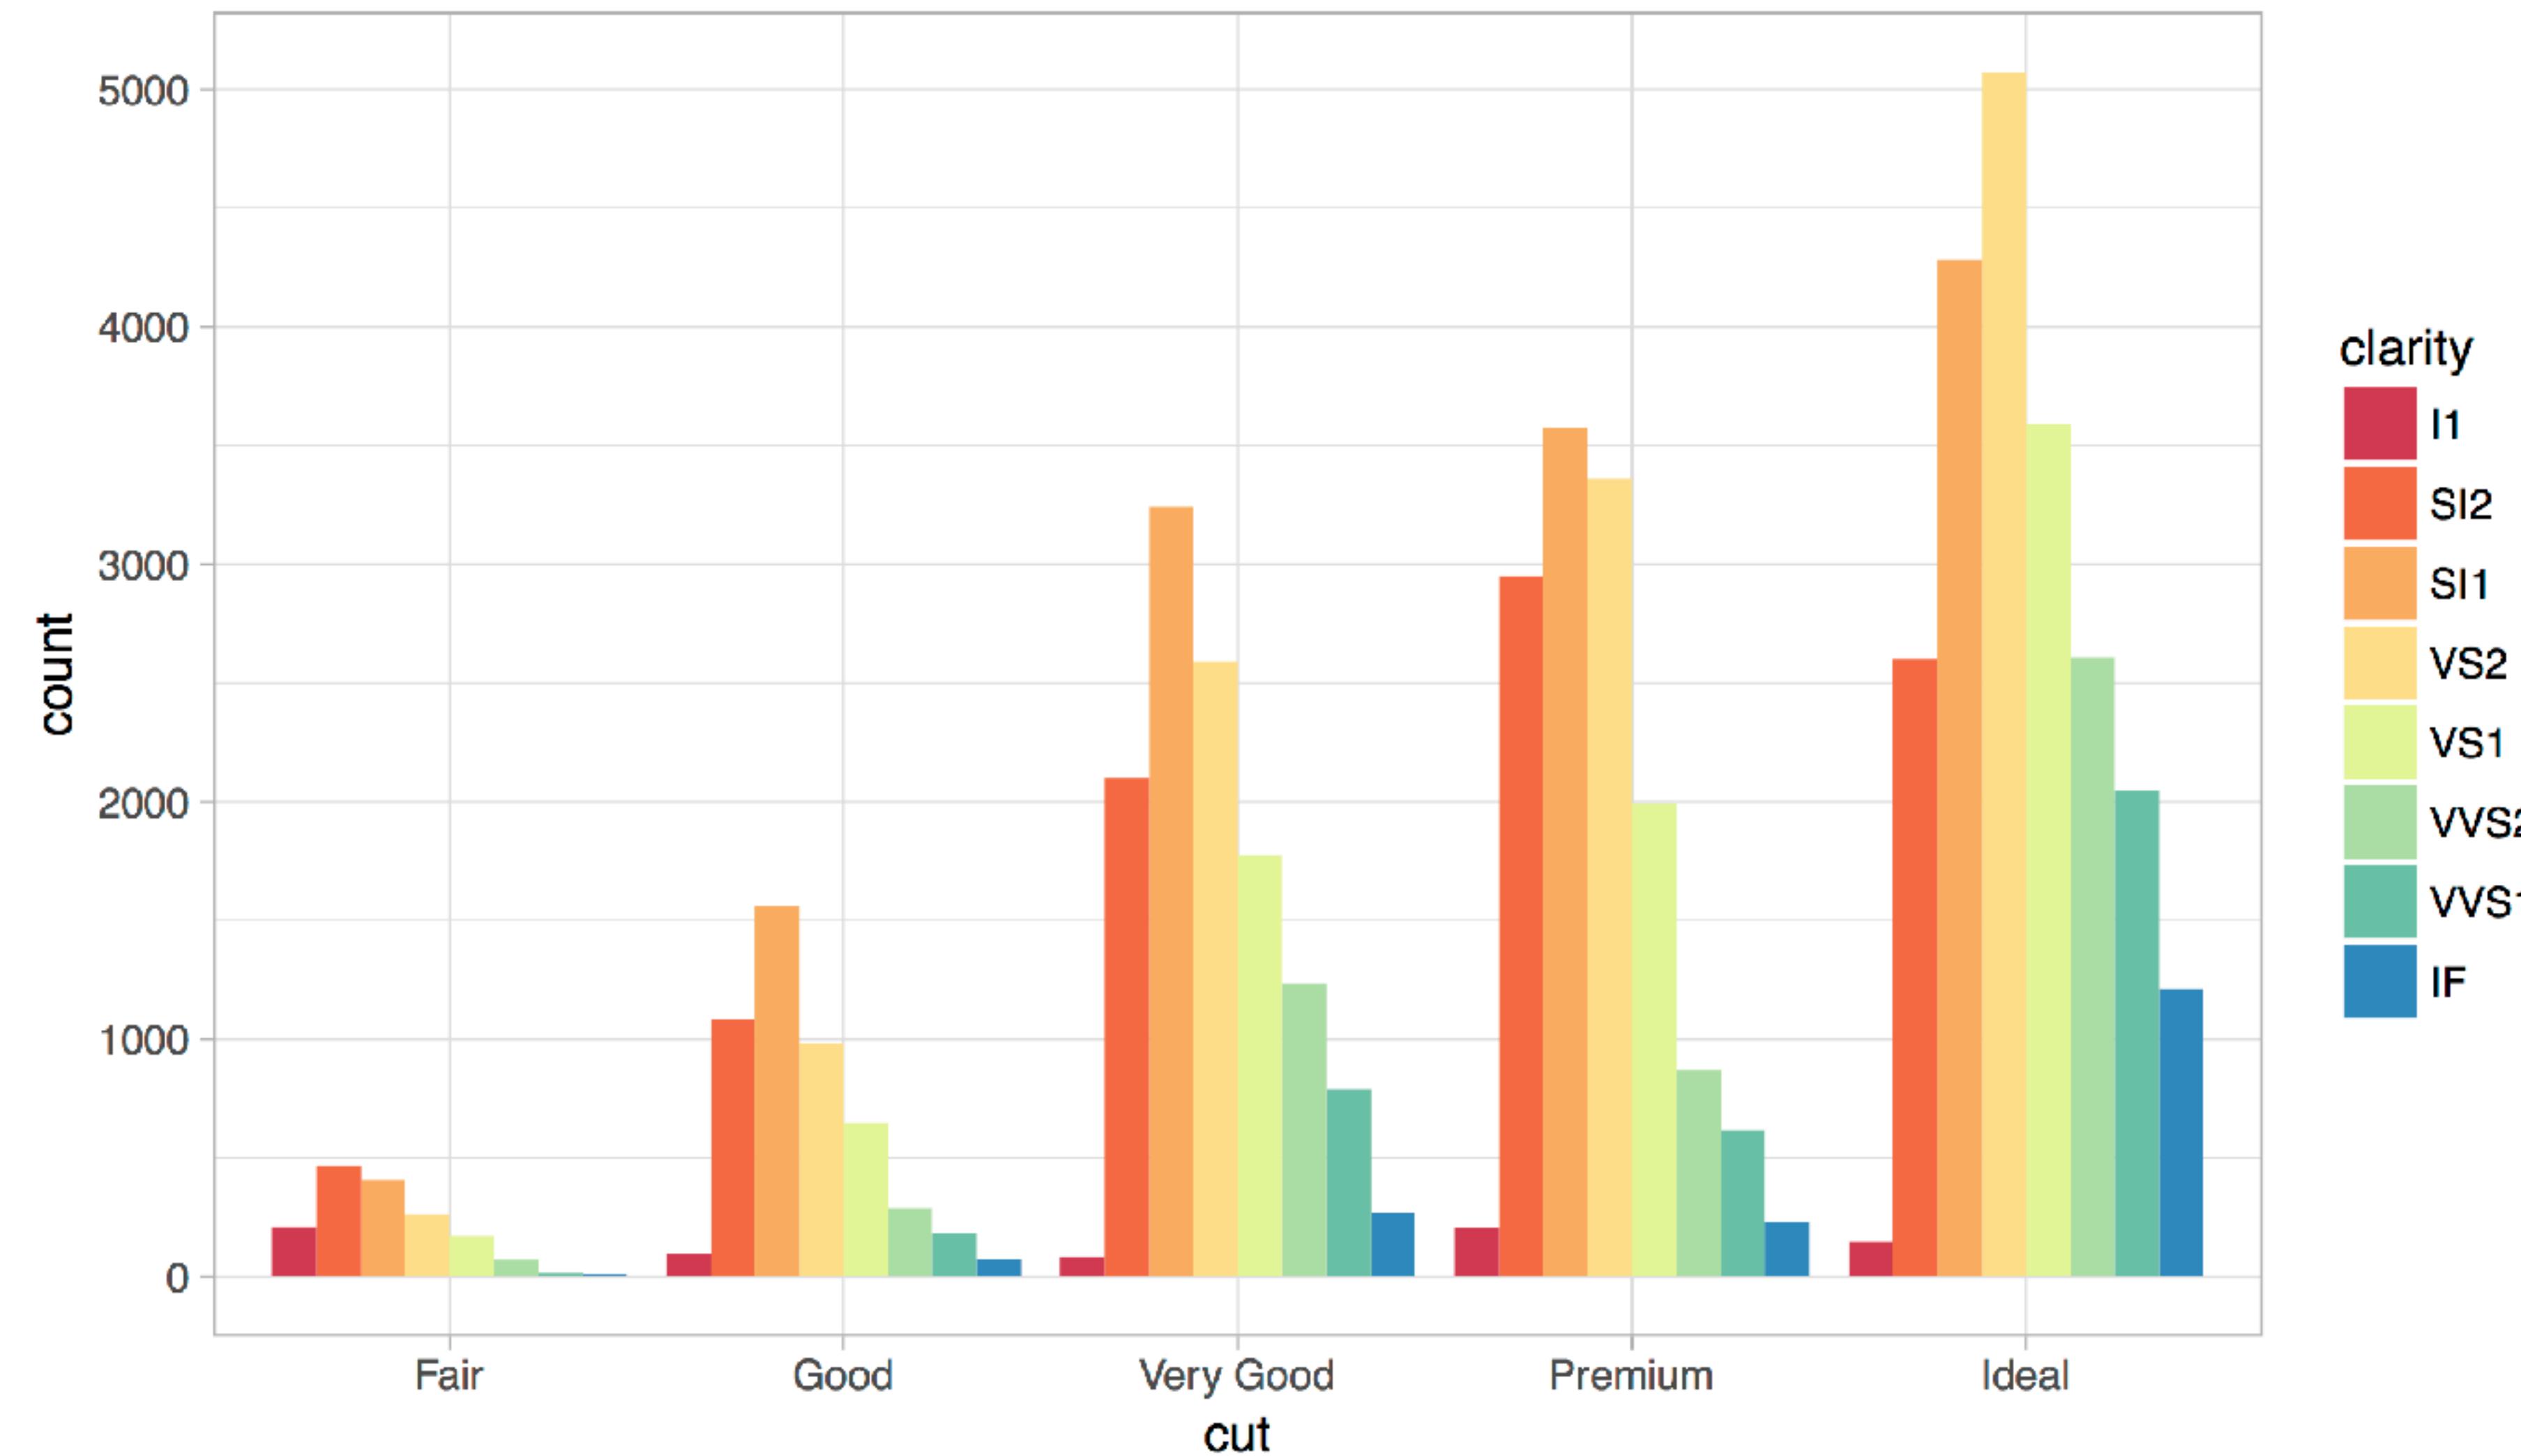

Themes

Visual appearance of non-data elements

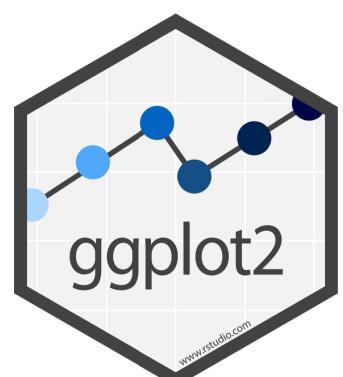

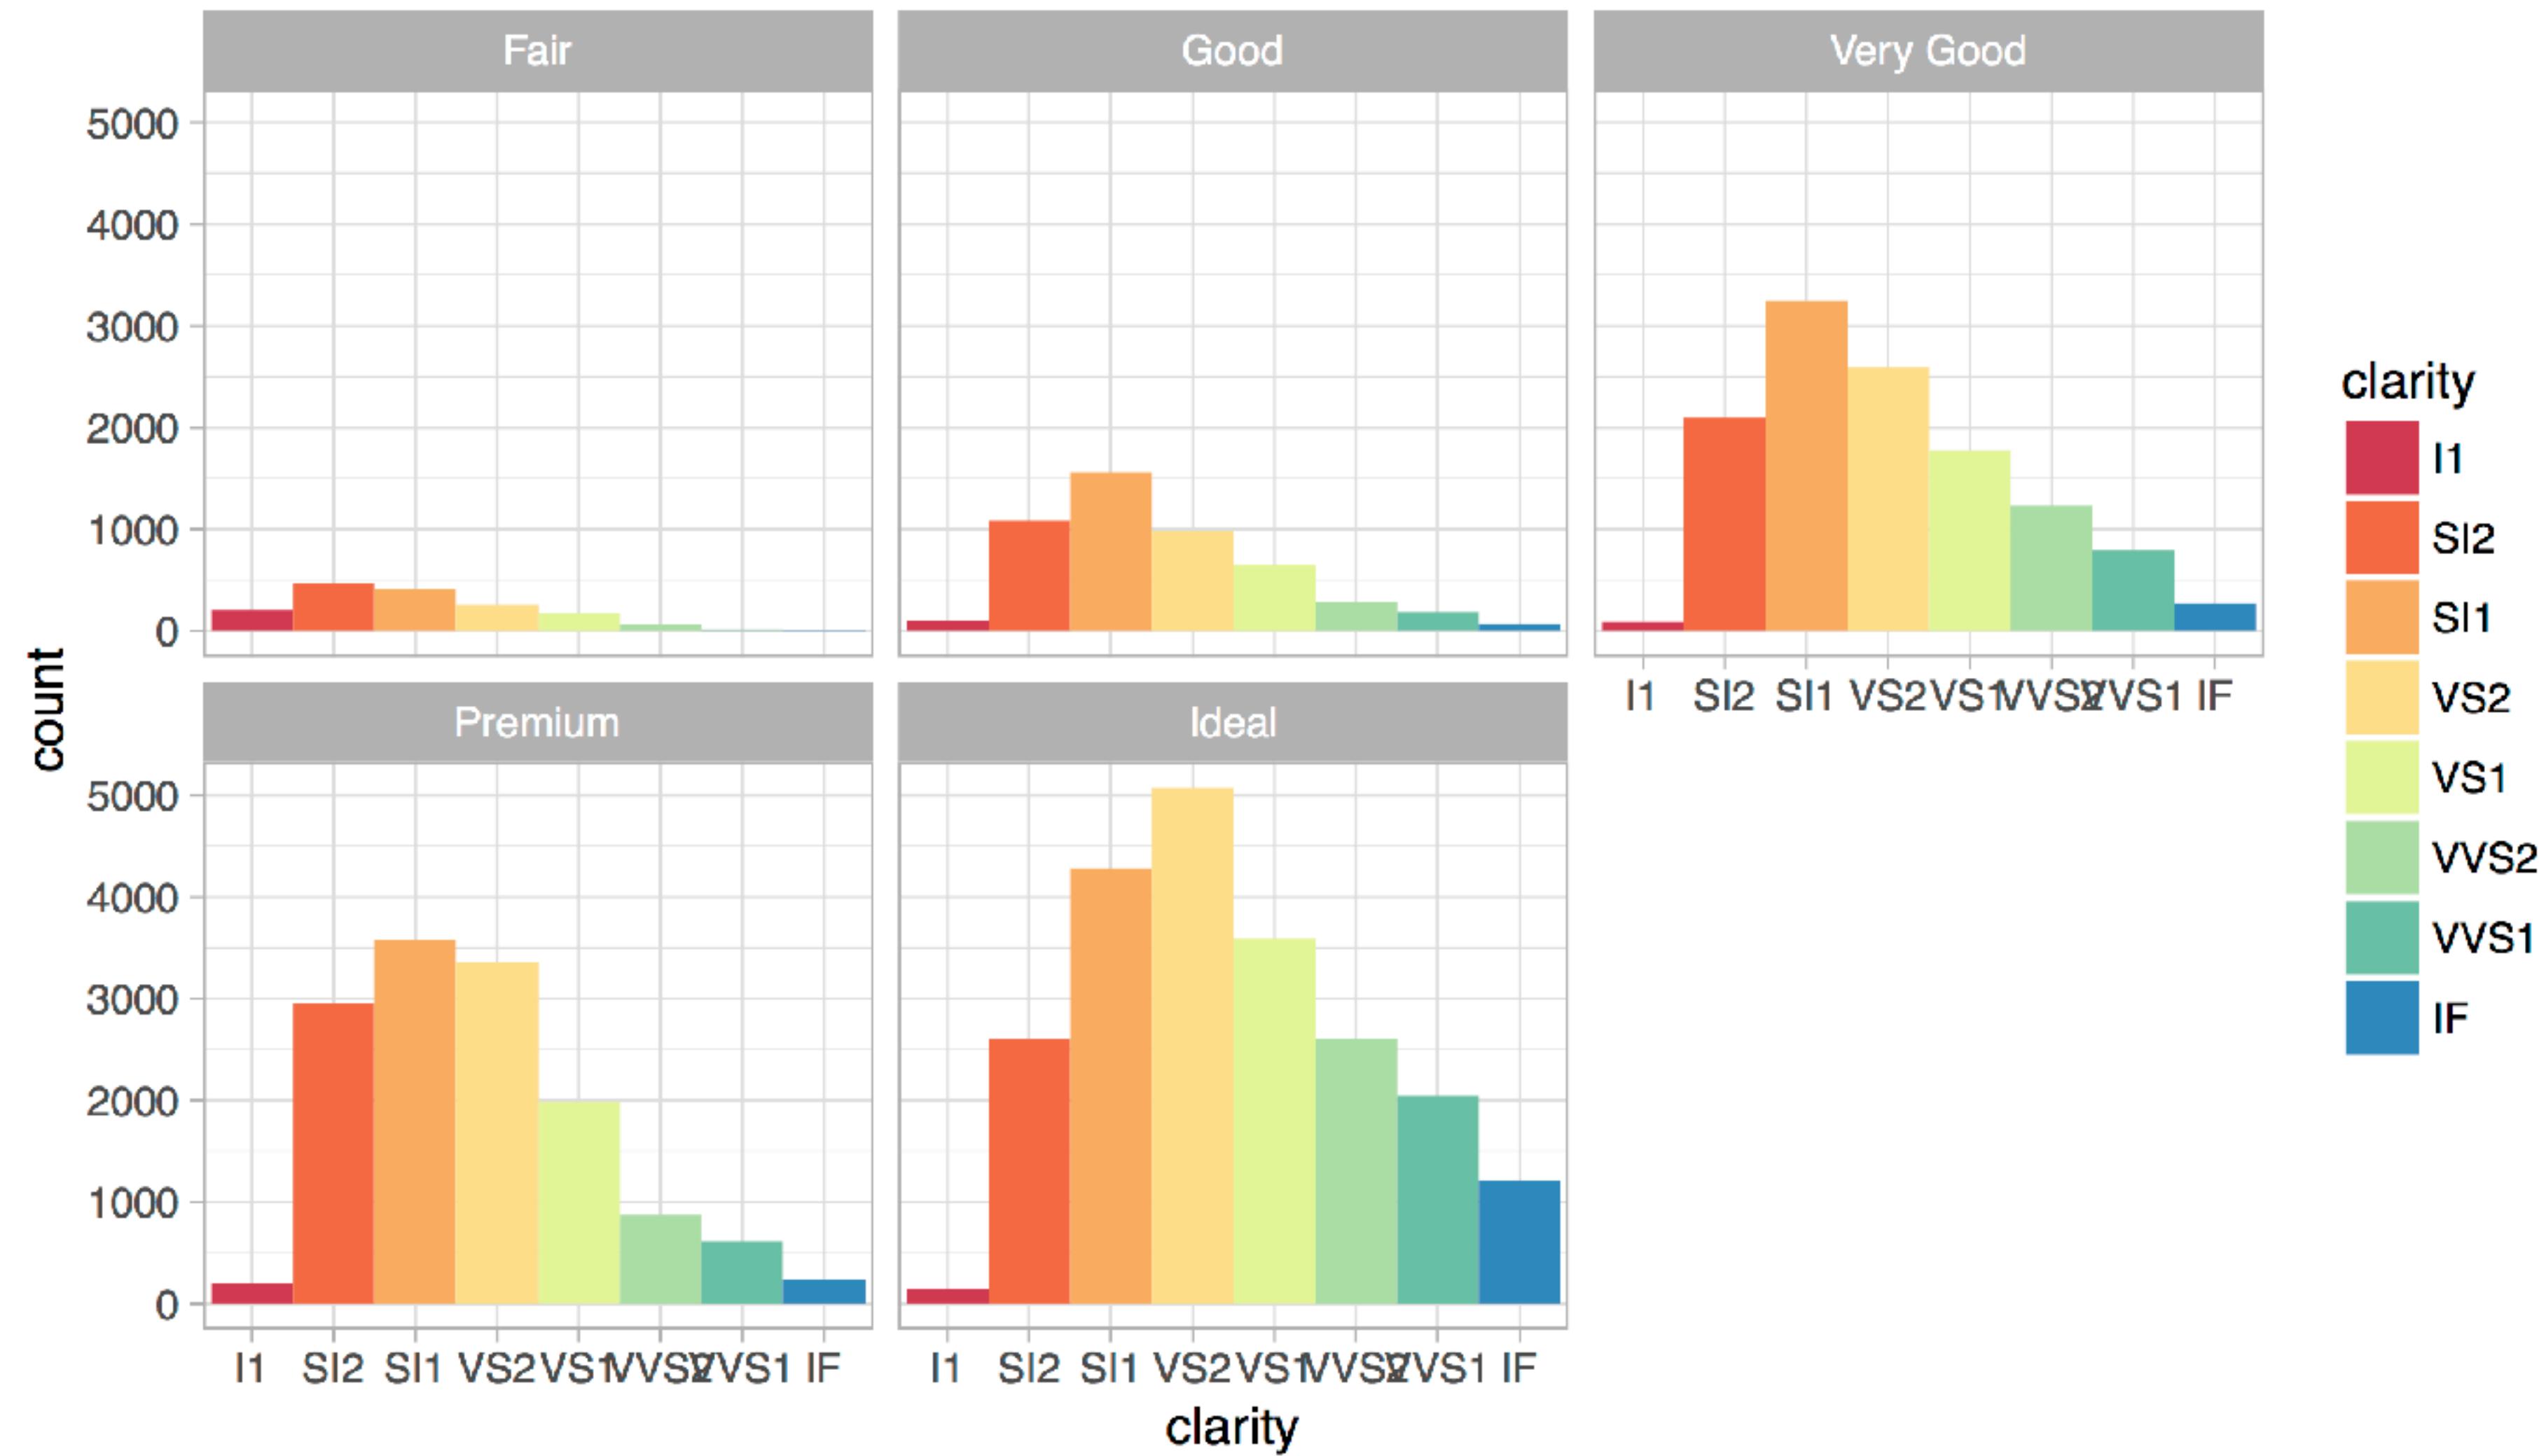

Scales

Customize color scales, other mappings

Facets

Subplots that display subsets of the data.

Coordinate systems

A ggplot2 template

Make any plot by filling in the parameters of this template

Complete the template below to build a graph.

```
ggplot (data = <DATA>) +  
  <GEOM_FUNCTION>(mapping = aes(<MAPPINGS>),  
    stat = <STAT>, position = <POSITION>) +  
  <COORDINATE_FUNCTION> +  
  <FACET_FUNCTION> +  
  <SCALE_FUNCTION> +  
  <THEME_FUNCTION>
```

Not required,
sensible
defaults
supplied

Visualization with ggplot2 :: CHEAT SHEET

The document is organized into several sections:

- Geoms**: Use a geom function to represent data points, use the geom's aesthetic properties to represent variables. Each function returns a layer.
- GRAPHICAL PRIMITIVES**: Functions for basic plotting elements.
- TWO VARIABLES**: Functions for plots with two variables.
- continuous bivariate distribution**: Functions for visualizing distributions of two variables.
- continuous function**: Functions for visualizing continuous functions.
- discrete x , continuous y**: Functions for plots where the x-axis is discrete and the y-axis is continuous.
- discrete x , discrete y**: Functions for plots where both axes are discrete.
- maps**: Functions for creating maps.
- THREE VARIABLES**: Functions for plots involving three variables.

R Studio logo is at the bottom left.

ggplot2.tidyverse.org

The screenshot shows a web browser window with the title "Create Elegant Data Visualisation" and the user "Garrett". The address bar contains "ggplot2.tidyverse.org". The page itself is the ggplot2 homepage, featuring the ggplot2 logo and the text "part of the tidyverse". A large section titled "Usage" explains the philosophy and basic workflow of ggplot2, mentioning the `ggplot()` function and various layers, scales, facets, and coordinate systems. Below this is a code block demonstrating a simple plot:

```
library(ggplot2)

ggplot(mpg, aes(displ, hwy, colour = class)) +
  geom_point()
```

At the bottom of the page is a scatter plot showing the relationship between engine displacement (displ) and fuel economy (hwy) for different car classes. The plot includes a legend indicating that red dots represent "2seater" vehicles.
